|       | Products for Extemporaneous Preparations        |
|       | Vehicles, Solvents or Adjuvants                 |

## 1. ESTABLISHING THE PRICES INDICATED ON THE *LIST OF MEDICATIONS*

The prices indicated on the *List of Medications* are established according to the "guaranteed selling price" concept, in keeping with the manufacturer's commitment and in accordance with the methods of establishing drug prices provided for in section 60 of the Act respecting prescription drug insurance.

However, for certain drugs no price is indicated on the list, in which case the payable price is the pharmacist's cost price. Such drugs may include:

- drugs produced by non-accredited manufacturers but considered unique and essential (identified by the symbol "UE" in the "unit price" column);
- products for extemporaneous preparations;
- solvents, vehicles and adjuvants;
- supplies;
- drugs listed by generic name only, with no brand name or manufacturer's name indicated.

For drugs that have been withdrawn from the market by the manufacturer, the symbol "W" appears in the "unit price" column. These drugs remain payable during the period of validity of this edition, so that existing stocks can be sold.

### 1.1. Guaranteed selling price

The manufacturer's commitment stipulates that the manufacturer must submit a guaranteed selling price, per package size, for any drug it wishes to have included on the *List of Medications*. The number of package sizes is limited to two, and the price submitted must reflect prices for quantities that are multiples of these package sizes.

Where the therapeutic use of more than two package sizes has been established, as in the case of certain drugs such as antibiotics in oral suspensions, ophthalmic solutions, and topical creams and ointments, the manufacturer may submit a guaranteed selling price for each package size.

The guaranteed selling price must remain in effect during the period for which the *List of Medications* is valid.

The guaranteed selling price may differ for sales to pharmacists and sales to wholesalers, in which case the difference between the pharmacist's price and the wholesaler's price must not exceed 6.50% for any package size but may be different for each product in question. For a given product, the difference must be the same for all package sizes. A manufacturer's guaranteed selling price for sales to wholesalers must be the same for all wholesalers.

It should be noted that the guaranteed selling price indicated on the list is the guaranteed selling price for sales to pharmacists.

Manufacturers that have submitted different guaranteed selling prices for sales to pharmacists and sales to wholesalers are listed in Appendix I.

## 2. ESTABLISHING THE PAYABLE PRICE

The price of a drug is the price at which it is sold by an accredited manufacturer or wholesaler. This price is established according to the method described below or, in certain cases, is the maximum price indicated on the list.

## **2.1. Actual purchase price**

The method used to establish the payable price is the **actual purchase price method**.

Under this method, the price paid to a pharmacist is the price indicated on the edition of the list that is valid at the time the prescription is filled, taking into account the source of supply and the package size.

Where the manufacturer's name does not appear on the list, the payable price is the pharmacist's cost price. This is the case, for example, with products considered unique and essential, products for which no brand name or manufacturer's name is indicated, and certain products appearing in the sections entitled *Products for Extemporaneous Preparations, Vehicles, Solvents or Adjuvants and Supplies*.

## **2.2. Lowest price**

The lowest price applies when two or more manufacturers have drugs appearing on the List of Medications that have the same generic name, dosage form and strength.

The lowest price also applies where an exceptional medication, prescribed for a therapeutic indication not set out in this list with regard to this medication, is exceptionally insured under the basic prescription drug insurance plan pursuant to item 6.

### **2.2.1. Lowest price method**

The payable price for drugs with the same generic name, dosage form and strength is that of the brand name whose selling price guaranteed by the manufacturer is the lowest for a given package size.

### **2.2.2. Grouping of dosage forms and strengths**

For the purpose of applying the lowest price method, certain dosage forms or active drug ingredient strengths may be grouped together under the same generic name. In such case, determination of the payable price is based on the corresponding doses.

### **2.2.3. Exceptions to the lowest payable price**

The lowest price method does not apply when the prescriber indicates to the pharmacist:

- (1) not to replace a brand name drug that he or she has prescribed with a generic name drug;
- (2) the reason, among the following, why there must not be any replacement, using for this purpose the Régie-supplied code corresponding to the reason given:
  - the patient suffers from a documented allergy or intolerance to a non-medicinal ingredient present in the makeup of the less costly generic name drug, but absent in the brand name drug;
  - the drug being prescribed is a brand name drug whose dosage form is essential to obtain the expected clinical results, and this drug is the only one appearing on the *List of Medications* in this form.

However, indication of the reason why there must not be any replacement is required only as of 1 June 2015 for prescription renewals done before 24 April 2015 that included the instruction not to replace.

It is not required for prescriptions of azathioprine, mycophenolate mofetil, mycophenolate sodium, sirolimus, tacrolimus or clozapin for persons who, before 1 June 2015, obtained a prescription containing the instructions not to replace.

It is also not required with respect to persons who received a reimbursement for Prograf™ before 1 June 2015 and who received a prescription containing the instruction not to replace before 1 October 2015, this as long as this instruction appears on their subsequent prescriptions.

The lowest price method does not apply to insured persons having obtained a reimbursement for Clozaril™ in the 365 days preceding 21 April 2008.

Likewise, the lowest price method does not apply to the drugs appearing in Appendix V. The drugs in this appendix have one of the following characteristics:

- they are highly toxic or have a narrow therapeutic index;
- their onset of action and absorption rate are clinically important;
- they have a particular pharmaceutical form or a particular use.

Likewise, the lowest price method does not apply to biosimilar drugs.

### **2.3. Maximum amount**

The Minister may establish a maximum payable amount for a drug, in which case the payable price may not exceed the maximum amount indicated on the list.

However, provided that the conditions referred to in 6.5 are fulfilled, the maximum amount indicated on the list for the payment of medications whose billing code is 02244521, 02244522, 02249464 or 02249472 does not apply when a patient suffers from severe dysphagia or is fitted with a nasogastric or gastrojejunal tube and is able to take the medication only if dissolved. In such cases, the payable price is the actual purchase price paid for the medication by the pharmacist.

### **2.4. Accredited drug wholesaler's mark-up**

The drug wholesaler's mark-up is payable only if the drug was actually purchased through an accredited wholesaler. For certain expensive drugs, the mark-up may be limited to a maximum amount, under the terms and conditions described below.

Under this provision, the wholesaler must, in keeping with its commitment, declare the percentage mark-up that it must add exclusively to the manufacturer's guaranteed selling price for drugs appearing on the list during the period for which it is valid, except drugs for which different guaranteed selling prices for sales to wholesalers and sales to pharmacists are submitted.

Accredited drug wholesalers and their mark-ups for the period of validity of the *List of Medications* are listed in Appendix II.

#### **2.4.1. Maximum mark-up**

Under the regulatory provisions, the mark-up on certain expensive drugs may be limited to a maximum amount.

For these drugs, the wholesaler's mark-up is limited to a maximum of \$39. The products to which this measure applies are those whose guaranteed selling price for sales to wholesalers, for the smallest package size or its indivisible multiple, is \$600 or more. The price appearing on the list is the guaranteed selling price for sales to pharmacists and does not include the wholesaler's mark-up.

Products for which the wholesaler's mark-up is limited to \$39 are listed in Appendix III.

#### **2.4.2. Two guaranteed selling prices**

Where a manufacturer has submitted different guaranteed selling prices for sales to wholesalers and sales to pharmacists, the payable price is established as follows:

If the difference between the guaranteed selling prices for sales to wholesalers and sales to pharmacists is equal to or greater than 5%, this difference constitutes the wholesaler's mark-up. The payable price is then the guaranteed selling price for sales to pharmacists, except in the case of expensive products, for which the mark-up is limited to \$39. If the difference between the guaranteed selling prices for sales to wholesalers and sales to pharmacists is less than 5%, the payable price is the guaranteed selling price for sales to wholesalers, increased by the wholesaler's mark-up.

## **2.5. Conditions of supply**

The only products for which pharmacists may bill the Régie are those appearing on the list and purchased through an accredited manufacturer or wholesaler.

When obtaining drug supplies, pharmacists must apply sound management practices and make rational purchases based on the quantity of a drug dispensed over a period of at least 30 days.

## **2.6. Payable price for drugs supplied by institutions**

Under section 37 of the Pharmacy Act (chapter P-10), institutions are authorized to supply drugs to persons other than persons admitted or registered with them. In addition to the responsibilities entrusted to them under the Regulation respecting the application of the Hospital Insurance Act, these institutions may bill the basic prescription drug insurance plan for drugs appearing on the *List of Medications* drawn up by the Minister pursuant to section 60 of the Act respecting prescription drug insurance, where these drugs are supplied to persons insured under the basic plan.

In such cases, the price payable to institutions is the lesser of the actual purchase price and the price established according to the method described in the list.

# **3. EXTEMPORANEOUS PREPARATIONS**

## **3.1. Definition**

An extemporaneous preparation is any drug prepared by a pharmacist from a prescription, as opposed to an official preparation, which is pre-prepared.

## **3.2. Extemporaneous preparations whose cost is covered by the basic prescription drug insurance plan**

The cost of an extemporaneous preparation is covered by the basic plan if the preparation is an extemporaneous mixture of products appearing on the *List of Medications*, is not equivalent to a drug already manufactured, and consists of:

- A systemic-effect preparation manufactured from oral forms of drugs already appearing on the *List of Medications* and consisting of a single active substance.
- A mouthwash preparation resulting from the mixture
  - of two or more of the following drugs in non-injectable form: diphenhydramine hydro-chloride, erythromycin, hydroxyzine, ketoconazole, lidocaine, magnesium hydroxide / aluminum hydroxide, nystatin, sucralfate, tetracycline and a corticosteroid, in association, where applicable, with one or more vehicles, solvents or adjuvants or
  - of an oral form of tranexamic acid with one or more vehicles, solvents or adjuvants.
- A preparation for topical use composed of a mixture of a drug listed in Class 84:00 *Skin and Mucous Membrane Agents* of the *List of Medications* and of one or more of the following products for extemporaneous preparations: salicylic acid, sulfur and tar in association, where applicable, with one or more vehicles, solvents or adjuvants.
- A preparation for topical use composed of one or more of the following products: salicylic acid, erythromycin, sulfur, tar and hydrocortisone in a cream, ethanol, ointment, oil or lotion base, but not a preparation that is only hydrocortisone-based that has a concentration of less than 1%.

- An ophthalmic preparation containing:
  - amikacin, amphotericine B, cefazolin, ceftazidime, fluconazole, mitomycin, penicillin G, vancomycin or
  - tobramycin in concentrations of more than 3 mg/mL or
  - cyclosporine at a concentration of 1% or 2% or
  - interferon alpha-2b or
  - cysteamine.
- A solution or oral suspension of folic acid, dexamethasone, methadone, phytonadione or vancomycin.
- One of the following preparations:
  - a sucralfate-based preparation for rectal use;
  - a topical preparation containing glyceryl trinitrate, nifedipine or diltiazem.
- A preparation for oral use of sodium benzoate.

Products for extemporaneous preparations, as well as vehicles, solvents or adjuvants whose price is payable by the Régie are listed in two special sections of the *List of Medications*.

### **3.3. Payable price**

The method applicable for establishing the payable price for products for extemporaneous preparations is the price indicated on the list. Where no price is indicated, the payable price is the pharmacist's cost price.

## **4. EXCEPTIONAL MEDICATIONS**

### **4.1. Classification of exceptional medications in the List of Medications**

The exceptional medications are grouped together in appendices IV, IV.1 and IV.2 to the list.

Regarding the exceptional medications listed in Appendix IV, the exceptional medications measure is intended to:

- (a) ensure that the cost of drugs classified as exceptional medications be covered by the basic plan only when used for the therapeutic indications recognized by the Institut national d'excellence en santé et en services sociaux.
- (b) permit, on an exceptional basis, the payment of the cost of drugs where they:
  - are considered effective for limited indications, since neither their effectiveness nor the cost of treatment warrants their regular and continuous use for other indications;
  - offer no therapeutic advantages to warrant a higher cost than the cost of using products that have the same pharmacotherapeutic properties and that appear on the list, but where the latter are not tolerated, are contraindicated, or have been rendered ineffective by the patient's clinical condition.

Regarding the exceptional medications listed in Appendix IV.1, the exceptional medications measure is intended, under the basic plan, and according to the conditions set out in sections 4.2.1 and 4.2.2 hereof, to guarantee the cost of drugs having been removed from the *List of Medications* following an end of coverage or not having been re-entered on it.

Regarding the exceptional medications listed in Appendix IV.2, the exceptional medications measure is intended, under the basic plan and according to the conditions set out in section 4.2.3 hereof, to guarantee the cost of drugs having been removed from the *List of Medications* following an end of coverage or not having been re-entered on it, without a particular therapeutic indication.

## **4.2. Conditions of coverage under the basic prescription drug insurance plan**

### **4.2.1. Medications listed in appendices IV and IV.1**

The exceptional medications listed in appendices IV and IV.1 are insured under the basic plan where the following conditions are fulfilled:

- (1) in the case of persons whose coverage under the basic plan is provided by the Régie de l'assurance maladie du Québec, a prior request for authorization, duly completed in accordance with the form prescribed to that effect in the Regulation respecting the terms and conditions for the issuance of health insurance cards and the transmittal of statements of fees and claims (chapter A-29, r. 7.2) was sent to the Régie;
- (2) in the case of persons whose basic plan coverage is provided by insurers transacting group insurance or by administrators of private-sector employee benefit plans, a prior request for authorization, if required under the applicable group insurance contract or employee benefit plan, was sent to the insurer or to the administrator of the employee benefit plan, according to the terms and conditions provided for in that contract or plan.

However, these drugs are covered only for the period authorized, if applicable, by the Régie, the insurer or the administrator of the employee benefit plan in question, if they are prescribed for the therapeutic indications provided for each of them.

### **4.2.2. Medications listed in Appendix IV.1**

The exceptional medications listed in Appendix IV.1 are insured under the basic plan where the following conditions are also fulfilled:

For the reimbursement of Enbrel™ S.C. Inj. Sol. (syr) 50 mg/mL and Enbrel™ SureClick™ S.C. Inj. Sol. 50 mg/mL,

- (1) in the case of rheumatoid arthritis and ankylosing spondylitis, the eligible person must have begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 18 August 2017 and fulfil the payment indications set out in Appendix IV.1.
- (2) in the case of juvenile idiopathic arthritis, the eligible person must have begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 1 February 2018 and fulfil the payment indications set out in Appendix IV.1.
- (3) in cases of moderate or severe psoriatic arthritis of the rheumatoid type or of a type other than rheumatoid or a severe form of chronic plaque psoriasis, the eligible person must have begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 19 August 2020 and fulfil the payment indications set out in Appendix IV.1.

For the reimbursement of Lantus™ S.C. Inj. Sol. 100U/ml (3 ml) and Lantus™ Solostar™ S.C. Inj. Sol. 100U/ml (3 ml), the eligible person must have begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of the employee benefit plan before 18 August 2017 and fulfil the payment indications set out in Appendix IV.1.

For the reimbursement of Copaxone™ S.C. Inj. Sol (syr) 20 mg/mL (1 mL), the eligible person must have begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of the employee benefit plan before 5 July 2018 and fulfil the payment indications set out in Appendix IV.1.

For the reimbursement of Neupogen™ Inj. Sol. 300 mcg/mL (1.0mL) and Neupogen Inj. Sol. 300 mcg/mL (1.6mL), the eligible person must have begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of the employee benefit plan before 30 September 2020 and fulfil the payment indications set out in Appendix IV.1 without there having been an interruption in the pharmacological treatment.

For the reimbursement of Remicade™, the eligible person must have begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 19 August 2020 and fulfil the payment indications set out in Appendix IV.1.

For the reimbursement of Rituxan™ I.V. Perf. Sol. 10 mg/ml, the eligible person must have begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 30 September 2020 and fulfil the payment indications set out in Appendix IV.1.

#### **4.2.3. Medications listed in Appendix IV.2**

The medications removed from the *List of Medications*, indicated in Appendix IV.2, are insured under the basic plan where the following conditions are also fulfilled:

For the reimbursement of Guepe (Polistes Spp.) (DIN 01948970) and Vespides combines (DIN 01948873), where the eligible person has begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of the employee benefit plan for one of these products in the six months preceding 15 February 2017.

For the reimbursement of Blood Glucose Test Strips (reactive quantitative) D360 Blood Glucose Test Strips (DIN 99101469), Dario (DIN 99101227), GlucoDr (DIN 99101165), iTest (DIN 99100332), Nova-Max (DIN 99100497), On Call Vivid (DIN 99101314), On-Call Plus (DIN 99100479) and TRUEtest (DIN 99100714), where the eligible person has begun a treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan for one of these products in the 12 months preceding 3 February 2021.

### **5. SUPPLIES**

The *List of Medications* may include certain supplies considered by the Minister to be essential for the administration of prescription drugs. Supplies whose cost is covered by the basic plan appear on the list in the sections entitled *Supplies* and *Vehicles, Solvents or Adjuvants*.

#### **5.1. Payable price**

The method used to establish the payable price for supplies is the method described in the *List of Medications*. Where no price is indicated, the payable price for supplies is the pharmacist's cost price.

### **6. CONDITIONS, CASES AND CIRCUMSTANCES ON OR IN WHICH THE COST OF ANY OTHER MEDICATION IS COVERED BY THE BASIC PLAN, EXCEPT THE MEDICATIONS OR CLASSES OF MEDICATIONS SPECIFIED BELOW**

#### **6.1. Objective**

The purpose of this measure is to provide for the payment, in exceptional circumstances, of a medication that is not on the list or an exceptional medication prescribed for a therapeutic indication not specified on the list for that medication, on or in the conditions, cases and circumstances described below, and to provide for coverage under the basic prescription drug insurance plan of the cost of the medication and the cost of the pharmaceutical services provided by a pharmacist to an eligible person.

## **6.2. Conditions, cases and circumstances**

### **6.2.1. Conditions**

A medication not appearing on the list or an exceptional medication that is prescribed for a therapeutic indication not specified on the list for that medication is covered by the basic prescription drug insurance plan on an exceptional basis when no other pharmacological treatment specified on the list or no other medical treatment whose cost is covered under the Health Insurance Act (chapter A-29) can be considered because the treatment is contraindicated, there is significant intolerance to the treatment, or the treatment has been rendered ineffective due to the clinical condition of the eligible person.

That medication must:

- (1) be manufactured and marketed in Canada and, subject to the fourth paragraph of this section, have been assigned a DIN by Health Canada;  
or
- (2) be manufactured and marketed in Canada and have an NPN assigned by Health Canada, on condition that the medication already had been assigned a DIN by the same authority;  
or
- (3) be an extemporaneous preparation consisting of ingredients marketed in Canada, on condition that there are no medications marketed in Canada of the same form and strength, containing the same ingredients;  
or
- (4) be a sterile preparation made by a pharmacist from sterile pharmaceutical products marketed in Canada, at least one of which is not specified on the list for parenteral administration or ophthalmic use, on condition that there are no preparations marketed in Canada of the same form and strength, containing the same ingredients.

The medication is covered by the basic plan if it satisfies every condition specified for both of the following criteria:

- (1) severity of the medical condition;  
and
- (2) chronicity, treatment of an acute infection, and palliative care.

An exceptional medication referred to in Appendix IV may be covered by the basic plan even if it has not been assigned a DIN by Health Canada, insofar as its coverage is not subject to any exclusion set out in the list.

#### **6.2.1.1. Severity of the medical condition**

The medication is to be used to treat a severe medical condition of an eligible person for whom there is a specific necessity of an exceptional nature to use the medication, recorded in the person's medical file.

"Severe medical condition" means a symptom, illness or severe complication arising from the illness with consequences that pose a serious health threat, such as significant physical or psychological injury, with a high probability that the person will require the use of a number of services in the health network such as frequent medical services or hospitalization if the medication is not administered, and whose severity is, as the case may be:

- (1) immediate, in that it already severely restricts the afflicted person's activities or quality of life or would, according to the current state of scientific knowledge, lead to significant functional injury or the person's death;  
or

- (2) foreseeable in the short term, in that its evolution or complications could affect the eligible person's morbidity or mortality risk.

If, however, the consequences of the severe medical condition are significant functional psychological injury, the injury must be immediate and as a consequence already severely restrict the eligible person's activities or quality of life.

#### **6.2.1.2. Chronicity, treatment of an acute severe infection, and palliative care**

The medication is to be used, as the case may be:

- (1) to treat a chronic medical condition or a complication or manifestation arising from the chronic medical condition provided its degree of severity satisfies subparagraph 1 or 2 of the second paragraph of section 6.2.1.1;
- (2) to treat an acute severe infection;
- (3) notwithstanding the degree of severity criteria in section 6.2.1.1, to provide for the administration of a medication required for final phase ambulatory palliative care in the case of a terminal illness.

#### **6.3. Exclusions**

Despite the conditions being satisfied for coverage by the basic plan under section 6.2.1 as a medication not on the List or as an exceptional medication prescribed for a therapeutic indication not specified on the list for that medication, a request for payment authorization must be denied for the following medications:

- (1) (Deleted);
- (2) medications prescribed for aesthetic or cosmetic purposes;
- (3) medications prescribed to treat alopecia or baldness;
- (4) medications prescribed to treat erectile dysfunction;
- (5) medications prescribed to treat obesity;
- (6) medications prescribed for cachexia and to stimulate appetite;
- (7) oxygen;
- (8) medications prescribed to treat persons suffering from chronic hepatitis C without hepatic fibrosis (Metavir score of F0 or equivalent) or having mild hepatic fibrosis (Metavir score of F1 or equivalent) and not showing any poor prognostic factor.

A request for payment authorization must also be denied regarding a medication for which the Minister has issued a notice of suspension or end of insurance coverage or which he or she has not re-entered on the List of medications, unless the Minister has maintained the insurance coverage of that medication with respect to persons undergoing pharmacological treatment in the following cases:

- (1) For the reimbursement of Lantus™ S.C. Inj. Sol. 100U/mL (3 mL) and Lantus™ Solostar™ S.C. Inj. Sol. (3 mL), the eligible person must have begun the treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 18 August 2017 and continue fulfilling the conditions set out in section 6.2.1;
- (2) For the reimbursement of Copaxone™ S.C. Inj. Sol. (syr) 20 mg/mL (1 mL), the eligible person must have begun the treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 5 July 2018 and continue fulfilling the conditions set out in section 6.2.1;

- (3) For the reimbursement of Neupogen™ Inj. Sol. 300 mcg/ml (1.0 mL) and Neupogen™ Inj. Sol. 300 mcg/ml (1.6 mL), the eligible person must have begun the treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 30 September 2020 and continue fulfilling the conditions set out in section 6.2.1 without there having been an interruption in the pharmacological treatment;
- (4) For the reimbursement of Enbrel™ S.C. Inj. Sol. (syr) 50 mg/mL and Enbrel™ SureClick™ S.C. Inj. Sol. 50 mg/mL, the eligible person must have begun the treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 19 August 2020 and continue fulfilling the conditions set out in section 6.2.1.
- (5) For the reimbursement of Rituxan™ I.V. Perf. Sol. 10 mg/ml, the eligible person must have begun the treatment and received a reimbursement from the Régie or an insurer or via the administrator of an employee benefit plan before 30 September 2020 and continue fulfilling the conditions set out in section 6.2.1.

#### **6.4. Payable price**

Except in the cases specified in the second paragraph of section 2.2, the price of a medication referred to in this section is the actual purchase price paid for the medication by the pharmacist.

#### **6.5. Payment authorization and duration of authorization**

The prescriber must send:

- (1) to the Régie de l'assurance maladie du Québec, in the case of persons whose basic plan coverage is provided by the Régie, a request for prior authorization on the duly completed form provided by the Régie;
- (2) to the insurer or administrator of the employee benefit plan, in the case of persons whose basic plan coverage is provided by insurers transacting group insurance or by administrators of private-sector employee benefit plans, if it is required by the applicable group insurance contract or benefit plan, a prior request for authorization duly completed in accordance with the terms and conditions of the contract or plan, as the case may be.

If the request is accepted, the medication for which payment authorization is sought is covered only for the period authorized by the Régie, by the insurer or by the administrator of the employee benefit plan, as the case may be.

### **7. EXCEPTIONS TO THE TEMPORARY EXCLUSION OF A MEDICATION FROM COVERAGE UNDER THE BASIC PRESCRIPTION DRUG INSURANCE PLAN**

The temporary exclusion of a medication provided in section 60.0.2 of the Act respecting prescription drug insurance (chapter A-29.01), for the purpose of making a listing agreement, does not apply to a person for whom the seriousness of his or her medical condition is such, on the date that the request for payment authorization was sent to the Régie in accordance with section 6.5, that the taking of the medication may not be delayed beyond 30 days of this date without it resulting in complications leading to an irreversible deterioration of the person's condition or the person's death. In addition, the prescriber must demonstrate that the beneficial clinical effects expected of this medication for this person are medically recognized on the basis of scientific data.

Concerning requests for payment authorization being processed or awaiting processing on the date of coming into force of the notice of temporary exclusion of a medication, the 30-day period beyond which the taking of the medication may not be delayed is calculated from the date of coming into force of this notice.

As well, this exclusion does not apply to a person who received acceptance of payment for this medication at any time before the date of publication of the notice of exclusion.

## **8. PROTON PUMP INHIBITORS (PPI)**

For persons age 18 and over, proton pump inhibitors (PPI) are covered under the basic plan only for the duration determined below, according to the specific conditions or pathologies presented by the insured persons:

- (1) for a maximum duration of 90 days of treatment, consecutive or not, per 12-month period beginning the date of the delivery of the PPI, in the case of: uninvestigated dyspepsia or dyspepsia with no lesions identified during the investigation, with or without gastroesophageal reflux, *Helicobacter pylori* positive or a gastric or duodenal ulcer being predominant symptoms;
- (2) for a maximum duration of 12 months of treatment, where code PP12 is indicated on the prescription, in the case of: secondary dyspepsia associated with the taking of non-steroidal anti-inflammatory drugs, cytoprotective prophylaxis, pregnancy, the wearing of a nasogastric tube or gastrojejunal tube, or a short bowel;
- (3) for a maximum duration of 12 months of treatment, where code PP205 is indicated on the prescription, in the case of: uninvestigated dyspepsia or dyspepsia with no lesions identified during the investigation, functional dyspepsia responding to PPIs, eosinophilic gastroenteritis, a hypersensitive oesophagus or extradigestive symptoms responding to PPIs and recurring if usage is stopped, if the symptoms of gastroesophageal reflux reappear after the initial treatment provided for in paragraph 1 and are present at least three days per week;
- (4) for a maximum duration of 24 months of treatment, where code PP999 is indicated on the prescription, in the case of: Barrett's esophagus, Zollinger-Ellison syndrome, an esophageal peptic stricture, eosinophilic esophagitis, Crohn's disease of the upper digestive tract, the taking of pancreatic enzymes not having the desired effectiveness due to their inactivation by gastric acidity, Cameron ulcers, neoplastic ulcers associated with chronic bleeding or the digestive hemorrhage of a lesion of the stomach or esophagus, antral vascular ectasia, recurring erosive esophagitis, a recurring idiopathic peptic ulcer in the absence of *helicobacter pylori* or the taking of anti-inflammatory drugs, a gastrostomy that leaks around the stoma or a Schatzki ring.

The maximum duration of treatment indicated in subparagraphs 2, 3 and 4 is renewable if the pathology or particular condition remains present at the end of the treatment.

However, until 4 October 2017, the first paragraph does not apply to persons undergoing treatment between 2 November 2016 and 2 May 2017.

## **9. MAXIMUM NUMBER OF BLOOD GLUCOSE TEST STRIPS (REACTIVE QUANTITATIVE)**

The maximum number of strips covered by the basic plan, per 365-day period, from the date of the first delivery after 2 May 2017, depends on which of the following situations applies to the person:

- (1) For a person suffering from diabetes and being treated:
  - (a) with insulin or pregnant, 3 000 strips;
  - (b) with repaglinide or a sulfonylurea, 400 strips;
  - (c) with an antidiabetic other than insulin, repaglinide or a sulfonylurea or not being treated with an antidiabetic, 200 strips.
- (2) for a person taking insulin not referred to in the 5th paragraph of item 9, 3 000 strips.

However, this quantity is increased by 100 strips where a person referred to in paragraphs (b) and (c) of subparagraph 1 and in subparagraph 2 of the first paragraph is in one of the following situations:

- (1) has not attained the glycemic targets determined by his or her physician during three months or more;
- (2) has an acute illness or a comorbidity or underwent a medical or surgical intervention that could have an impact on the person's glycemic control;
- (3) is starting a new pharmacotherapy known for its hypoglycemic or hyperglycemic effects;
- (4) presents risks of drug interactions that may have an impact on the person's glycemic control;
- (5) his or her work or occupation requires, according to a legally authorized person involved in the care of this person, a tighter glycemic control for his or her own safety and for that of the public;
- (6) has Type 2 diabetes, is not undergoing insulin therapy and is planning to become pregnant.

In the case where the maximum number of strips is reached before the end of the 365-day period, an additional 100 strips is also covered by the basic plan for a person referred to below, where a legally authorized person involved in the care of this person establishes, given his or her situation, that the maximum number of strips to which the person is entitled proves insufficient:

- (1) a person referred to in the second paragraph;
- (2) a person referred to in paragraph a) of subparagraph 1 and in subparagraph 2 of the first paragraph who is in the same situation as the person referred to in the second paragraph.

This additional quantity of strips is renewable as long as it is warranted by the person's situation during the 365-day period.

The maximum number of strips for which payment is covered by the basic plan is unlimited during the entire duration of the prescription for any person not suffering from diabetes who is in one of the following clinical situations entailing a risk of potentially serious symptomatic hypoglycemia:

- (1) a case under investigation or a confirmed case of congenital disease of the category of innate metabolic errors, of gluconeogenesis disorder, or of another metabolic disease severely affecting the glucose reserves and requiring a dietary adjustment according to the glycemic measure;
- (2) a case under investigation or a confirmed case of congenital or acquired disease characterized by hyperinsulinism;
- (3) a case under investigation or a confirmed case of congenital or acquired endocrine disease characterized by an imbalance or deficiency in hormones participating in the regulation of glycemia;
- (4) a case under investigation or a confirmed case of dumping syndrome causing postprandial hypoglycemia, despite an adjusted diet;
- (5) a case where the person regularly takes a drug that modulates the action of hypoglycemic or hyperglycemic hormones and has an objectively supported and documented history of hypoglycemia.

## APPENDIX I

### MANUFACTURERS THAT HAVE SUBMITTED DIFFERENT GUARANTEED SELLING PRICES FOR WHOLESALERS AND PHARMACISTS

| Manufacturer |                                         | Difference between pharmacist's<br>GSP and wholesaler's GSP |
|--------------|-----------------------------------------|-------------------------------------------------------------|
| Ara Pharm    | Ara Pharmaceuticals                     | 3%                                                          |
| Atlas        | Laboratoire Atlas Inc.                  | 5,65%, 5,71%, 5,66%, 5,7%                                   |
| * Bionime    | Bionime Corporation                     | 5,66%                                                       |
| Cellchem     | Cellchem Pharmaceuticals Inc.           | 6,5%                                                        |

LIST OF EXCEPTIONAL MEDICATIONS  
WITH RECOGNIZED INDICATIONS FOR PAYMENT

ABATACEPT, I.V. Perf. Pd.:

- ◆ for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be methotrexate at a dose of 20 mg or more per week.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a period of 12 months.

Authorizations for abatacept are given for three doses of 10 mg/kg every two weeks, then for 10 mg/kg every four weeks.

- ◆ for treatment of moderate or severe juvenile idiopathic arthritis (juvenile rheumatoid arthritis and juvenile chronic arthritis) of the polyarticular or systemic type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have five or more joints with active synovitis and one of the following two elements must be present:
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with methotrexate at a dose of 15 mg/m<sup>2</sup> or more (maximum dose of 20 mg) per week for at least three months, unless there is intolerance or a contraindication.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following six elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - an decrease of 0.13 in the Childhood Health Assessment Questionnaire (CHAQ) score or a return to school;
  - an improvement of at least 20% in the physician's overall assessment (visual analogue scale);
  - an improvement of at least 20% in the person's or parent's overall assessment (visual analogue scale);
  - a decrease of 20% or more in the number of affected joints with limited movement.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for abatacept are given for 10 mg/kg every two weeks for three doses, then for 10 mg/kg every four weeks.

ABATACEPT, S.C. Inj. Sol. (syr):

- ◆ for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis, and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be methotrexate at a dose of 20 mg or more per week.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for abatacept S.C. Inj. Sol. (syr) are given for a dose of 125 mg per week.

ABIRATERONE ACETATE:

- ◆ in association with prednisone for treatment of metastatic castration-resistant prostate cancer in persons:
  - who are asymptomatic or mildly symptomatic after an anti-androgen treatment has failed;
- and
- who have never received docetaxel-based chemotherapy;
- and

- whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

It must be noted that abiraterone is not authorized after failure with an androgen synthesis inhibitor or a second-generation androgen receptor inhibitor if it was administered for treatment of prostate cancer.

- ◆ in association with prednisone, for treatment of metastatic castration-resistant prostate cancer in persons:
  - whose disease has progressed during or following docetaxel-based chemotherapy, unless there is a contraindication or a serious intolerance;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

It must be noted that abiraterone is not authorized after failure with an androgen synthesis inhibitor or a second-generation androgen receptor inhibitor if it was administered for treatment of prostate cancer.

Abiraterone remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 10 July 2019, insofar as the physician provides evidence of a beneficial clinical effect by the absence of disease progression.

#### ABOBOTULINUMTOXINA:

- ◆ for treatment of cervical dystonia and other severe spasticity conditions.

#### ★ ACAMPOSATE:

- ◆ to maintain abstinence in persons suffering from alcohol dependency who have abstained from alcohol for at least 5 days and who are taking part in a full alcohol management program centred on alcohol abstinence.

The maximum duration of each authorization is three months. When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by maintained alcohol abstinence. The total maximum duration of treatment is 12 months.

#### ADALIMUMAB:

- ◆ for treatment of moderate or severe rheumatoid arthritis or of moderate or severe psoriatic arthritis of the rheumatoid type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor for rheumatoid arthritis only;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be:

for rheumatoid arthritis:

- methotrexate at a dose of 20 mg or more per week;

for psoriatic arthritis of the rheumatoid type:

- methotrexate at a dose of 20 mg or more per week;

or

- sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

For rheumatoid arthritis, authorizations for adalimumab are given for a dose of 40 mg every two weeks. However, after 12 weeks of treatment with adalimumab as monotherapy, an authorization may be given for 40 mg per week.

For psoriatic arthritis of the rheumatoid type, authorizations for adalimumab are given for a dose of 40 mg every two weeks.

- ◆ for treatment of moderate or severe psoriatic arthritis of a type other than rheumatoid.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have at least three joints with active synovitis and a score of more than 1 on the Health Assessment Questionnaire (HAQ);
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be:
    - methotrexate at a dose of 20 mg or more per week;
- or
- sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for adalimumab are given for a dose of 40 mg every two weeks.

- ◆ for treatment of persons suffering from moderate or severe ankylosing spondylitis whose BASDAI score is  $\geq 4$  on a scale of 0 to 10 and in whom the sequential use of two non-steroidal anti-inflammatories at the optimal dose for a period of three months each did not adequately control the disease, unless there is a contraindication.
  - Upon the initial request, the physician must provide the following information:
    - the BASDAI score;
    - the degree of functional injury according to the BASFI (scale of 0 to 10).

The initial request will be authorized for a maximum of five months.

- When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:
  - a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;or
  - a decrease of 1.5 points or 43% on the BASFI scale;or
  - a return to work.

Requests for continuation of treatment will be authorized for maximum periods of 12 months.

Authorizations for adalimumab are given for a maximum of 40 mg every two weeks.

- ◆ for treatment of moderate or severe intestinal Crohn's disease that is still active despite treatment with corticosteroids and immunosuppressors, unless there is a contraindication or major intolerance to corticosteroids. An immunosuppressor must have been tried for at least eight weeks.

Upon the initial request, the physician must indicate the immunosuppressor used as well as the duration of treatment. The initial request is authorized for a maximum of three months, which includes induction treatment at the rate of 160 mg initially and 80 mg on the second week, followed by maintenance treatment with a dosage of 40 mg every two weeks.

Upon subsequent requests, the physician must provide evidence of a beneficial clinical effect. Requests for continuation of treatment will be authorized for a maximum period of 12 months.

However, if the medical condition justifies increasing the dosage to 40 mg per week as of the 12th week of treatment, authorization will be given for a maximum period of three months. After which, for subsequent authorizations renewals, lasting a maximum of 12 months, the physician will have to demonstrate the clinical benefits obtained with this dosage.

- ◆ for treatment of moderate or severe intestinal Crohn's disease that is still active despite treatment with corticosteroids, unless there is a contraindication or major intolerance to corticosteroids, where immunosuppressors are contraindicated or not tolerated, or where they have been ineffective in the past during a similar episode after treatment combined with corticosteroids.

Upon the initial request, the physician must indicate the nature of the contraindication or the intolerance as well as the immunosuppressor used. The initial request is authorized for a maximum of three months, which includes induction treatment at the rate of 160 mg initially and 80 mg on the second week, followed by maintenance treatment with a dosage of 40 mg every two weeks.

Upon subsequent requests, the physician must provide evidence of a beneficial clinical effect. Requests for continuation of treatment will be authorized for a maximum period of 12 months.

However, if the medical condition justifies increasing the dosage to 40 mg per week as of the 12th week of treatment, authorization will be given for a maximum period of three months. After which, for subsequent authorizations renewals, lasting a maximum of 12 months, the physician will have to demonstrate the clinical benefits obtained with this dosage.

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis:
  - in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or of large plaques on the face, palms or soles or in the genital area;  
and
  - in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;  
and
  - where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;  
and
  - where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of serious intolerance or a serious contraindication, these two agents must be:
    - methotrexate at a dose of 15 mg or more per week;
    - or
    - cyclosporine at a dose of 3 mg/kg or more per day;
    - or
    - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;  
or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base values;  
or
- a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pre-treatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for adalimumab are given for an induction dose of 80 mg, followed by a maintenance treatment beginning the second week at a dose of 40 mg every two weeks.

- ◆ for treatment of adults suffering from moderate to severe ulcerative colitis that is still active despite treatment with corticosteroids and immunosuppressors, unless there is a serious intolerance or a contraindication:

- in the presence of a Mayo score of 6 to 12 points;  
and
- in the presence of a Mayo endoscopic subscore of at least 2 points.

The initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease in the Mayo score of at least 3 points and at least 30 %, or a decrease in the partial Mayo score of at least 2 points;  
and
- a Mayo rectal bleeding subscore of 0 or 1 point, or a decrease in this subscore of at least 1 point.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

#### ADEFOVIR DIPIVOXIL:

- ◆ for treatment of chronic hepatitis B in persons:
  - having a resistance to lamivudine as defined by one of the following:
    - a 1-log increase in HBV-DNA under treatment with lamivudine, confirmed by a second test one month later;
    - a laboratory trial showing resistance to lamivudine;
    - a 1-log increase in HBV-DNA under treatment with lamivudine, with viremia greater than 20 000 IU/mL.
  - with cirrhosis that is decompensated or at risk of decompensation, with a Child-Pugh score of > 6;
  - after a liver transplant or where the graft is infected with the hepatitis B virus;
  - infected with HIV but not being treated with antiretrovirals for that condition;
  - not having a resistance to lamivudine and whose viral load is greater than 20 000 IU/mL (HBeAg-positive) or 2 000 IU/mL (HBeAg-negative) prior to the beginning of treatment.

#### AFATINIB DIMALEATE:

- ◆ as monotherapy, for first-line treatment of persons suffering from metastatic non-small-cell lung cancer, having an activating mutation of the EGFR tyrosine kinase, and whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

#### AFLIBERCEPT:

- ◆ for treatment of age-related macular degeneration in the presence of choroidal neovascularization. The eye to be treated must meet the following four criteria:
  - optimal visual acuity after correction between 6/12 and 6/96;
  - linear dimension of the lesion less than or equal to 12 disc areas;
  - absence of significant permanent structural damage to the centre of the macula. The structural damage is defined by fibrosis, atrophy or a chronic disciform scar such that, according to the treating physician, it precludes a functional benefit;
  - progression of the disease in the last three months, confirmed by retinal angiography, optical coherence tomography or recent changes in visual acuity.

The initial request is authorized for a maximum of four months. Upon subsequent requests, the physician must provide information making it possible to establish a beneficial clinical effect, consisting in a stabilization or improvement of the medical condition shown by retinal angiography or by optical coherence tomography. Authorizations will then be given for a maximum of 12 months.

The recommended administration regimen is one dose of 2 mg per month during the first three months and, subsequently, every two months. Given that a minority of patients may benefit from a more frequent administration regimen, authorizations will be given for one dose per month per eye. It must be noted that aflibercept will not be authorized concomitantly with ranibizumab or verteporfin to treat the same eye.

- ◆ for treatment of a visual deficiency caused by diabetic macular edema. The eye to be treated must meet the following two criteria:
  - optimal visual acuity after correction between 6/9 and 6/96;
  - thickness of the central retina  $\geq 250 \mu\text{m}$ .

The initial request is authorized for a maximum of six months, for a maximum of one dose per month, per eye.

Upon subsequent requests, the physician must provide information making it possible to establish a beneficial clinical effect, consisting in a stabilization or an improvement of the visual acuity measured on the Snellen scale and a stabilization or an improvement of the macular edema assessed by optical coherence tomography. Requests for renewal will be authorized for a maximum period of 12 months. The recommended administration is one dose every two months, per eye. Given that a minority of patients may benefit from a more frequent administration, authorizations will be given for one dose per month and per eye.

It must be noted that aflibercept will not be authorized concomitantly with ranibizumab to treat the same eye.

- ◆ for treatment of a visual deficiency due to macular edema secondary to an occlusion of the central retinal vein. The eye to be treated must also meet the following two criteria:
  - optimal visual acuity after correction between 6/12 and 6/96;
  - thickness of the central retina  $\geq 250 \mu\text{m}$ .

The initial request is authorized for a maximum of four months.

Upon subsequent requests, the physician must provide information making it possible to establish a beneficial clinical effect, consisting in a stabilization or an improvement of the visual acuity measured on the Snellen scale and a stabilization or an improvement of the macular edema assessed by optical coherence tomography. Requests for renewal will be authorized for maximum periods of 12 months. Authorizations will be given for a maximum of one dose per month, per eye.

It must be noted that ranibizumab will not be authorized concomitantly with aflibercept to treat the same eye.

- ◆ for treatment of a visual deficiency due to macular edema secondary to branch retinal vein occlusion.

The eye to be treated must also meet the following three criteria:

- optimal visual acuity after correction between 6/12 and 6/120;
- thickness of the central retina  $\geq 250 \mu\text{m}$ ;
- absence of afferent pupillary defect.

The initial request is authorized for a maximum of four months.

Upon subsequent requests, the physician must provide information making it possible to establish a beneficial clinical effect, consisting in a stabilization or an improvement of the visual acuity measured on the Snellen scale and a stabilization or an improvement of the macular edema assessed by optical coherence tomography. Requests for renewal will be authorized for maximum periods of 12 months. Authorizations are given for a maximum of one dose per month, per eye.

#### ALECTINIB HYDROCHLORIDE:

- ◆ as monotherapy, for first-line treatment of unresectable locally advanced or metastatic non-small-cell lung cancer in persons:
  - whose tumour shows a rearrangement of the ALK gene;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is 4 months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

- ◆ as monotherapy, for treatment of unresectable locally advanced or metastatic non-small-cell lung cancer in persons :
  - whose tumour shows a rearrangement of the ALK gene;
  - and
  - whose cancer has progressed despite the administration of crizotinib, unless there is a serious intolerance;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

#### ALEMTUZUMAB:

- ◆ for treatment, as monotherapy, of persons suffering from relapsing multiple sclerosis who have had at least two relapses in the last two years, one of which must have occurred in the last year. In addition, one of the relapse must have occurred while the person was taking, and had been doing so for at least six months, a disease modifying drug included on the list of medications for the treatment of this disease under certain conditions. The EDSS score must be equal to or less than 5.

Authorization of the initial request is for a cycle of five consecutive days of treatment at a daily dose of 12 mg to cover the first year of treatment.

For continuation of treatment after the first year, the physician must provide proof of a beneficial effect on the annual frequency of relapses, combined to, a stabilization of the EDSS score or to an increase of less than 2 points, without exceeding a score of 5.

Authorization of the second request is for a cycle of three consecutive days of treatment at a daily dose of 12 mg administered 12 months after the first cycle. The total duration of treatment allowed is 24 months.

#### ALGLUCOSIDASE ALFA:

- ◆ for treatment of an infantile-onset (or a rapidly progressive form) of Pompe's disease, in children whose symptoms appeared before the age of 12 months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of extensive deterioration. Extensive deterioration occurs when the following two criteria are met:

- the presence of invasive ventilation;
- and
- an increase of two points or more in the ventricular mass index Z-score in comparison to the previous value.

The maximum duration of each authorization is six months.

#### ALIROCUMAB:

- ◆ for treatment of adults suffering from heterozygous familial hypercholesterolemia (HeFH), confirmed by genotyping or phenotyping, for whom use of a statin at the optimal dose in association with ezetimibe has not allowed for adequate control of the cholesterolemia, unless there is a serious intolerance or a contraindication.

For patients without an atherosclerotic cardiovascular disease, adequate control of the cholesterolemia is defined by a reduction of at least 50% in the LDL-C concentration compared to the basic levels, that is, before the beginning of any hypolipemiant treatment.

For patients with an atherosclerotic cardiovascular disease, adequate control of the cholesterolemia is defined by the attainment of an LDL-C concentration < 2 mmol/l.

Phenotyping is defined by an LDL-C concentration > 4 mmol/l in children under age 16 or > 4.9 mmol/l in adults before the beginning of a treatment and at least one of the following factors:

- a family history of HeFH confirmed by genotyping of a first-degree relative;
- the presence of a mutation causing familial hypercholesterolemia of the LDLR, ApoB or PCSK9 genes in a first-degree relative;
- the presence of xanthomas in the person or in one of the first-degree or second-degree relatives;
- the presence of a corneal arcus before age 45 in a first-degree relative;
- a family history of LDL-C concentration > 4.9 mmol/l in an adult first-degree relative or ≥ 4 mmol/l in a first-degree parent under age 18;
- a family history of total cholesterol concentration > 7.5 mmol/l in an adult first-degree or second-degree relative or > 6.7 mmol/l in a first degree parent under age 16.

The initial request is authorized for a maximum period of four months.

Upon subsequent requests, the physician must provide information making it possible to establish the beneficial clinical effects of the treatment, that is, a decrease ≥ 40 % in the LDL-C concentration compared to the value before the beginning of treatment with alirocumab. Subsequent requests are authorized for a maximum duration of 12 months.

Authorizations for alirocumab are given for a maximum dose of 150 mg every two weeks.

#### ALISKIREN:

- ◆ for treatment of arterial hypertension, in association with at least one antihypertensive agent, if there is a therapeutic failure of, intolerance to, or a contraindication for:
  - a thiazide diuretic;
  - and
  - an angiotensin converting enzyme inhibitor (ACEI);
  - and
  - an angiotensin II receptor antagonist (ARA).

However, following therapeutic failure of an ACEI, a trial of an ARA is not required and vice versa.

#### ALISKIREN / HYDROCHLOROTHIAZIDE:

- ◆ for treatment of arterial hypertension if there is a therapeutic failure of a thiazide diuretic and if there is a therapeutic failure of intolerance to, or a contraindication for:
  - an angiotensin converting enzyme inhibitor (ACEI);
  - and
  - an angiotensin II receptor antagonist (ARA).

However, following therapeutic failure of an ACEI, a trial of an ARA is not required and vice versa.

#### ALITRETINOIN:

- ◆ for treatment of severe chronic hand eczema that has not adequately responded to a continuous treatment of at least 8 weeks with a high or ultra-high potency topical corticosteroid, despite the elimination of contact allergens when they are identified as the cause of the eczema.

The initial authorization is granted for a treatment lasting a maximum of 24 weeks at a daily dose of 30 mg.

Subsequent treatments may be authorized in the event of recurrence, on the following conditions:

- The previous treatment led to a complete or almost complete disappearance of the symptoms;
- The intensity of symptoms during the recurrence must be moderate or severe despite a new continuous treatment of at least 4 weeks with a high or ultra-high potency topical corticosteroid, despite the elimination of contact allergens when they are identified as the cause of the eczema.

The physician must provide the response obtained with the previous treatment, as well as the intensity of the symptoms at the time of the recurrence.

Subsequent authorizations are granted for a treatment lasting a maximum of 24 weeks at a daily dose of 30 mg.

#### ALOGLIPTIN BENZOATE:

- ◆ for treatment of type-2 diabetic persons:
  - as monotherapy, where metformin and a sulfonylurea are contraindicated or not tolerated;
  - or
  - in association with metformin, where a sulfonylurea is contraindicated, not tolerated or ineffective;
  - or
  - in association with a sulfonylurea, where metformin is contraindicated, not tolerated or ineffective.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

#### ALOGLIPTIN BENZOATE / METFORMIN HYDROCHLORIDE:

- ◆ for treatment of type-2 diabetic persons:
  - where a sulfonylurea is contraindicated, not tolerated or ineffective;
  - and
  - where the optimal maximum dose of metformin has been stable for at least one month.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

#### AMBRISENTAN:

- ◆ for treatment of pulmonary arterial hypertension of WHO functional class III that is either idiopathic or associated with connectivitis and that is symptomatic despite the optimal conventional treatment.

Persons must be evaluated and followed up on by physicians working at designated centres specializing in the treatment of pulmonary arterial hypertension.

#### AMPHETAMINE MIXED SALTS:

- ◆ for treatment of persons with attention deficit disorder, with or without hyperactivity.

#### APALUTAMIDE :

- ◆ for treatment of non-metastatic castration-resistant prostate cancer, in persons:
  - at high risk of developing distant metastases despite an androgenic deprivation treatment. High risk is defined as a prostate specific antigen doubling time equal to or less than 10 months;
  - and

- whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression.

★ APIXABAN:

- ◆ for the prevention of stroke and systemic embolic event in persons with non-valvular atrial fibrillation requiring anticoagulant therapy.
- ◆ for treatment of persons suffering from venous thromboembolism (deep vein thrombosis and pulmonary embolism).

Authorization is given for a dose of 10 mg twice a day in the first seven days of treatment, followed by a dose of 5 mg twice a day.

The maximum duration of the authorization is six months.

- ◆ for the prevention of recurring venous thromboembolism (deep vein thrombosis and pulmonary embolism) in persons who were treated with anticoagulant therapy during a period of at least six months for an acute episode of idiopathic venous thromboembolism.

The maximum duration of each authorization is 12 months and may be granted every 12 months if the physician considers that the expected benefits outweigh the risks incurred. Authorization is given for a dose of 2.5 mg twice a day.

- ◆ for prevention of venous thromboembolism following a knee arthroplasty.

The maximum duration of the authorization is 14 days.

- ◆ for prevention of venous thromboembolism following a hip arthroplasty.

The maximum duration of the authorization is 35 days.

APOMORPHINE HYDROCHLORIDE:

- ◆ for treatment of moderate to severe "off" periods that are refractory to an optimized treatment, in patients suffering from advanced-stage Parkinson's disease.

APREMILAST:

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis, before using a biological agent listed to treat this disease:
  - in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or of large plaques on the face, palms or soles or in the genital area;
  - and
  - in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;
  - and
  - where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;
  - and

- where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of a serious intolerance or contraindication, these two agents must be:
  - methotrexate at a dose of 15 mg or more per week;
  - or
  - cyclosporine at a dose of 3 mg/kg or more per day;
  - or
  - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire;
- or
- a significant improvement in lesions on the face, palms or soles or in the genital area and a decrease of at least five points on the DQLI questionnaire.

Requests for continuation of treatment are authorized for a maximum period of six months.

Authorizations for apremilast are given for 30 mg, twice a day.

It must be noted that apremilast is not authorized if administered concomitantly with a standard or biological systemic treatment indicated for treatment of plaque psoriasis.

#### ★ APREPITANT:

- ◆ As first-line antiemetic therapy for nausea and vomiting during a highly emetic chemotherapy treatment. Authorizations are given for a maximum of three doses of aprepitant per chemotherapy treatment, administered over three consecutive days.

The first dose must be administered the first day of a chemotherapy treatment, in association with dexamethasone and a 5-HT<sub>3</sub> receptor antagonist.

#### ATOMOXETINE HYDROCHLORIDE:

- ◆ for treatment of children and adolescents suffering from attention deficit disorder in whom it has not been possible to properly control the symptoms of the disease with methylphenidate and an amphetamine or for whom these drugs are contraindicated.

Before it can be concluded that these drugs are ineffective, they must have been titrated at optimal doses and, in addition, a 12-hour controlled-release form of methylphenidate or a form of amphetamine mixed salts or lisdexamfetamine must have been tried, unless there is proper justification for not complying with these requirements.

#### AXITINIB:

- ◆ for second-line treatment of a metastatic renal adenocarcinoma characterized by the presence of clear cells after treatment with a tyrosine kinase inhibitor has failed, unless there is a contraindication or a serious intolerance, in persons whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

- ◆ as monotherapy, for the continuation of treatment of renal adenocarcinoma at the locally advanced unresectable or metastatic stage, in persons who have begun a treatment associating pembrolizumab and axitinib at a hospital, and for whom pembrolizumab had to be terminated due to a serious intolerance or a treatment duration of 24 months.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

#### AZELAIC ACID:

- ◆ for treatment of rosacea where a topical preparation of metronidazole is ineffective, contraindicated or poorly tolerated.

#### AZTREONAM:

- ◆ for treatment of persons suffering from cystic fibrosis, chronically infected by *Pseudomonas aeruginosa*:
  - where their condition deteriorates despite treatment with a formulation of tobramycin for inhalation;
  - or
  - where they are intolerant to a solution of tobramycin for inhalation;
  - or
  - where they are allergic to tobramycin.

#### BENRALIZUMAB:

- ◆ for treatment of severe eosinophilic asthma in adults:
  - with an eosinophil blood count of at least 300 cells/microlitre ( $0.30 \times 10^9/l$ ) at the time the benralizumab treatment is initiated or who had this concentration prior to starting a treatment with another medication targeting interleukin-5 (IL-5);
  - and
  - whose symptoms are not controlled despite optimal treatment. Optimal treatment is understood as the use of an inhaled corticosteroid at a dose equivalent to 1000 mcg of propionate fluticasone, a long-acting  $\beta_2$  agonist, and the trial of a leukotriene receptor antagonist, an inhaled long-acting antimuscarinic or theophyllin;
  - and
  - who have shown at least two exacerbations in the last year requiring the use of a systemic corticosteroid or an increase in the dose of this drug in the case of patients receiving it on an ongoing basis.

The physician must provide the number of exacerbations in the last year, as previously defined, along with the results of one of the following questionnaires:

- Asthma Control Questionnaire (ACQ);
- or
- Asthma Control Test (ACT);
- or
- St George's Respiratory Questionnaire (SGRQ);
- or
- Asthma Quality of Life Questionnaire (AQLQ).

Upon the initial request, the physician must have previously ascertained the inhalation technique, compliance with the pharmacological treatment and the implementation of strategies aimed at reducing exposure to aeroallergens for which the person had obtained a positive skin test or positive *in vitro* reactivity test.

The initial authorization is for a maximum duration of eight months.

Upon the second request, the physician must provide information demonstrating the beneficial effects of the treatment, namely:

- a decrease of 0.5 point or more on the ACQ questionnaire;
- or
- an increase of 3 points or more on the ACT questionnaire;
- or
- a decrease of 4 points or more on the SGRQ questionnaire;
- or
- an increase of 0.5 point or more on the AQLQ questionnaire.

The second request will be authorized for a maximum duration of 12 months.

Upon subsequent requests, the physician must provide proof of the continuation of the beneficial effects on one of the aforementioned questionnaires or proof of a decrease in the number of annual exacerbations as previously defined.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations are given for a maximum dose of 30 mg every four weeks for the first three doses, followed thereafter by 30 mg every eight weeks.

- ◆ for treatment of severe asthma requiring the use of an oral corticosteroid on an ongoing basis for at least three months, in adults with an eosinophil blood level of at least 150 cells/microlitre ( $0.15 \times 10^9/l$ ) at the time the benralizumab treatment is initiated or who had this level before having started the treatment with another medication targeting interleukin-5 (IL-5).

The initial authorization is for a maximum duration of eight months.

Upon the second request, the physician must confirm a decrease in the corticosteroid maintenance dose equivalent to 10 mg or more of prednisone or of at least 50% compared to the one before the start of the benralizumab treatment.

The second request will be authorized for a maximum duration of 12 months.

Upon subsequent requests, the physician must confirm the continuation of the decrease in the maintenance dose of the oral corticosteroid.

Requests for continuation of treatment are authorized for a maximum duration of 12 months.

Authorizations are given for a maximum dose of 30 mg every four weeks for the first three doses, followed thereafter by 30 mg every eight weeks.

#### BISACODYL:

- ◆ for treatment of constipation related to a medical condition.

#### BOSENTAN:

- ◆ for treatment of pulmonary arterial hypertension of WHO functional class III that is either idiopathic or associated with connectivitis and that is symptomatic despite the optimal conventional treatment;

Persons must be evaluated and followed up on by physicians working at designated centres specializing in the treatment of pulmonary arterial hypertension.

#### BRIVARACETAM:

- ◆ for adjunctive treatment of persons suffering from refractory partial epilepsy, that is, following the failure of two appropriate and tolerated antiepileptic drugs (used either as monotherapy or in combination).

It must be noted that brivaracetam is not authorized if administered concomitantly with levetiracetam.

#### BRODALUMAB:

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis:
  - in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or in the presence of large plaques on the face, palms or soles or in the genital area;  
and
  - in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;  
and
  - where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;  
and
  - where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of a serious intolerance or contraindication, these two agents must be:
    - methotrexate at a dose of 15 mg or more per week;
    - or
    - cyclosporine at a dose of 3 mg/kg or more per day;
    - or
    - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;  
or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base value;  
or
- a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pretreatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for brodalumab are given for 210 mg on weeks 0, 1 and 2, then every two weeks.

#### BUPRENORPHINE:

- ◆ for treatment of an opioid-use disorder in adults whose clinical condition is stabilized by a sublingual buprenorphine-based treatment.

#### BUPRENORPHINE HYDROCHLORIDE:

- ◆ for treatment of an opioid-use disorder in adults whose clinical condition is stabilized by a daily dose of 8 mg or less of buprenorphine administered sublingually.

#### CABERGOLINE:

- ◆ for treatment of hyperprolactinemia in persons for whom bromocriptine or quinagolide is ineffective, contraindicated or not tolerated.

Notwithstanding the payment indication set out above, cabergoline remains covered by the basic prescription drug insurance plan for insured persons who used this drug during the 12-month period preceding 1 October 2007 and if its cost was already covered under that plan as part of the recognized indications provided in the appendix hereto.

#### CABOZANTINIB:

- ◆ as monotherapy, for treatment of locally advanced or metastatic renal adenocarcinoma, characterized by the presence of clear cells, in persons:
  - whose cancer has progressed despite the administration of at least one treatment targeting the VEGF receptor;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression, confirmed by imaging.

#### CALCIPOTRIOL / BETAMETHASONE DIPROPIONATE:

- ◆ for treatment of plaque psoriasis in persons for whom control of the disease is insufficient despite the use of a vitamin D analog or a medium or high potency topical corticosteroid.

#### CALCIUM carbonate, Oral foam:

- ◆ for persons unable to take tablets.

#### CALCIUM CITRATE, Oral Sol.:

- ◆ for persons unable to take tablets.

#### CALCIUM CITRATE / VITAMIN D, Oral Sol.:

- ◆ for persons unable to take tablets.

#### CALCIUM GLUCONATE / CALCIUM LACTATE:

- ◆ for persons unable to take tablets.

#### CALCIUM GLUCONATE / CALCIUM LACTATE / VITAMIN D:

- ◆ for persons unable to take tablets.

#### CANAGLIFLOZIN:

- ◆ for treatment of type-2 diabetic persons:
  - as monotherapy, where metformin and a sulfonylurea are contraindicated or not tolerated;
  - or
  - in association with metformin, where a sulfonylurea is contraindicated, not tolerated or ineffective;
  - or
  - in association with a sulfonylurea, where metformin is contraindicated, not tolerated or ineffective.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

CARBOXYMETHYLCELLULOSE SODIUM:

- ◆ for treatment of keratoconjunctivitis sicca or other severe conditions accompanied by markedly reduced tear production.

CARBOXYMETHYLCELLULOSE SODIUM / PURITE:

- ◆ for treatment of keratoconjunctivitis sicca or other severe conditions accompanied by markedly reduced tear production.

★ CASPOFUNGIN ACETATE:

- ◆ for treatment of invasive aspergillosis in persons for whom first-line treatment has failed or is contraindicated, or who are intolerant to such a treatment.
- ◆ for treatment of invasive candidosis in persons for whom treatment with fluconazole has failed or is contraindicated, or who are intolerant to such a treatment.
- ◆ for treatment of esophageal candidosis in persons for whom treatment with itraconazole or with fluconazole and an amphotericin B formulation has failed or is contraindicated or who are intolerant to such a treatment.

★ CEFTOBIPROLE:

- ◆ for treatment of nosocomial pneumonia not acquired under assisted ventilation where an antibiotic against methicillin-resistant *Staphylococcus aureus* is indicated and where vancomycin and linezolid are ineffective, contraindicated or not tolerated.

★ CEFTOLOZANE / TAZOBACTAM:

- ◆ for treatment of complicated urinary infections, where the antibiogram demonstrates that at least one of the responsible pathogens is sensitive only to ceftolozane / tazobactam.
- ◆ for treatment of complicated urinary infections, where the antibiogram demonstrates that at least one of the responsible pathogens is sensitive only to ceftolozane / tazobactam, to aminoglycosides and to colistimethate sodium but that the latter two antimicrobial agents cannot be administered due to a serious intolerance or a contraindication.
- ◆ for treatment of complicated intra-abdominal infections, where the antibiogram demonstrates that at least one of the responsible pathogens is sensitive only to ceftolozane / tazobactam.
- ◆ for treatment of complicated intra-abdominal infections, where the antibiogram demonstrates that at least one of the responsible pathogens is sensitive only to ceftolozane / tazobactam, to aminoglycosides and to colistimethate sodium but that the latter two antimicrobial agents cannot be administered due to a serious intolerance or a contraindication.

CERITINIB:

- ◆ as monotherapy, for treatment of unresectable locally advanced or metastatic non-small-cell lung cancer in persons:
  - whose tumour shows a rearrangement of the ALK gene;
  - and
  - whose cancer has progressed despite the administration of crizotinib, unless there is a serious intolerance;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

#### CERTOLIZUMAB PEGOL:

- ◆ for treatment of moderate or severe rheumatoid arthritis and moderate or severe psoriatic arthritis of rheumatoid type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor for rheumatoid arthritis only;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each.

For rheumatoid arthritis, one of the two drugs must be methotrexate at a dose of 20 mg or more per week, unless there is serious intolerance or a contraindication to this dose.

For moderate or severe psoriatic arthritis of rheumatoid type, unless there is a serious intolerance or a contraindication, one of the two drugs must be:

- methotrexate at a dose of 20 mg or more per week;
- or
- sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

For rheumatoid arthritis, authorizations for certolizumab are given for a dose of 400 mg for the first three doses of the treatment, that is, on weeks 0, 2 and 4, followed by 200 mg every two weeks.

For psoriatic arthritis of rheumatoid type, authorizations for certolizumab are given for a dose of 400 mg for the first three doses of the treatment, that is, on weeks 0, 2 and 4, followed by 200 mg every two weeks or 400 mg every four weeks.

- ◆ for treatment of moderate or severe psoriatic arthritis, of a type other than rheumatoid.  
Upon initiation of treatment or if the person has been receiving the drug for less than five months:
  - prior to the beginning of treatment, the person must have three or more joints with active synovitis and a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - and
  - the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is a serious intolerance or a contraindication, one of the two drugs must be:
    - methotrexate at a dose of 20 mg or more per week;
    - or

- sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for certolizumab are given for a dose of 400 mg for the first three doses of the treatment, that is, on weeks 0, 2 and 4, followed by 200 mg every two weeks or 400 mg every four weeks.

- ◆ for treatment of persons suffering from moderate or severe ankylosing spondylitis whose BASDAI score is  $\geq 4$  on a scale of 0 to 10 and in whom the sequential use of two non-steroidal anti-inflammatories at the optimal dose for a period of three months each did not adequately control the disease, unless there is a contraindication:
  - Upon the initial request, the physician must provide the following information:
    - the BASDAI score;
    - the degree of functional injury according to the BASFI (scale of 0 to 10).

The initial request will be authorized for a maximum of five months.

- When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:
  - a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;
  - or
  - a decrease of 1.5 points or 43% on the BASFI scale;
  - or
  - a return to work.

Requests for continuation of treatment will be authorized for maximum periods of 12 months.

Authorizations for certolizumab are given for a dose of 400 mg on weeks 0, 2 and 4, followed by 200 mg every two weeks or 400 mg every four weeks.

#### CETRORELIX:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are granted for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.

Authorizations are granted for a maximum duration of one year.

#### CHORIOGONADOTROPIN ALFA:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are given for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.

Authorizations are granted for a maximum duration of one year.

#### CHORIONIC GONADOTROPIN:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are granted for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.

Authorizations are granted for a maximum duration of one year.

- ◆ for spermatogenesis induction in men suffering from hypogonadotropic hypogonadism who wish to procreate.

In the absence of spermatogenesis after a treatment of at least six months, continuation of the treatment in association with a gonadotropin is authorized.

Authorizations are granted for a maximum duration of one year.

#### CINACALCET HYDROCHLORIDE:

- ◆ for treatment of dialyzed persons having severe secondary hyperparathyroiditis with an intact parathormone level greater than 88 pmol/L measured twice within a three-month period, despite an optimal phosphate binder and vitamin D based treatment, unless there is significant intolerance to these agents or they are contraindicated, and having:

- a corrected calcemia  $\geq 2.54$  mmol/L;
- or
- a phosphoremia  $\geq 1.78$  mmol/L;
- or
- a phosphocalcic product  $\geq 4.5$  mmol<sup>2</sup>/L<sup>2</sup>;
- or
- symptomatic osteoarticular manifestations.

The optimal vitamin D based treatment is defined as follows: one minimum weekly dose of 3 mcg of calcitriol or alfacalcidol.

#### CLADRIBINE :

- ◆ as monotherapy, for treatment of persons suffering from relapsing multiple sclerosis, whose EDSS score is equal to or less than 5.5 and:

- who have had at least one relapse in the last year, one of which occurred while the person had been taking, for at least six months, one of the disease modifying agents included on the *List of Medications* for first-line treatment of this disease;

or

- who have a contraindication or an intolerance to at least two disease-modifying agents included on the *List of Medications* for first-line treatment of this disease.

Authorization of the request is for a maximum period of two years.

#### CLINDAMYCIN PHOSPHATE, Vag. Cr.:

- ◆ for treatment of bacterial vaginosis during the first trimester of pregnancy.
- ◆ where intravaginal metronidazole is ineffective, contraindicated or poorly tolerated.

#### COBIMETINIB:

- ◆ in association with vemurafenib, for first-line or second-line treatment following a failure with chemotherapy or with immunotherapy targeting the PD-1 or the CTLA-4, of an unresectable or metastatic melanoma with a BRAF V600 mutation, in persons whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging or based on a physical examination.

It must be noted that cobimetinib, in association with vemurafenib, is not authorized following the failure of a treatment associating a BRAF inhibitor and a MEK inhibitor if it was administered to treat a melanoma.

#### ★ CODEINE PHOSPHATE, Syr.:

- ◆ for treatment of pain in persons unable to take tablets.

#### COLESEVELAM HYDROCHLORIDE:

- ◆ for treatment of hypercholesterolemia, in persons at high risk of cardiovascular disease:
  - in association with an HMG-CoA reductase inhibitor (statin) at the optimal dose or at a lower dose in case of intolerance to that dose;
  - where an HMG-CoA reductase inhibitor (statin) is contraindicated;
  - where intolerance has led to a cessation of treatment of at least two HMG-CoA reductase inhibitors (statin).

#### COLLAGENASE:

- ◆ for wound debridement in the presence of devitalized tissue. Authorization is given for a maximal period of 60 days.

#### CRIZOTINIB:

- ◆ as monotherapy, for first-line treatment of locally advanced or metastatic non-small-cell lung cancer in persons:
  - whose tumour shows a rearrangement of the ALK gene;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

- ◆ as monotherapy, for treatment of locally advanced or metastatic non-small-cell lung cancer in persons:
  - whose tumour shows a rearrangement of the ALK gene;
  - and

- whose cancer has progressed despite administration of a first-line treatment based on platine-salt, unless there is a serious contraindication or intolerance;
- and
- whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

- ◆ as monotherapy, for treatment of locally advanced or metastatic non-small-cell lung cancer, in persons:

- whose tumour shows a rearrangement of the ROS1 gene;
- and
- whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

CYANOCOBALAMINE, L.A. Tab. and Oral Sol.:

- ◆ for persons suffering from a vitamin B<sub>12</sub> deficiency.

CYSTEAMINE, Oph. Sol.:

- ◆ for the reduction of corneal cystine crystal deposits in persons of at least two years of age who are suffering from cystinosis.

CYSTEAMINE BITARTRATE:

- ◆ for the treatment of persons suffering from nephropathic cystinosis confirmed by the presence of a mutation in the CTNS gene.

The maximum duration of each authorization is 12 months. When requesting continuation of treatment, the physician must provide proof of a beneficial clinical effect defined by an intra-leukocyte cystine level  $\leq 2$  nanomoles of hemicystine per milligram of protein at at least one dosage per year. Three dosages of hemicystine must be made, every three to four months, during the year.

★ DABIGATRAN ETEXILATE:

- ◆ for the prevention of stroke and systemic embolic event in persons with non-valvular atrial fibrillation requiring anticoagulant therapy.

DABRAFENIB MESYLATE:

- ◆ as monotherapy or in association with trametinib for first-line or second-line treatment following a failure with chemotherapy or with immunotherapy targeting the PD-1 or the CTLA-4, of an unresectable or metastatic melanoma with a BRAF V600 mutation, in persons whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging or based on a physical examination.

It must be noted that dabrafenib, in association with trametinib, is not authorized following the failure of a treatment associating a BRAF inhibitor and a MEK inhibitor if it was administered to treat a melanoma.

- ◆ in association with trametinib, for adjuvant treatment of a melanoma expressing a V600 mutation of the BRAF gene with regional lymph node involvement, or with in-transit or satellite metastases without lymph node involvement, in persons:
  - whose melanoma has been completely resected;
  - and
  - whose last resection was performed in the previous last 12 weeks;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease recurrence.

The maximum duration of the treatment is 12 months.

#### DAPAGLIFLOZIN:

- ◆ for treatment of type-2 diabetic persons:
  - in association with metformin, where a sulfonylurea is contraindicated, not tolerated or ineffective;
  - or
  - in association with a sulfonylurea, where metformin is contraindicated, not tolerated or ineffective.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

#### DAPAGLIFLOZIN / METFORMIN HYDROCHLORIDE:

- ◆ for treatment of type-2 diabetic persons:
  - where a sulfonylurea is contraindicated, not tolerated or ineffective;
  - and
  - where the optimal maximum dose of metformin has been stable for at least one month.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

#### DARBEPOETIN ALFA:

- ◆ for treatment of anemia related to severe chronic renal failure (creatinine clearance less than or equal to 35 mL/min).
- ◆ for treatment of chronic and symptomatic non-hemolytic anemia not caused by an iron, folic acid or vitamin B<sub>12</sub> deficiency:
  - in persons having a non-myeloid tumour treated with chemotherapy and whose hemoglobin rate is less than 100 g/L.

The maximum duration of the initial authorization is three months. When requesting continuation of treatment, the physician must provide evidence of a beneficial effect defined by an increase in the reticulocyte count of at least  $40 \times 10^9/L$  or an increase in the hemoglobin measurement of at least 10 g/L. A hemoglobin rate under 120 g/L should be targeted.

However, for persons suffering from cancer other than those previously specified, darbepeotin alfa remains covered by the basic prescription drug insurance plan until 31 January 2008 insofar as the treatment was already underway on 1 October 2007 and that its cost was already covered under that plan as part of the recognized indications provided in the appendix hereto and that the physician provides evidence of a beneficial effect defined by an increase in the reticulocyte count of at least  $40 \times 10^9/L$  or an increase in the hemoglobin measurement of at least 10 g/L.

DARUNAVIR, Tab. 600 mg:

- ◆ for treatment, in association with other antiretrovirals, of HIV-infected persons:
  - who have tried, since the beginning of their antiretroviral therapy, at least one therapy that included another protease inhibitor and that resulted:
    - in a documented virological failure, after at least three months of treatment with an association of several antiretroviral agents;
  - or
  - in serious intolerance to at least three protease inhibitors, to the point of calling into question the continuation of the antiretroviral treatment.
- ◆ for first-line treatment, in association with other antiretrovirals, of HIV-infected persons for whom a laboratory test showed an absence of sensitivity to other protease inhibitors, coupled with a resistance to one or the other class of nucleoside reverse transcriptase inhibitors and non-nucleoside reverse transcriptase inhibitors, or to both, and:
  - whose current viral load and another dating back at least one month are greater than or equal to 500 copies/mL;
  - and
  - whose current CD4 lymphocyte count and another dating back at least one month are less than or equal to  $350/\mu L$ ;
  - and
  - for whom the use of darunavir is necessary to establish an effective therapeutic regimen.

DASATINIB:

- ◆ for first-line treatment of chronic myeloid leukemia in the chronic phase in adults having a serious contraindication to imatinib and nilotinib.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a hematologic response.

- ◆ for treatment of chronic myeloid leukemia in the chronic phase in adults:
  - for whom imatinib or nilotinib has failed or produced a sub-optimal response;
  - or
  - who have serious intolerance to imatinib or nilotinib.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a hematologic response.

- ◆ for treatment of chronic myeloid leukemia in the accelerated phase in adults:
  - for whom imatinib has failed or produced a sub-optimal response;
  - or
  - who have serious intolerance to imatinib.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a hematologic response.

- ◆ for treatment of Philadelphia chromosome-positive acute lymphoblastic leukemia in adults for whom treatment with imatinib has failed or who are seriously intolerant to this drug and whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by proof of a hematologic response.

DENOSUMAB, S.C. Inj. Sol. (syr) 60 mg/mL:

- ◆ for treatment of postmenopausal osteoporosis in women who cannot receive an oral bisphosphonate because of serious intolerance or a contraindication.
- ◆ for treatment of osteoporosis in men at high risk of fracture who cannot receive an oral bisphosphonate because of serious intolerance or a contraindication.

DENOSUMAB, Inj. Sol. 120 mg/1.7mL:

- ◆ for prevention of bone events in persons suffering from castration-resistant prostate cancer with at least one bone metastasis.
- ◆ for prevention of bone events in persons suffering from breast cancer with at least one bone metastasis, where pamidronate or zoledronic acid is not tolerated.

DEXAMETHASONE, Intravitreal implant:

- ◆ for treatment of macula edema secondary to central retinal vein occlusion.

Authorization is granted for treatment lasting a maximum of one year, with a maximum of two implants per injured eye.

- ◆ for treatment of a visual deficiency due to diabetic macular edema in pseudophakic patients, where a treatment with an anti-VEGF is ineffective, contraindicated or not tolerated. The eye to be treated must also meet the following two criteria:
  - optimal visual acuity after correction between 6/15 and 6/60;
  - thickness of the central retina  $\geq 300 \mu\text{m}$ .

Authorizations are granted for a maximum duration of one year, with a maximum of one implant per six months per eye.

When requesting continuation of treatment, the physician must provide information demonstrating a beneficial clinical effect, that is, a stabilization or an improvement of the visual acuity measured on the Snellen scale and a stabilization or an improvement of the macular edema assessed by optical coherence tomography.

DICLOFENAC SODIUM, Oph. Sol.:

- ◆ for treatment of ocular inflammation in persons for whom ophthalmic corticosteroids are not indicated.

DIMETHYL fumarate:

- ◆ for treatment of persons suffering from relapsing multiple sclerosis who have had one relapse in the last year and whose EDSS score is less than 7.

Authorization of the initial request is granted for a maximum of one year. The same duration applies to requests for continuation of treatment. In these latter cases, however, the physician must provide proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

**DIPHENHYDRAMINE HYDROCHLORIDE:**

- ◆ for adjuvant treatment of certain psychiatric disorders and of Parkinson's disease.

**DIPYRIDAMOLE / ACETYLSALICYLIC ACID:**

- ◆ for secondary prevention of strokes in persons who have already had a stroke or a transient ischemic attack.

**DOCUSATE CALCIUM:**

- ◆ for treatment of constipation related to a medical condition.

**DOCUSATE SODIUM:**

- ◆ for treatment of constipation related to a medical condition.

**DONEPEZIL HYDROCHLORIDE:**

- ◆ as monotherapy for persons suffering from Alzheimer's disease at the mild or moderate stage.

Upon the initial request, the following elements must be present:

- an MMSE score of 10 to 26, or as high as 27 or 28 if there is proper justification;
- medical confirmation of the degree to which the person is affected (intact domain, mildly, moderately or severely affected) in the following five domains:
  - intellectual function, including memory;
  - mood;
  - behaviour;
  - autonomy in activities of daily living (ADL) and in instrumental activities of daily living (IADL);
  - social interaction, including the ability to carry on a conversation.

The duration of an initial authorization for treatment with donepezil is six months from the beginning of treatment.

However, where the cholinesterase inhibitor is used following treatment with memantine, the concomitant use of both medications is authorized for one month.

Upon subsequent requests, the physician must provide evidence of a beneficial effect confirmed by each of the following elements:

- an MMSE score of 10 or more, unless there is proper justification;
- a maximum decrease of 3 points in the MMSE score per six-month period compared with the previous evaluation, or a greater decrease accompanied by proper justification;
- stabilization or improvement of symptoms in one or more of the following domains:
  - intellectual function, including memory;
  - mood;
  - behaviour;
  - autonomy in activities of daily living (ADL) and in instrumental activities of daily living (IADL);
  - social interaction, including the ability to carry on a conversation.

The maximum duration of authorization is 12 months.

DORNASE ALFA:

- ◆ during initial treatment in persons over 5 years of age suffering from cystic fibrosis and whose forced vital capacity is more than 40 percent of the predicted value. The maximum duration of the initial authorization is three months.
- ◆ during maintenance treatment in persons for whom the physician provides evidence of a beneficial clinical effect. The maximum duration of authorization is one year.

DRESSING, ABSORPTIVE – GELLING FIBRE:

- ◆ for treatment of persons suffering from severe burns.
- ◆ for treatment of persons suffering from a pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.
- ◆ for treatment of persons suffering from a severe chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

DRESSING, ABSORPTIVE – HYDROPHILIC FOAM ALONE OR IN ASSOCIATION:

- ◆ for treatment of persons suffering from severe burns.
- ◆ for treatment of persons suffering from a pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.
- ◆ for treatment of persons suffering from a severe chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

DRESSING, ABSORPTIVE – SODIUM CHLORIDE:

- ◆ for treatment of persons suffering from severe burns.
- ◆ for treatment of persons suffering from a pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.

- ◆ for treatment of persons suffering from a severe chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

#### DRESSING, ANTIMICROBIAL – IODINE:

- ◆ for treatment of persons suffering from severe burns or severe chronic wounds (affecting the subcutaneous tissue) with a local infection;

A wound with a local infection includes the following clinical signs: purulent discharge, friable granulation tissue that bleeds easily, delayed wound healing, accentuated odour, the onset of or increase in pain, and localized inflammation. Local infection of a chronic wound, if it persists, may lead to infection of the chronic wound with systemic signs or symptoms.

Each authorization is granted for a maximum duration of 12 weeks, whether for a first wound, for each new wound or for a recurring wound on the same site.

When requesting continuation of treatment for a wound that is not healed after 12 weeks, the prescriber must specify the reason for which the treatment must be pursued and provide information making it possible to establish the beneficial effects of the treatment. Subsequent authorizations are granted for a maximum duration of 12 weeks.

#### DRESSING, ANTIMICROBIAL – SILVER:

- ◆ for treatment of persons suffering from severe burns or severe chronic wounds (affecting the subcutaneous tissue) with a local infection;

A wound with a local infection includes the following clinical signs: purulent discharge, friable granulation tissue that bleeds easily, delayed wound healing, accentuated odour, the onset of or increase in pain, and localized inflammation. Local infection of a chronic wound, if it persists, may lead to infection of the chronic wound with systemic signs or symptoms.

Each authorization is granted for a maximum duration of 12 weeks, whether for a first wound, for each new wound or for a recurring wound on the same site.

When requesting continuation of treatment for a wound that is not healed after 12 weeks, the prescriber must specify the reason for which the treatment must be pursued and provide information making it possible to establish the beneficial effects of the treatment. Subsequent authorizations are granted for a maximum duration of 12 weeks.

#### DRESSING, BORDERED ABSORPTIVE– GELLING FIBRE:

- ◆ for treatment of persons suffering from severe burns.
- ◆ for treatment of persons suffering from a pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.
- ◆ for treatment of persons suffering from a severe chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

#### DRESSING, BORDERED ABSORPTIVE – HYDROPHILIC FOAM ALONE OR IN ASSOCIATION:

- ◆ for treatment of persons suffering from severe burns.

- ◆ for treatment of persons suffering from a pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.
- ◆ for treatment of persons suffering from a severe chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

#### DRESSING, BORDERED ABSORPTIVE– POLYESTER AND RAYON FIBRE:

- ◆ for treatment of persons suffering from severe burns.
- ◆ for treatment of persons suffering from a pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.
- ◆ for treatment of persons suffering from a severe chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

#### DRESSING, BORDERED ANTIMICROBIAL – SILVER:

- ◆ for treatment of persons suffering from severe burns or severe chronic wounds (affecting the subcutaneous tissue) with a local infection;

A wound with a local infection includes the following clinical signs: purulent discharge, friable granulation tissue that bleeds easily, delayed wound healing, accentuated odour, the onset of or increase in pain, and localized inflammation. Local infection of a chronic wound, if it persists, may lead to infection of the chronic wound with systemic signs or symptoms.

Each authorization is granted for a maximum duration of 12 weeks, whether for a first wound, for each new wound or for a recurring wound on the same site.

When requesting continuation of treatment for a wound that is not healed after 12 weeks, the prescriber must specify the reason for which the treatment must be pursued and provide information making it possible to establish the beneficial effects of the treatment. Subsequent authorizations are granted for a maximum duration of 12 weeks.

#### DRESSING, BORDERED MOISTURE-RETENTIVE– HYDROCOLLOID OR POLYURETHANE:

- ◆ for treatment of persons suffering from severe burns.
- ◆ for treatment of persons suffering from a pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.

- ◆ for treatment of persons suffering from a severe chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

#### DRESSING, INTERFACE – POLYAMIDE OR SILICONE:

- ◆ to facilitate the treatment of persons suffering from very painful severe burns.

#### DRESSING, MOISTURE RETENTIVE – HYDROCOLLOID OR POLYURETHANE:

- ◆ for treatment of persons suffering from severe burns.
- ◆ for treatment of persons suffering from a pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.
- ◆ for treatment of persons suffering from a severe chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

#### DRESSING, ODOUR-CONTROL – ACTIVATED CHARCOAL:

- ◆ for treatment of persons suffering from a foul-smelling pressure sore of stage 2 or greater.
- ◆ for treatment of persons suffering from a severe foul-smelling wound (affecting the subcutaneous tissue) caused by a chronic disease or by cancer.
- ◆ for treatment of persons suffering from a severe foul-smelling cutaneous ulcer (affecting the subcutaneous tissue) related to arterial or venous insufficiency.
- ◆ for treatment of persons suffering from a severe foul-smelling chronic wound (affecting the subcutaneous tissue) where the scarring process is compromised. In this case, a chronic wound is a wound that has lasted for more than 45 days.

#### DULAGLUTIDE:

- ◆ in association with metformin, for treatment of type-2 diabetic persons whose glycemic control is inadequate and whose body mass index (BMI) is more than 30 kg/m<sup>2</sup> where a DPP-4 inhibitor is contraindicated, not tolerated or ineffective.

The maximum duration of each authorization is 12 months.

When submitting the first request for continuation of treatment, the physician must provide proof of a beneficial effect defined by a reduction in the glycated hemoglobin (HbA<sub>1c</sub>) of at least 0.5% or by the attainment of a target value of 7% or less.

Authorization is given for a weekly maximum dose of 1.5 mg.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

#### DUPILUMAB:

- ◆ for treatment of adults suffering from a moderate to severe form of chronic atopic dermatitis:
  - in the presence of a score greater than or equal to 16 on the Eczema Area and Severity Index (EASI); and

- in the presence of a score greater than or equal to 8 on the Dermatology Life Quality Index (DLQI);  
and
- where 10% or more of the body surface area is affected;  
and
- where the disease is insufficiently controlled despite the use of topical treatments including at least two medium- or high-potency topical corticosteroids and one topical calcineurin inhibitor;  
and
- where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless this treatment is contraindicated, not tolerated or not accessible, or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions.

The initial request is authorized for a maximum period of four months.

Upon subsequent requests, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the EASI score compared to the basic level;  
or
- an improvement of at least 50% in the EASI score and a decrease of at least five points on the DLQI questionnaire compared to the basic level.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for dupilumab are given for an initial dose of 600 mg followed by a dose of 300 mg every two weeks.

#### EDARAVONE:

- ◆ for treatment of amyotrophic lateral sclerosis (ALS) in persons displaying each of the following:
  - a definite or probable diagnosis of ALS according to the revised El Escorial diagnostic criteria;
  - symptoms of the disease for less than two years;
  - a score of at least 2 points on each item of the ALSFRS-R except for dyspnea, orthopnea and respiratory insufficiency, for which a score of four points is required;
  - a forced vital capacity exceeding 80% of the predicted value;
  - no tracheotomy;
  - a creatinine clearance exceeding 50 ml/min;
  - an independent living status.

The maximum duration of each authorization is six months.

Upon subsequent requests, the physician must provide proof of the absence of tracheotomy in the patient.

#### ★ EDOXABAN:

- ◆ for treatment of persons with a venous thromboembolism (deep vein thrombosis and pulmonary embolism).

Authorization is granted for a maximum of 12 months.

- ◆ for the prevention of stroke and systemic embolic event in persons with non-valvular atrial fibrillation requiring anticoagulant therapy.

#### ELBASVIR / GRAZOPREVIR:

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C without decompensated cirrhosis:
  - who are suffering from HCV genotype 1 or 4 and who have never received an anti-HCV treatment;
 or

- who are suffering from HCV genotype 1 and who have experienced a relapse with an association of ribavirin / pegylated interferon alfa administered alone or combined with a protease inhibitor;
- or
- who are suffering from HCV genotype 1, other than subtype 1a, and who have had a null response, a partial response, a viral escape or an intolerance with an association of ribavirin / pegylated interferon alfa administered alone or combined with a protease inhibitor;
- or
- who are suffering from HCV genotype 4 and who have had a relapse with an association of ribavirin / pegylated interferon alfa.

Authorization is granted for a maximum period of 12 weeks.

- ◆ in association with ribavirin, for treatment of persons suffering from chronic hepatitis C without decompensated cirrhosis:
  - who are suffering from HCV genotype 1a and who have had a null response, a partial response, a viral escape or an intolerance with an association of ribavirin / pegylated interferon alfa administered alone or combined with a protease inhibitor;
  - or
  - who are suffering from HCV genotype 4 and who have had a null response, a partial response, a viral escape or an intolerance with an association of ribavirin / pegylated interferon alfa.

Authorization is granted for a maximum period of 16 weeks.

#### ELTROMBOPAG:

- ◆ for treatment of chronic idiopathic thrombocytopenic purpura in:
  - splenectomized or non-splenectomized persons, where surgery is contraindicated;
  - and
  - who are refractory to corticotherapy or for whom corticotherapy is contraindicated;
  - and
  - who have been undergoing maintenance treatment with intravenous immunoglobulin for at least six months, unless there is a contraindication;
  - and
  - whose platelet count was less than  $30 \times 10^9/l$  before intravenous immunoglobulin treatment was initiated or whose platelet count is less than  $30 \times 10^9/l$  where intravenous immunoglobulin is contraindicated.

The initial authorization is for a maximum duration of four months.

Upon subsequent requests, the physician will have to provide evidence of a treatment response defined by a platelet count greater than  $50 \times 10^9/l$  without having to resort to administering intravenous immunoglobulin as part of rescue therapy. Subsequent authorizations will be granted for a maximum duration of six months.

#### EMPAGLIFLOZINE:

- ◆ for treatment of type-2 diabetic persons:
  - as monotherapy, where metformin and a sulfonylurea are contraindicated or not tolerated;
  - or
  - in association with metformin, where a sulfonylurea is contraindicated, not tolerated or ineffective.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA1c) adapted to the patient.

- ◆ for treatment of type-2 diabetic persons, in association with one or several antidiabetic agents, in persons with antecedents of coronary artery disease (CAD) or peripheral artery disease (PAD) and whose glycated hemoglobin (HbA1c) is  $\geq 7\%$ .

For the initial request, the physician will have to specify the type of coronary artery disease (CAD) or peripheral artery disease (PAD) from which the person is suffering.

#### EMPAGLIFLOZINE / METFORMINE HYDROCHLORIDE:

- ◆ for treatment of type-2 diabetic persons whose optimal maximum dose of metformin has been stable for at least one month.

The persons must also fulfill the requirements of the recognized payment indication for empagliflozin.

#### ENFUVIRTIDE:

- ◆ for treatment, in association with other antiretrovirals, of HIV-infected persons for whom a laboratory test showed sensitivity to only one antiretroviral or to none and for whom enfuvirtide has never led to a virological failure.

The initial authorization, lasting a maximum of 5 months, will be given if the viral load is greater than or equal to 5 000 copies/mL. In the case of a first-line treatment, the CD4 lymphocyte count and another dating back at least one month must be less than or equal to 350/ $\mu$ L.

Upon subsequent requests, the physician must provide evidence of a beneficial effect:

- on a recent viral load measurement, showing a reduction of at least 0.5 log compared with the viral load measurement obtained before the enfuvirtide treatment began;
- or
- on a recent CD4 count, showing an increase of at least 30% compared with the CD4 count obtained before the enfuvirtide treatment began.

Authorizations will then have a maximum duration of 12 months.

- ◆ for treatment, in association with other antiretrovirals, of HIV-infected persons who are not concerned by the first paragraph of the previous statement:
  - whose current viral load and another dating back at least one month are greater than or equal to 500 copies/mL, while having been treated with an association of three or more antiretrovirals for at least three months and during the interval between the two viral load measurements;
  - and
  - who previously received at least one other antiretroviral treatment that resulted in a documented virological failure after at least three months of treatment;
  - and
  - who have tried, since the beginning of their antiretroviral therapy, at least one non-nucleoside reverse transcriptase inhibitor (except in the presence of a resistance to that class), one nucleoside reverse transcriptase inhibitor and one protease inhibitor.

The maximum duration of the initial authorization is five months.

Upon subsequent requests, the physician must provide evidence of a beneficial effect:

- on a recent viral load measurement, showing a reduction of at least 0.5 log compared with the viral load measurement obtained before the enfuvirtide treatment began;
- or
- on a recent CD4 count, showing an increase of at least 30% compared with the CD4 count obtained before the enfuvirtide treatment began.

Authorizations will then have a maximum duration of 12 months.

#### ENZALUTAMIDE:

- ◆ as monotherapy, for treatment of metastatic castration-resistant prostate cancer in persons:
  - whose cancer has progressed during or following docetaxel-based chemotherapy, unless there is a contraindication or serious intolerance;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

It must be noted that enzalutamide is not authorized after failure with an androgen synthesis inhibitor or a second-generation androgen receptor inhibitor if it was administered for treatment of prostate cancer.

- ◆ as monotherapy, for treatment of metastatic castration-resistant prostate cancer in persons:
  - who are asymptomatic or mildly symptomatic after an anti-androgen treatment has failed;
  - and
  - who have never received docetaxel-based chemotherapy;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

It must be noted that enzalutamide is not authorized after failure with an androgen synthesis inhibitor or a second-generation androgen receptor inhibitor if it was administered for treatment of prostate cancer.

- ◆ for treatment of non-metastatic castration-resistant prostate cancer, in persons:
  - exposed to a high risk of developing metastases despite an androgenic privation treatment. High risk is defined by a prostate-specific antigen doubling time  $\leq 10$  months;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression.

#### ★ EPLERENONE:

- ◆ for persons showing signs of heart failure and left ventricular systolic dysfunction (with ejection fraction  $\leq 40\%$ ) after an acute myocardial infarction, when initiation of eplerenone starts in the days following the infarction as a complement to standard therapy.
- ◆ for persons suffering from New York Heart Association (NYHA) class II chronic heart failure with left ventricular systolic dysfunction (with ejection fraction  $\leq 35\%$ ), as a complement to standard therapy.

#### EPOETIN ALFA:

- ◆ for treatment of anemia related to severe chronic renal failure (creatinine clearance less than or equal to 35 mL/min).

- ◆ for treatment of chronic and symptomatic non-hemolytic anemia not caused by an iron, folic acid or vitamin B<sub>12</sub> deficiency:
  - in persons having a non-myeloid tumour treated with chemotherapy and whose hemoglobin rate less than 100 g/L;
  - in non cancerous persons whose hemoglobin rate is less than 100 g/L.

The maximum duration of the initial authorization is three months. When requesting continuation of treatment, the physician must provide evidence of a beneficial effect defined by an increase in the reticulocyte count of at least  $40 \times 10^9/L$  or an increase in the hemoglobin measurement of at least 10 g/L. A hemoglobin rate of less than 120g/L should be targeted.

However, for persons suffering from cancer other than those previously specified, epoetin alfa remains covered by the basic prescription drug insurance plan until 31 January 2008 insofar as the treatment was already underway on 1 October 2007 and that its cost was already covered under that plan as part of the recognized indications provided in the appendix hereto and that the physician provides evidence of a beneficial effect defined by an increase in the reticulocyte count of at least  $40 \times 10^9/L$  or an increase in the hemoglobin measurement of at least 10 g/L.

#### EPOPROSTENOL SODIUM:

- ◆ for treatment of pulmonary arterial hypertension of WHO functional class III or IV that is either idiopathic or associated with connectivitis and that is symptomatic despite the optimal conventional treatment.

Persons must be evaluated and followed up on by physicians working at designated centres specializing in the treatment of pulmonary arterial hypertension.

#### ERLOTINIB HYDROCHLORIDE:

- ◆ for treatment of locally advanced or metastatic non-small-cell lung cancer in persons:
  - for whom a first-line therapy has failed and who are not eligible for other chemotherapy, or for whom a second-line therapy has failed;
  - and
  - who do not have symptomatic cerebral metastases;
  - and
  - whose ECOG performance status is  $\leq 3$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

#### ESLICARBAZEPINE ACETATE:

- ◆ for adjunctive treatment of persons suffering from refractory partial epilepsy, that is, following the failure of two appropriate and tolerated antiepileptic drugs (used either as monotherapy or in combination).

#### ESTRADIOL-17B:

- ◆ in persons unable to take estrogens orally because of intolerance or where medical factors favour the

transdermal route.

ESTRADIOL-17B / NORETHINDRONE ACETATE:

- ◆ in persons unable to take estrogens or progestogens orally because of intolerance or where medical factors favour the transdermal route.

ETANERCEPT:

- ◆ for treatment of moderate or severe rheumatoid arthritis and moderate or severe psoriatic arthritis of the rheumatoid type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor for rheumatoid arthritis only;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is a serious intolerance or a contraindication, one of the two drugs must be:

for rheumatoid arthritis:

- methotrexate at a dose of 20 mg or more per week;

for psoriatic arthritis of the rheumatoid type:

- methotrexate at a dose of 20 mg or more per week;

or

- sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for etanercept are given for a dose of 50 mg per week.

- ◆ for treatment of moderate or severe juvenile idiopathic arthritis (juvenile rheumatoid arthritis and juvenile chronic arthritis) of the polyarticular or systemic type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have five or more joints with active synovitis and one of the following two elements must be present:
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with methotrexate at a dose of 15 mg/m<sup>2</sup> or more (maximum dose of 20 mg) per week for at least three months, unless there is an intolerance or a contraindication.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of 20% or more in the number of joints with active synovitis and one of the following six elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - an decrease of 0.13 in the Childhood Health Assessment Questionnaire (CHAQ) score or a return to school;
  - an improvement of at least 20% in the physician's overall assessment (visual analogue scale);
  - an improvement of at least 20% in the person's or parent's overall assessment (visual analogue scale);
  - a decrease of 20% or more in the number of affected joints with limited movement.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for etanercept are given for 0.8 mg/kg (maximum dose of 50 mg) per week.

- ◆ for treatment of moderate or severe psoriatic arthritis of a type other than rheumatoid.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have at least three joints with active synovitis and a score of more than 1 on the Health Assessment Questionnaire (HAQ);
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is a serious intolerance or a contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week;
- or
- sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for etanercept are given for a dose of 50 mg per week.

- ◆ for treatment of persons suffering from moderate or severe ankylosing spondylitis whose BASDAI score is  $\geq 4$  on a scale of 0 to 10 and in whom the sequential use of two non-steroidal anti-inflammatories at the optimal dose for a period of three months each did not adequately control the disease, unless there is a contraindication.

- Upon the initial request, the physician must provide the following information:
  - the BASDAI score;
  - the degree of functional injury according to the BASFI (scale of 0 to 10).

The initial request will be authorized for a maximum of five months.

- When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:
  - a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;
  - or
  - a decrease of 1.5 points or 43% on the BASFI scale;
  - or
  - a return to work.

Requests for continuation of treatment will be authorized for maximum periods of 12 months.

Authorizations for etanercept are given for a maximum of 50 mg per week.

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis:
  - in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or of large plaques on the face, palms or soles or in the genital area;
  - and
  - in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;
  - and
  - where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;
  - and
  - where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of a serious intolerance or a contraindication, these two agents must be:
    - methotrexate at a dose of 15 mg or more per week;
    - or
    - cyclosporine at a dose of 3 mg/kg or more per day;
    - or
    - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base values;
- or
- significant improvement in lesions on the face, palms or soles or in the genital area compared to the pre-treatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for etanercept are given for a maximum of 50 mg, twice per week.

#### ETANERCEPT – RHEUMATOID ARTHRITIS AND ANKYLOSING SPONDYLITIS (BRENZYS):

- ◆ for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with one disease-modifying anti-rheumatic drug, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week;

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for etanercept are given for a dose of 50 mg per week.

- ◆ for treatment of persons suffering from moderate or severe ankylosing spondylitis whose BASDAI score is  $\geq 4$  on a scale of 0 to 10 and in whom the sequential use of two non-steroidal anti-inflammatories at the optimal dose for a period of three months each did not adequately control the disease, unless there is a contraindication.
- Upon the initial request, the physician must provide the following information:
  - the BASDAI score;
  - the degree of functional injury according to the BASFI (scale of 0 to 10).

The initial request will be authorized for a maximum of five months.

- When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:
  - a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;or
  - a decrease of 1.5 points or 43% on the BASFI scale;or
  - a return to work.

Requests for continuation of treatment will be authorized for maximum periods of 12 months.

Authorizations for etanercept are given for a maximum of 50 mg per week.

ETANERCEPT – RHEUMATOID ARTHRITIS, ANKYLOSING SPONDYLITIS, JUVENILE IDIOPATHIC ARTHRITIS, PSORIATIC ARTHRITIS AND PLAQUE PSORIASIS (ERELZI):

- ◆ for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is a serious intolerance or a contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week;

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for etanercept are given for a dose of 50 mg per week.

- ◆ for treatment of persons suffering from moderate or severe ankylosing spondylitis whose BASDAI score is  $\geq 4$  on a scale of 0 to 10 and in whom the sequential use of two non-steroidal anti-inflammatories at the optimal dose for a period of three months each did not adequately control the disease, unless there is a contraindication.
- Upon the initial request, the physician must provide the following information:
  - the BASDAI score;
  - the degree of functional injury according to the BASFI (scale of 0 to 10).

The initial request will be authorized for a maximum of five months.

- When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:
  - a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;
  - or
  - a decrease of 1.5 points or 43% on the BASFI scale;
  - or

- a return to work.

Requests for continuation of treatment will be authorized for maximum periods of 12 months.

Authorizations for etanercept are given for a maximum of 50 mg per week.

- ◆ for treatment of moderate or severe juvenile idiopathic arthritis (juvenile rheumatoid arthritis and juvenile chronic arthritis) of the polyarticular or systemic type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have five or more joints with active synovitis and one of the following two elements must be present:
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with methotrexate at a dose of 15 mg/m<sup>2</sup> or more (maximum dose of 20 mg) per week for at least three months, unless there is intolerance or a contraindication.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of 20% or more in the number of joints with active synovitis and one of the following six elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - an decrease of 0.13 in the Childhood Health Assessment Questionnaire (CHAQ) score or a return to school;
  - an improvement of at least 20% in the physician's overall assessment (visual analogue scale);
  - an improvement of at least 20% in the person's or parent's overall assessment (visual analogue scale);
  - a decrease of 20% or more in the number of affected joints with limited movement.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for etanercept are given for 0.8 mg/kg (maximum dose of 50 mg) per week.

- ◆ for treatment of moderate or severe psoriatic arthritis of the rheumatoid type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following four elements must be present:
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is a serious intolerance or a contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week;
- or
- sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for etanercept are given for a dose of 50 mg per week.

- ◆ for treatment of moderate or severe psoriatic arthritis of a type other than rheumatoid.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have at least three joints with active synovitis and a score of more than 1 on the Health Assessment Questionnaire (HAQ);  
and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is a serious intolerance or a contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week;
  - or
  - sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for etanercept are given for a dose of 50 mg per week.

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis:

- in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or of large plaques on the face, palms or soles or in the genital area;  
and
- in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;  
and
- where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;  
and

- where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of a serious intolerance or a contraindication, these two agents must be:
  - methotrexate at a dose of 15 mg or more per week;
  - or
  - cyclosporine at a dose of 3 mg/kg or more per day;
  - or
  - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base values;
- or
- significant improvement in lesions on the face, palms or soles or in the genital area compared to the pre-treatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for etanercept are given for a maximum of 50 mg, twice per week.

#### ETRAVIRINE:

- ◆ for treatment, in association with other antiretrovirals, of HIV-infected persons:
  - who have tried, since the beginning of their antiretroviral therapy, at least one therapy that included delavirdine, efavirenz or nevirapine, unless there is a primary resistance to one of those drugs, and that resulted:
    - in a documented virological failure, after at least three months of treatment with an association of several antiretroviral agents;
    - or
    - in serious intolerance to one of those agents, to the point of calling into question the continuation of the antiretroviral treatment;
  - and
  - who have tried, since the beginning of their antiretroviral therapy, at least one therapy that included a protease inhibitor and that resulted:
    - in a documented virological failure, after at least three months of treatment with an association of several antiretroviral agents;
    - or
    - in serious intolerance to at least three protease inhibitors, to the point of calling into question the continuation of the antiretroviral treatment.

Where a therapy including another non-nucleoside reverse transcriptase inhibitor cannot be used because of a primary resistance to delavirdine, efavirenz or nevirapine, a trial of at least two therapies, each including a protease inhibitor, is necessary and must have resulted in the same conditions as those listed above.

- ◆ for first-line treatment, in association with other antiretrovirals, of HIV-infected persons for whom a laboratory test showed a resistance to at least one nucleoside reverse transcriptase inhibitor, one non-nucleoside reverse transcriptase inhibitor and one protease inhibitor, and:

- whose current viral load and another dating back at least one month are greater than or equal to 500 copies/mL;
- and
- whose current CD4 lymphocyte count and another dating back at least one month are less than or equal to 350/ $\mu$ L;
- and
- for whom the use of etravirine is necessary to establish an effective therapeutic regimen.

#### EVEROLIMUS:

- ◆ for second-line treatment of a metastatic renal adenocarcinoma characterized by the presence of clear cells after treatment with a tyrosine kinase inhibitor has failed, unless there is a contraindication or a serious intolerance, in persons whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

- ◆ in association with exemestane, for treatment of advanced or metastatic breast cancer, positive for hormone receptors but not over-expressing the HER2 receptor, in menopausal women:
  - whose cancer has progressed despite administration of a non-steroid aromatase inhibitor (anastrozole or letrozole) administered in an adjuvant or metastatic context;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

- ◆ for treatment of well-differentiated, non-functional neuroendocrine tumours of lung or gastrointestinal origin that are unresectable and at an advanced or metastatic phase, in persons:
  - whose disease progressed in the six previous months;
  - and
  - whose ECOG performance status is 0 or 1.

The initial authorization is for a maximum duration of four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging. Subsequent authorizations will be for durations of six months.

- ◆ for treatment of unresectable and evolutive, well or moderately-differentiated pancreatic neuroendocrine tumours, at an advanced or metastatic stage, in persons whose ECOG performance status is  $\leq 2$ .

The initial authorization is for a maximum duration of four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging. Subsequent authorizations will be for durations of six months.

It must be noted that everolimus will not be authorized in association with sunitinib, nor will it be following failure with sunitinib if it was administered to treat pancreatic neuroendocrine tumours.

#### EVOLOCUMAB:

- ◆ for treatment of persons suffering from homozygous familial hypercholesterolemia (HoFH) confirmed by genotyping or by phenotyping:
  - where two hypolipemians of different classes at optimal doses are not tolerated, are contraindicated or are ineffective;

Phenotyping is defined by the following three factors:

- a concentration in the low-density lipoprotein cholesterol (LDL-C)  $> 13$  mmol/l before the beginning of a treatment;
- the presence of xanthomas before age 10;
- the confirmed presence in both parents of heterozygous familial hypercholesterolemia.

The initial request is granted for a maximum period of four months.

Upon subsequent requests, the physician must provide information making it possible to establish the beneficial effects of the treatment, that is, a decrease of at least 20% in the LDL-C compared to the basic levels. Subsequent requests are authorized for a maximum duration of 12 months.

Authorizations for evolocumab are given for a maximum dose of 420 mg every two weeks.

- ◆ for treatment of adults suffering from heterozygous familial hypercholesterolemia (HeFH) confirmed by genotyping or by phenotyping, for whom use of a statin at the optimal dose in association with ezetimibe has not allowed for adequate control of the cholesterolemia, unless there is a serious intolerance or a contraindication.

In patients without atherosclerotic cardiovascular disease, adequate control of the cholesterolemia is defined as a reduction in the LDL-C concentration of at least 50% compared to the basic level, that is, before any lipid lowering drug treatment.

In patients with atherosclerotic cardiovascular disease, adequate control of the cholesterolemia is defined as the attainment of a LDL-C concentration of  $< 2$  mmol/l.

Phenotyping is defined as a LDL-C concentration  $> 4$  mmol/l in children under age 16 or  $> 4.9$  mmol/l in adults before the beginning of a treatment and at least one of the following:

- a history of HeFH confirmed by genotyping in a first-degree relative;
- the presence of a mutation, causing a familial hypercholesterolemia, of the LDLR, ApoB or PCSK9 genes in a first-degree relative;
- the presence of xanthomas in the person or in one of the first-degree or second-degree relatives;
- the presence of a corneal arcus before age 45 in a first-degree relative;
- a family history of LDL-C concentration  $> 4.9$  mmol/l in an adult first-degree relative or  $\geq 4$  mmol/l in a first-degree relative under age 18;
- a family history of total cholesterol concentration  $> 7.5$  mmol/l in an adult first-degree or second-degree relative or  $> 6.7$  mmol/l in a first-degree relative under age 16.

The initial request is authorized for a maximum period of four months.

Upon subsequent requests, the physician must provide information making it possible to establish the beneficial clinical effects of the treatment, that is, a decrease  $\geq 40$  % in the LDL-C concentration compared to the value before the beginning of treatment with evolocumab. Subsequent requests are authorized for a maximum duration of 12 months.

Authorizations for evolocumab are given for a maximum dose of 140 mg every two weeks or 420 mg every month.

FEBUXOSTAT:

- ◆ for treatment of persons with complications stemming from chronic hyperurcemia, such as urate deposits revealed by tophus or arthritic gout, when there is a serious contraindication or serious intolerance to allopurinol.

FESOTERODINE fumarate:

- ◆ for treatment of vesical hyperactivity in persons for whom at least one of the antimuscarinic agents indicated in the regular section of the List is poorly tolerated, contraindicated or ineffective.

★ FIDAXOMICIN:

- ◆ for treatment of a Clostridium difficile infection in the event of allergy to vancomycin.

★ FILGRASTIM:

- ◆ for treatment of persons undergoing cycles of moderately or highly myelosuppressive chemotherapy ( $\geq 40$  percent risk of febrile neutropenia).
- ◆ for treatment of persons at risk of developing severe neutropenia during chemotherapy.
- ◆ in subsequent cycles of chemotherapy, for treatment of persons having suffered from severe neutropenia (neutrophil count below  $0.5 \times 10^9/L$ ) during the first cycles of chemotherapy and for whom a reduction in the antineoplastic dose is inappropriate.
- ◆ in subsequent cycles of curative chemotherapy, for treatment of persons having suffered from neutropenia (neutrophil count below  $1.5 \times 10^9/L$ ) during the first cycles of chemotherapy and for whom a reduction in the dose or a delay in the chemotherapy administration plan is unacceptable.
- ◆ during chemotherapy undergone by children suffering from solid tumours.
- ◆ for treatment of persons suffering from severe medullary aplasia (neutrophil count below  $0.5 \times 10^9/L$ ) and awaiting curative treatment by means of a bone marrow transplant or with antithymocyte serum.
- ◆ for treatment of persons suffering from congenital, hereditary, idiopathic or cyclic chronic neutropenia whose neutrophil count is below  $0.5 \times 10^9/L$ .
- ◆ for treatment of HIV-infected persons suffering from severe neutropenia (neutrophil count below  $0.5 \times 10^9/L$ ).
- ◆ to stimulate bone marrow in the recipient in the case of an autograft.
- ◆ as an adjunctive treatment for acute myeloid leukemia.

FINGOLIMOD HYDROCHLORIDE:

- ◆ for monotherapy treatment of persons suffering from rapidly evolving relapsing multiple sclerosis, whose EDSS score is less than 7, and who had to cease taking natalizumab for medical reasons.

Authorizations are granted for a maximum of one year. Upon subsequent requests, the EDSS score must remain under 7.

- ◆ for treatment, as monotherapy, of persons suffering from relapsing multiple sclerosis whose EDSS score is under 7:
  - who have had at least one relapse in the last year, one of which occurred even though the person had been taking, for at least six months, one of the disease modifying agents included on the list of medications for first-line treatment of this disease;or

- who have a contraindication or an intolerance to at least two disease-modifying agents included on the list of medications for first-line treatment of this disease.

The maximum duration of each authorization is one year. When requesting continuation of treatment, the physician must provide proof of a beneficial effect defined by the absence of deterioration. The EDSS score must remain under 7.

#### FLUCONAZOLE, Oral Susp.:

- ◆ for treatment of esophageal candidiasis.
- ◆ for treatment of oropharyngeal candidiasis or other mycoses in persons for whom the conventional therapy is ineffective or poorly tolerated and who are unable to take fluconazole tablets.

#### FOLLITROPIN ALPHA:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are granted for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.
- ◆ Authorizations are granted for a maximum duration of one year.

#### FOLLITROPIN BETA:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are given for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.

Authorizations are granted for a maximum duration of one year.

#### FOLLITROPIN DELTA:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are granted for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.

Authorizations are granted for a maximum duration of one year.

#### FORMOTEROL FUMARATE DIHYDRATE / BUDESONIDE:

- ◆ for treatment of asthma and other reversible obstructive diseases of the respiratory tract in persons whose control of the disease is insufficient despite the use of an inhaled corticosteroid.

The associations of formoterol fumarate dihydrate / budesonide and salmeterol xinafoate / fluticasone propionate remain covered for persons insured with RAMQ who obtained a reimbursement in the 365 days preceding 1 October 2003.

- ◆ for maintenance treatment of moderate or severe chronic obstructive pulmonary disease (COPD) in persons:
  - who have shown at least two exacerbations of the symptoms of the disease in the last year, despite regular use through inhalation of two long-acting bronchodilators in association. Exacerbation is understood as a sustained and repeated aggravation of the symptoms requiring intensified pharmacological treatment, for instance, the addition of oral corticosteroids, a precipitated medical visit or a hospitalization;
  - or
  - who have shown at least one exacerbation of the symptoms of the disease in the last year that required hospitalization, despite regular use through inhalation of two long-acting bronchodilators in association;
  - or
  - whose disease is associated with an asthmatic component, demonstrated by factors defined by a history of asthma or atopy during childhood, by high blood eosinophilia or by an improvement in the FEV1 after bronchodilators of at least 12% and 200 ml.

The initial authorization is for a maximum duration of 12 months.

For a subsequent request, for persons having obtained the treatment due to exacerbations, the authorization may be granted if the physician considers that the expected benefits outweigh the risks incurred. For persons having obtained the treatment due to an asthmatic component, the physician will have to provide proof of an improvement of the disease symptoms.

It must be noted that this association (long-acting  $\beta_2$  agonist and inhaled corticosteroid) must not be used concomitantly with a long-acting  $\beta_2$  agonist alone or with an association of a long-acting  $\beta_2$  agonist and a long-acting antimuscarinic.

Nevertheless, the association of formoterol fumarate dihydrate / budesonide remains covered under the basic prescription drug insurance plan for insured persons having used this drug in the 12 months preceding 24 March 2016.

#### FORMOTEROL FUMARATE DIHYDRATE / MOMETASONE FUROATE:

- ◆ for treatment of asthma and other reversible obstructive diseases of the respiratory tract, in persons whose control of the disease is insufficient despite the use of an inhaled corticosteroid.

#### FULVESTRANT:

- ◆ for treatment of advanced or metastatic breast cancer, according to the recognized indication for palbociclib.
- ◆ for treatment of persons suffering from unresectable locally advanced or metastatic breast cancer, according to the recognized indication for ribociclib.

#### GALANTAMINE HYDROBROMIDE:

- ◆ as monotherapy for persons suffering from Alzheimer's disease at the mild or moderate stage.  
Upon the initial request, the following elements must be present:
  - an MMSE score of 10 to 26, or as high as 27 or 28 if there is proper justification;
  - medical confirmation of the degree to which the person is affected (intact domain, mildly, moderately or severely affected) in the following five domains:
    - intellectual function, including memory;
    - mood;
    - behaviour;
    - autonomy in activities of daily living (ADL) and in instrumental activities of daily living (IADL);
    - social interaction, including the ability to carry on a conversation.

The duration of an initial authorization for treatment with galantamine is six months from the beginning of treatment.

However, where the cholinesterase inhibitor is used following treatment with memantine, the concomitant use of both medications is authorized for one month.

Upon subsequent requests, the physician must provide evidence of a beneficial effect confirmed by each of the following elements:

- an MMSE score of 10 or more, unless there is proper justification;
- a maximum decrease of 3 points in the MMSE score per six-month period compared with the previous evaluation, or a greater decrease accompanied by proper justification;
- stabilization or improvement of symptoms in one or more of the following domains:
  - intellectual function, including memory;
  - mood;
  - behaviour;
  - autonomy in activities of daily living (ADL) and in instrumental activities of daily living (IADL);
  - social interaction, including the ability to carry on a conversation.

The maximum duration of authorization is 12 months.

#### GANIRELIX:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are given for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.

Authorizations are granted for a maximum duration of one year.

#### GEFITINIB:

- ◆ for first-line treatment of persons suffering from a locally advanced or metastatic non-small-cell lung cancer, having an activating mutation of the EGFR tyrosine kinase and whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

#### GENTAMICIN sulfate:

- ◆ for treatment of bacterial endocarditis.

#### GLATIRAMER ACETATE - (GLATECT):

- ◆ for treatment of persons who have had a documented first acute clinical episode of demyelination.

At the beginning of treatment, the physician must provide the results of an MRI showing:

- the presence of at least one non-symptomatic hyperintense T2 lesion affecting at least two of the following four regions: periventricular, juxtacortical, infratentorial, or spinal cord;  
and
- the diameter of these lesions being 3 mm or more.

The maximum duration of the initial authorization is one year. When submitting subsequent requests, the physician must provide evidence of a beneficial effect defined by the absence of a new clinical episode.

- ◆ for treatment of persons suffering from relapsing multiple sclerosis who have had one relapse in the last year and whose EDSS score is less than 7.

Authorization of the initial request is granted for a maximum of one year. The same duration applies to requests for continuation of treatment. In these latter cases, however, the physician must provide proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

#### GLECAPREVIR / PIBRENTASVIR:

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C who have never received an anti-HCV treatment and who do not have decompensated cirrhosis.

Authorization is granted for a maximum period of eight weeks.

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C genotype 1, 2, 4, 5 or 6, who have experienced therapeutic failure with a treatment based on pegylated interferon alfa or based on sofosbuvir, but who have never been treated with an NS3/4A protease inhibitor nor with an NS5A protein inhibitor.

Authorization is granted for a maximum period of eight weeks for persons without cirrhosis and for a maximum period of 12 weeks for persons with compensated cirrhosis (Metavir score of F4 or equivalent).

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C genotype 3, without decompensated cirrhosis, and who have experienced therapeutic failure with an association of ribavirin/pegylated interferon alfa or with an association of sofosbuvir/ribavirin, but who have never been treated with an NS3/4A protease inhibitor nor with an NS5A protein inhibitor.

Authorization is granted for a maximum period of 16 weeks.

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C genotype 1, without decompensated cirrhosis, and who have experienced therapeutic failure with an NS3/4A protease inhibitor, but who have never been treated with an NS5A protein inhibitor.

Authorization is granted for a maximum period of 12 weeks.

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C genotype 1, without decompensated cirrhosis, and who have experienced therapeutic failure with an NS5A protein inhibitor, but who have never been treated with an NS3/4A protease inhibitor.

Authorization is granted for a maximum period of 16 weeks.

#### GLIMEPIRIDE:

- ◆ where another sulfonylurea is not tolerated or is ineffective.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA1c) adapted to the patient.

#### GLUCOSE MEASUREMENT EQUIPMENT:

for self-monitoring of glycemia in diabetic persons aged 18 or over, who fulfil the following two criteria:

- intensive insulin therapy (treatment by insulin pump or  $\geq 3$  insulin injections per day);  
and
- frequent episodes of hypoglycemia in the last year, despite compliance with a glycemic management plan.

The initial request is authorized for a period of 6 months to assess the ability of patients to use FreeStyle Libre™ and wear the sensor.

Requests for continuation of treatment are authorized for a maximum period of 12 months if the person shows optimal use of FreeStyle Libre™, i.e. at least 70% of the time.

GLYCERIN, Supp.:

- ◆ for treatment of constipation related to a medical condition.

GLYCEROL PHENYLBUTYRATE :

- ◆ in association with dietary protein restriction, for treatment of patients suffering from an urea cycle disorder, except in the presence of a *N*-acetylglutamate synthase deficiency, whose plasma ammonia level is inadequate despite treatment with sodium benzoate at an optimal dose, unless there is an important intolerance or a contraindication to this drug.

The maximum duration of each authorization is 12 months. When requesting continuation of treatment, the physician must provide proof of a beneficial clinical effect.

GOLIMUMAB, S.C. Inj. Sol. (App.) and S.C. Inj. Sol. (syr):

- ◆ for treatment of moderate or severe rheumatoid arthritis and moderate or severe psoriatic arthritis of rheumatoid type. In the case of rheumatoid arthritis, methotrexate must be use concomitantly.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each.

In the case of rheumatoid arthritis, one of the two drugs must be methotrexate, at a dose of 20 mg or more per week, unless there is serious intolerance or a contraindication to this dose.

In the case of moderate or severe psoriatic arthritis of rheumatoid type, unless there is serious intolerance or a contraindication, one of the two drugs must be:

- methotrexate at a dose of 20 mg or more per week;
- or
- sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for golimumab are given for 50 mg per month.

- ◆ for treatment of moderate or severe psoriatic arthritis of a type other than rheumatoid.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have at least three joints with active synovitis and a score of more than 1 on the Health Assessment Questionnaire (HAQ);  
and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week;
  - or
  - sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for golimumab are given for 50 mg per month.

- ◆ for treatment of persons suffering from moderate or severe ankylosing spondylitis whose BASDAI score is  $\geq 4$  on a scale of 0 to 10 and in whom the sequential use of two non-steroidal anti-inflammatories at the optimal dose for a period of three months each did not adequately control the disease, unless there is a contraindication:
  - Upon the initial request, the physician must provide the following information:
    - the BASDAI score;
    - the degree of functional injury according to the BASFI (scale of 0 to 10).

The initial request will be authorized for a maximum of five months.

- When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:
  - a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;
  - or
  - a decrease of 1.5 points or 43% on the BASFI scale;
  - or
  - a return to work.

Requests for continuation of treatment will be authorized for maximum periods of 12 months.

Authorizations for golimumab are given for 50 mg per month.

#### GOLIMUMAB, I.V. Perf. Sol.:

- ◆ in association with methotrexate, for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used concomitantly or not, for at least three months each. One of the two drugs must be methotrexate, at a dose of 20 mg or more per week, unless there is serious intolerance or a contraindication to this dose.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the treatment's beneficial effects, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for golimumab are given for a dose of 2 mg/kg in weeks 0 and 4, then 2 mg/kg every eight weeks.

#### GONADORELIN:

- ◆ as monotherapy, for ovulation induction in women suffering from hypogonadotropic hypogonadism who wish to procreate.

Authorizations are granted for a maximum duration of one year.

#### GONADOTROPINS:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are given for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.

Authorizations are granted for a maximum duration of one year.

- ◆ for spermatogenesis induction in men suffering from hypogonadotropic hypogonadism who wish to procreate, in association with a chorionic gonadotropin.

The men must previously have been treated with a chorionic gonadotropin, as monotherapy, for at least six months.

Authorizations are granted for a maximum duration of one year.

★ GRANISETRON HYDROCHLORIDE:

- ◆ during the first day of a moderately or highly emetic chemotherapy treatment;
- ◆ during a moderately or highly emetic radiotherapy treatment.
- ◆ in children during emetic chemotherapy or radiotherapy.
- ◆ during:
  - a chemotherapy treatment undergone by persons for whom the conventional antiemetic therapy is ineffective, contraindicated or poorly tolerated and who are not receiving aprepitant or fosaprepitant;
  - or
  - a radiotherapy treatment undergone by persons for whom the conventional antiemetic therapy is ineffective, contraindicated or poorly tolerated.

GRASS POLLEN ALLERGENIC EXTRACT:

- ◆ for treatment of the symptoms of moderate or severe seasonal allergic rhinitis associated with grass pollen.

The maximum duration of the authorization with oral allergenic grass pollen extracts is for three consecutive pollen seasons, regardless of the product used.

It must be noted that grass pollen allergenic extracts are not authorized in association with subcutaneous immunotherapy.

GUANFACINE HYDROCHLORIDE:

- ◆ in association with a psychostimulant, for treatment of children and adolescents suffering from attention deficit disorder with or without hyperactivity, for whom it has not been possible to properly control the symptoms of the disease with methylphenidate and an amphetamine used as monotherapy.

Before it can be concluded that the effectiveness of these drugs is sub optimal, they must have been titrated at optimal doses.

HYDROXYPROPYLMETHYLCELLULOSE:

- ◆ for treatment of keratoconjunctivitis sicca or other severe conditions accompanied by markedly reduced tear production.

HYDROXYPROPYLMETHYLCELLULOSE / DEXTRAN 70:

- ◆ for treatment of keratoconjunctivitis sicca or other severe conditions accompanied by markedly reduced tear production.

IBRUTINIB:

- ◆ for first-line treatment of chronic lymphoid leukemia in persons with 17p deletion:
  - who are symptomatic and requiring treatment;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

Authorization is given for a maximum daily dose of 420 mg.

- ◆ as monotherapy, for first-line treatment of symptomatic chronic lymphoid leukemia in persons not having a 17p deletion:
  - who are not eligible to receive fludarabine-based chemotherapy because their health condition is too precarious, notably due to advanced age, altered renal function or a total score  $\geq 6$  on the Cumulative Illness Rating Scale (CIRS);  
and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

Authorization is given for a maximum daily dose of 420 mg.

- ◆ for second-line or subsequent treatment of chronic lymphoid leukemia in persons:
  - who do not qualify for a treatment containing a purine analog for one of the following reasons:
    - excessively precarious state of health due to, notably, old age, altered renal function or a score of 6 or greater on the Cumulative Illness Rating Scale (CIRS);
    - interval without progress of less than 36 months following a treatment combining fludarabine and rituximab;
    - 17p deletion;
    - serious intolerance;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

Authorization is given for a maximum daily dose of 420 mg.

- ◆ as monotherapy, for treatment of recurrent or refractory mantle-cell lymphoma, in persons:
  - who have received at least one rituximab-based treatment;  
and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

Authorization is given for a maximum daily dose of 560 mg.

#### ICATIBANT ACETATE:

- ◆ for treatment of acute attacks of hereditary angioedema (HAE) with C1 esterase inhibitor deficiency in adults:

- whose diagnosis of HAE type I or II was confirmed by an antigen dosage or a functional dosage of the C1 esterase inhibitor below the lower limit of normal;
- and
- having suffered at least one medically-confirmed acute attack of HAE.

Authorizations will be given for a maximum of twelve syringes of icatibant per 12 month period.

#### IDELALISIB:

- ◆ as monotherapy, for the continuation of second-line or subsequent treatment of chronic lymphoid leukemia in persons whose disease has not progressed during an eight-cycle treatment combining idelalisib and rituximab.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

#### IMATINIB MESYLATE:

- ◆ for treatment of chronic myeloid leukemia in the chronic phase.
- ◆ for treatment of chronic myeloid leukemia in the blastic or accelerated phase.
- ◆ for treatment of adults suffering from refractory or recurrent acute lymphoblastic leukemia with a positive Philadelphia chromosome and for whom a stem cell transplant is foreseeable.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a hematologic response.

- ◆ for treatment of acute lymphoblastic leukemia newly diagnosed in an adult, with a positive Philadelphia chromosome, after parenteral chemotherapy, specifically, during the maintenance phase.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a hematologic response.

#### IMATINIB MESYLATE – gastrointestinal stromal tumour:

- ◆ for adjuvant treatment of a gastrointestinal stromal tumor with presence of the Kit receptor (CD117) that, following a complete resection, poses a high risk of recurrence.

The maximum duration of the authorization is 36 months.

- ◆ for treatment of an inoperable, recurrent or metastatic gastrointestinal stromal tumour with presence of the c-kit receptor (CD117).

The maximum duration of each authorization is six months.

The initial authorization is for a daily dose of 400 mg. For persons whose recurrence appeared during adjuvant treatment with imatinib, the initial authorization may be for a daily dose of up to 800 mg.

An authorization for a daily dose of up to 800 mg may be obtained with evidence of disease progression, confirmed by imaging, after at least three months of treatment at a daily dose of 400 mg.

When requesting continuation of treatment, the physician must provide evidence of a complete or partial response or of disease stabilization, confirmed by imaging.

#### IMIQUIMOD:

- ◆ for treatment of external genital and peri-anal condylomas, as well as condyloma acuminata, upon failure of physical destructive therapy or of chemical destructive therapy of a minimum duration of four weeks, unless there is a contraindication.

The maximum duration of the initial authorization is 16 weeks. When requesting continuation of treatment, the physician must provide evidence of a beneficial effect defined by a reduction in the extent of the lesions. The request may then be authorized for a maximum period of 16 weeks.

#### INCOBOTULINUMTOXINA:

- ◆ for treatment of cervical dystonia, blepharospasm and other severe spasticity conditions.

#### INDACATEROL MALEATE / GLYCOPYRRONIUM BROMIDE:

- ◆ for maintenance treatment of persons suffering from chronic obstructive pulmonary disease (COPD), for whom using a long-acting bronchodilator for at least 3 months has not allowed an adequate control of the symptoms of the disease.

The initial authorization is given for a maximum duration of 6 months. For a subsequent request, the physician will have to provide proof of a beneficial clinical effect.

It must be noted that this association (long-acting  $\beta_2$  agonist and long-acting antimuscarinic) must not be used concomitantly with a long-acting bronchodilator (long-acting  $\beta_2$  agonist or long-acting antimuscarinic) alone or in association with an inhaled corticosteroid.

Nevertheless, the association of indacaterol maleate / glycopyrronium bromide remains covered under the basic prescription drug insurance plan for insured persons having used this drug in the 12 months preceding 24 March 2016.

#### INFLIXIMAB (REMICADE):

- ◆ for treatment of moderate or severe juvenile idiopathic arthritis (juvenile rheumatoid arthritis and juvenile chronic arthritis) of the polyarticular or systemic type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have five or more joints with active synovitis and one of the following two elements must be present:
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with methotrexate at a dose of 15 mg/m<sup>2</sup> or more (maximum 20 mg per dose) per week for at least three months, unless there is an intolerance or a contraindication.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following six elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - an improvement of 0.13 in the Childhood Health Assessment Questionnaire (CHAQ) score or a return to school;

- an improvement of at least 20% in the physician's overall assessment (visual analogue scale);
- an improvement of at least 20% in the person's or parent's overall assessment (visual analogue scale);
- a decrease of 20% or more in the number of affected joints with limited movement.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for infliximab are given for three doses of 3 mg/kg, with the possibility of increasing the dose to 5 mg/kg after three doses or in the 14th week.

#### INFLIXIMAB:

- ◆ for treatment of adults suffering from moderate or severe intestinal Crohn's disease that is still active despite treatment with corticosteroids and immunosuppressors, unless there is a contraindication or a major intolerance to corticosteroids. An immunosuppressor must have been tried for at least eight weeks.

The initial authorization is for a maximum of three 5 mg/kg doses.

Upon the initial request, the physician must indicate the immunosuppressor used and the duration of treatment. Upon subsequent requests, the physician must provide evidence of a beneficial clinical effect, in which case the request will be authorized for a period of 12 months.

- ◆ for treatment of adults suffering from moderate or severe intestinal Crohn's disease that is still active despite treatment with corticosteroids, unless there is a contraindication or a major intolerance to corticosteroids, where immunosuppressors are contraindicated, are not tolerated or have been ineffective in the past in treating a similar episode after a combined treatment with corticosteroids.

The initial authorization is for a maximum of three 5 mg/kg doses.

Upon the initial request, the physician must indicate the nature of the contraindication or intolerance, as well as the immunosuppressor used. Upon subsequent requests, the physician must provide evidence of a beneficial clinical effect, in which case the request will be authorized for a period of 12 months.

- ◆ for treatment of children suffering from moderate or severe intestinal Crohn's disease that is still active despite treatment with corticosteroids and immunosuppressors, unless there is a contraindication or a major intolerance to corticosteroids. An immunosuppressor must have been tried for at least eight weeks.

The initial authorization is for a maximum of three 5 mg/kg doses.

Upon the initial request, the physician must indicate the immunosuppressor used and the duration of treatment. Upon subsequent requests, the physician must provide evidence of a beneficial clinical effect, in which case the request will be authorized for a period of 12 months.

- ◆ for treatment of children suffering from moderate or severe intestinal Crohn's disease that is still active despite treatment with corticosteroids, unless there is a contraindication or a major intolerance to corticosteroids, where immunosuppressors are contraindicated, are not tolerated or have been ineffective in the past in treating a similar episode after a combined treatment with corticosteroids.

The initial authorization is for a maximum of three 5 mg/kg doses.

Upon the initial request, the physician must indicate the nature of the contraindication or intolerance, as well as the immunosuppressor used. Upon subsequent requests, the physician must provide evidence of a beneficial clinical effect, in which case the request will be authorized for a period of 12 months.

- ◆ for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a period of 12 months.

Authorizations for infliximab are given for three doses of 3 mg/kg, with the possibility of increasing the dose to 5 mg/kg after three doses or in the 14th week.

- ◆ for treatment of persons suffering from moderate or severe ankylosing spondylitis whose BASDAI score is  $\geq 4$  on a scale of 0 to 10 and in whom the sequential use of two non-steroidal anti-inflammatories at the optimal dose for a period of three months each did not adequately control the disease, unless there is a contraindication:
  - Upon the initial request, the physician must provide the following information:
    - the BASDAI score;
    - the degree of functional injury according to the BASFI (scale of 0 to 10).

The initial request will be authorized for a maximum of five months.

- When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:
  - a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;
  - or
  - a decrease of 1.5 points or 43% on the BASFI scale;
  - or
  - a return to work.

Requests for continuation of treatment will be authorized for maximum periods of 12 months.

Authorizations for infliximab are given for a maximum of 5 mg/kg in weeks 0, 2 and 6 and then every six to eight weeks.

- ◆ for treatment of moderate or severe psoriatic arthritis of the rheumatoid type:

- where a treatment with an anti-TNF $\alpha$  appearing in this appendix for treatment of that disease did not make it possible to optimally control the disease or was not tolerated. The anti-TNF $\alpha$  must have been used in respect of the indications for which it is recognized in this appendix for that pathology.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

For psoriatic arthritis of the rheumatoid type, authorizations for infliximab are given for a maximum of 5 mg/kg in weeks 0, 2 and 6 and then every six to eight weeks.

- ◆ for treatment of moderate or severe psoriatic arthritis, of a type other than rheumatoid:

- where a treatment with an anti-TNF $\alpha$  appearing in this appendix for treatment of that disease did not make it possible to optimally control the disease or was not tolerated. The anti-TNF $\alpha$  must have been used in respect of the indications for which it is recognized in this appendix for that pathology.

The initial request is authorized for a maximum of 5 months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for infliximab are given for a maximum of 5 mg/kg in weeks 0, 2 and 6 and then every six to eight weeks.

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis:

- in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or in the presence of large plaques on the face, palms or soles or in the genital area;
- and
- in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;
- and
- where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;
- and

- where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of serious intolerance or a serious contraindication, these two agents must be:
  - methotrexate at a dose of 15 mg or more per week;
  - or
  - cyclosporine at a dose of 3 mg/kg or more per day;
  - or
  - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base values;
- or
- a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pre-treatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for infliximab are given for a maximum of 5 mg/kg in weeks 0, 2 and 6 and then every eight weeks.

- ◆ for treatment of adults suffering from moderate to severe ulcerative colitis that is still active despite treatment with corticosteroids and immunosuppressors, unless there is a serious intolerance or a contraindication.
  - in the presence of a Mayo score of 6 to 12 points;
  - and
  - in the presence of a Mayo endoscopic subscore of at least 2 points.

The initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease in the Mayo score of at least 3 points and at least 30 %, or a decrease in the partial Mayo score of at least 2 points;
- and
- a Mayo rectal bleeding subscore of 0 or 1 point, or a decrease in this subscore of at least 1 point.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

#### INOTERSEN:

- ◆ for treatment of polyneuropathy in adults suffering from hereditary transthyretin-mediated amyloidosis (hATTR).

Upon initiation of treatment, the person:

- must have received genetic confirmation of hATTR;
- and
- must have a Neuropathy Impairment Score (NIS) of 5 to 130 points;
- and

- must have an ambulatory condition corresponding to stage 1 or 2 on the Functional Ambulation Performance (FAP) scale or a stage 1, 2, 3a or 3b on the polyneuropathy disability (PND) scale;  
and
- must not have cardiomyopathy that corresponds to class III or IV of the New York Heart Association (NYHA) Functional Classification.

Authorizations are given for a maximum dose of 284 mg of inotersen by injection once every week.

The maximum duration of each authorization is 6 months.

When requesting continuation of treatment, the physician must confirm that the patient has not reached stage 3 on the FAP scale or stage 4 on the PND scale. Renewal will not be authorized in presence of a stage 3 FAP or stage 4 PND disease.

#### INSULIN ASPART / INSULIN ASPART PROTAMINE:

- ◆ for treatment of diabetes, where a trial of a premixture of 30/70 insuline did not adequately control the glycemic profile without causing episodes of hypoglycemia.

#### INSULIN LISPRO / INSULIN LISPRO PROTAMINE:

- ◆ for treatment of diabetes, where a trial of a premixture of 30/70 insulin did not adequately control the glycemic profile without causing episodes of hypoglycemia.

#### INTERFERON BETA-1A, I.M. Inj. Sol.:

- ◆ for treatment of persons who have had a documented first acute clinical episode of demyelination.

At the beginning of treatment, the physician must provide the results of an MRI showing:

- the presence of at least one non-symptomatic hyperintense T2 lesion affecting at least two of the following four regions: periventricular, juxtacortical, infratentorial, or spinal cord;  
and
- the diameter of these lesions being 3 mm or more.

The maximum duration of the initial authorization is one year. When submitting subsequent requests, the physician must provide evidence of a beneficial effect defined by the absence of a new clinical episode.

Authorizations are given for 30 mcg once per week.

Interferon beta-1a (I.M. Inj. Sol.) remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 2 June 2014, insofar as the physician provides proof of a beneficial effect defined by the absence of a new clinical episode.

- ◆ for treatment of persons suffering from remitting multiple sclerosis who have had one relapse in the last year and whose EDSS score is less than 7.

Authorization of the initial request is granted for a maximum of one year. The same applies to requests for continuation of treatment. In these latter cases, however, the physician must provide proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

Interferon beta-1a (I.M. Inj. Sol.) remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 2 June 2014, insofar as the physician provides proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

- ◆ for treatment of persons suffering from secondary progressive multiple sclerosis who have had clinical episodes of the disease and whose EDSS score is less than 7.

At the beginning of treatment and with each subsequent request, the physician must provide the following information: number of attacks per year and EDSS score.

The maximum duration of the initial authorization is 12 months. When submitting subsequent requests, the physician must provide evidence of a beneficial effect (absence of deterioration).

Authorizations are given for 30 mcg once per week.

#### INTERFERON BETA-1A, S.C. Inj. Sol. and S.C. Inj. Sol. (syr):

- ◆ Persons having experienced a documented first acute clinical episode of demyelination are eligible for continuation of payment of interferon beta-1a (Rebif™) until their condition changes to multiple sclerosis, insofar as its cost was already covered, under the basic prescription drug insurance plan, in the 365 days before 3 June 2013.
- ◆ for treatment of persons suffering from relapsing multiple sclerosis who have had one relapse in the last year and whose EDSS score is less than 7.

Authorization of the initial request is granted for a maximum of one year. The same duration applies to requests for continuation of treatment. In these latter cases, however, the physician must provide proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

Interferon beta-1a (S.C. Inj. Sol. and S.C. Inj. Sol. (syr)) remain covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 2 June 2014, insofar as the physician provides proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

- ◆ for treatment of persons suffering from secondary progressive multiple sclerosis, whether or not they have had clinical episodes, and whose EDSS score is less than 7.

At the beginning of treatment and with each subsequent request, the physician must provide the following information: number of attacks per year, where applicable, and EDSS scale result.

The maximum duration of the initial authorization is 12 months. When submitting subsequent requests, the physician must provide evidence of a beneficial effect (absence of deterioration).

Authorizations are given for 22 mcg three times per week.

#### INTERFERON BETA-1B:

- ◆ for treatment of persons who have had a documented first acute clinical relapse of demyelination.

At the beginning of treatment, the physician must provide the results of an MRI showing:

- the presence of at least one non-symptomatic hyperintense T2 lesion affecting at least two of the following four regions: periventricular, juxtacortical, infratentorial, or spinal cord;
- and
- the diameter of these lesions being 3 mm or more.

The maximum duration of the initial authorization is one year. When submitting subsequent requests, the physician must provide evidence of a beneficial effect defined by the absence of a new clinical episode.

Authorizations will be given for a dose of 8 MIU every two days.

Interferon beta-1b remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 2 June 2014, insofar as the physician provides proof of a beneficial clinical effect defined by the absence of a new clinical episode.

- ◆ for treatment of persons suffering from relapsing multiple sclerosis who have had one relapse in the last year and whose EDSS score is less than 7.

Authorization of the initial request is granted for a maximum of one year. The same duration applies to requests for continuation of treatment. In these latter cases, however, the physician must provide proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

Interferon beta-1b remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 2 June 2014, insofar as the physician provides proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

- ◆ for treatment of persons suffering from secondary progressive multiple sclerosis, whether or not they have had clinical episodes, and whose EDSS score is less than 7.

At the beginning of treatment and with each subsequent request, the physician must provide the following information: number of attacks per year, where applicable, and EDSS score.

The maximum duration of the initial authorization is 12 months. When submitting subsequent requests, the physician must provide evidence of a beneficial effect (absence of deterioration).

★ ISAVUCONAZOLE:

- ◆ for treatment of invasive aspergillosis.
- ◆ for treatment of invasive mucormycosis.

IVABRADINE HYDROCHLORIDE:

- ◆ for treatment of persons suffering from New York Heart Association (NYHA) class II or III heart failure:
  - who have left ventricular systolic dysfunction with ejection fraction  $\leq 35\%$ ;
  - and
  - who are in sinus rhythm and have a heart rate at rest of 77 beats per minute or more;
  - and
  - who have been hospitalized, have had a consultation at an emergency department or at a heart **failure** clinic, due to an aggravation of their heart failure in the last 12 months;
  - and
  - who have been receiving for at least four weeks a treatment with an angiotensin converting enzyme inhibitor (ACEI) or an angiotensin II receptor antagonist (ARA), in combination with a beta blocker and a mineralocorticoid receptor antagonist, unless there is a contraindication or an intolerance.

IXEKIZUMAB:

- ◆ for persons suffering from a severe form of chronic plaque psoriasis:
  - in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or of large plaques on the face, palms or soles or in the genital area;
  - and
  - in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;
  - and

- where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;

and

- where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of serious intolerance or a contraindication, these two agents must be:
  - methotrexate at a dose of 15 mg or more per week;
  - or
  - cyclosporine at a dose of 3 mg/kg or more per day;
  - or
  - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base values;
- or
- a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pre-treatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for Ixekizumab are given for 160 mg on week 0, for 80 mg on weeks 2, 4, 6, 8, 10 and 12, then 80 mg every four weeks.

◆ for the treatment of moderate or severe psoriatic arthritis of rheumatoid type:

- upon initiation of treatment, the person must have eight or more joints with active synovitis and one of the following four elements must be present:
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week;
  - or
  - sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;

- a decrease of 0.2 in the HAQ score;
- a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for ixékizumab are given for a dose of 160 mg on week 0, followed by 80 mg every 4 weeks.

- ♦ for the treatment of moderate or severe psoriatic arthritis of a type other than rheumatoid:
  - upon initiation of treatment, the person must have at least 3 joints with active synovitis and a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - and
  - the disease must still be active despite treatment with two disease modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a contraindication, one of the two drugs must be:
    - methotrexate at a dose of 20 mg or more per week;
    - or
    - sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.2 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for ixékizumab are given for a dose of 160 mg on week 0, followed by 80 mg every 4 weeks.

#### KETOROLAC TROMETHAMINE:

- ♦ for treatment of ocular inflammation in persons for whom ophthalmic corticosteroids are not indicated.

#### LACOSAMIDE:

- ♦ for adjuvant treatment of persons suffering from refractory partial epilepsy, that is, who have not responded adequately to at least two antiepileptic drugs.

#### LACTULOSE:

- ♦ for prevention and treatment of hepatic encephalopathy.
- ♦ for treatment of constipation related to a medical condition.

#### LANTHANUM CARBONATE HYDRATE:

- ♦ as a phosphate binder in persons suffering from severe renal failure, where a calcium salt is contraindicated, is not tolerated, or does not make it possible to optimally control the hyperphosphatemia.

It must be noted that lanthanum hydrate will not be authorized concomitantly with sevelamer or sucroferic oxyhydroxide.

#### LAPATINIB:

- ◆ in association with an aromatase inhibitor for first-line treatment in menopausal women suffering from a hormone receptor positive metastatic breast cancer with HER-2 overexpression:
  - who are unable to receive trastuzumab due to a lower left ventricular ejection fraction of less than or equal to 55% or due to serious intolerance.
- and
- whose ECOG performance status is  $\leq 2$ ;

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

- ◆ for treatment of metastatic breast cancer where the tumour over-expresses the HER2 receptor, in association with capecitabine, in persons whose breast cancer has progressed after administering a taxane and an anthracycline, unless one of those drugs is contraindicated.

In addition, the disease must be progressing despite treatment with trastuzumab administered at the metastatic stage, unless there is a contraindication. The ECOG performance status must be 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

Lapatinib remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 3 June 2013, insofar as the physician provides evidence of a beneficial clinical effect by the absence of disease progression.

#### LEDIPASVIR / SOFOSBUVIR:

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C genotype 1 without decompensated cirrhosis, who have never received an anti-SCV treatment.

Authorization is granted for a maximum period of eight weeks for persons without compensated cirrhosis and whose viral load (HCV-RNA) is less than 6 million UI/ml before treatment. Authorization is granted for a maximum period of 12 weeks for other persons.

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C genotype 1 without cirrhosis who have experienced therapeutic failure with an association of ribavirin / pegylated interferon alfa administered alone or combined with a protease inhibitor.

Authorization is granted for a maximum period of 12 weeks.

- ◆ in association with ribavirin, for treatment of chronic hepatitis C genotype 1 in persons:
  - with compensated cirrhosis and who have experienced therapeutic failure with an association of ribavirin / pegylated interferon alfa administered alone or combined with a protease inhibitor;
- or
- with decompensated cirrhosis;
- or
- who are waiting for an organ transplant or who have received a transplant.

Authorization is granted for a maximum period of 12 weeks.

- ◆ as monotherapy, for treatment of chronic hepatitis C genotype 1 in persons:
  - with compensated cirrhosis and a contraindication or a serious intolerance to ribavirin and who have experienced therapeutic failure with an association of ribavirin / pegylated interferon alfa administered alone or combined with a protease inhibitor;
  - or
  - with decompensated cirrhosis and a contraindication or a serious intolerance to ribavirin;
  - or
  - who are waiting for an organ transplant or who have received a transplant and who have a contraindication or a serious intolerance to ribavirin.

Authorization is granted for a maximum period of 24 weeks.

#### LENALIDOMIDE:

- ◆ for treatment of anemia caused by a myelodysplastic syndrome (MDS) of low-risk or intermediate-1-risk, according to the IPSS (International Prognostic Scoring System for MDS), accompanied by a deletion 5q cytogenetic abnormality.

Anemia in this case is characterized by a hemoglobin rate of less than 90 g/L or by transfusion dependence.

For each request, the physician must provide a recent hemoglobin rate result for the person concerned and a history of the person's blood transfusions over the past six months.

When requesting continuation of treatment:

- in the case of a person with transfusion dependence before the beginning of the treatment, the physician must provide evidence of a beneficial effect defined by:
  - a reduction of at least 50% in blood transfusions, in comparison to the beginning of the treatment.
- in the case of a person who did not have a blood transfusion during the six months preceding the beginning of the treatment, the physician must provide evidence of a beneficial effect defined by:
  - an increase of at least 15 g/L in the hemoglobin rate, in comparison to the rate observed before the beginning of the treatment;
 and
  - the maintenance of transfusion independence.

The duration of each authorization is six months.

- ◆ in association with dexamethasone, for first-line treatment of symptomatic multiple myeloma in persons:
  - who are not candidates for a stem cell transplant;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of the initial authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression according to the International Myeloma Working Group criteria.

The maximum duration for subsequent authorizations is six months.

- ◆ in association with dexamethasone, for second-line or subsequent treatment of refractory or recurrent multiple myeloma in persons whose ECOG performance status is  $\leq 2$ .

The maximum duration of the initial authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression according to the International Myeloma Working Group criteria.

The maximum duration for subsequent authorizations is six months.

It must be noted that lenalidomide is not authorized in association with bortezomib.

- ◆ in association with dexamethasone, for continuation of treatment of recurrent multiple myeloma in persons:
  - whose disease has not progressed during or following a 18-cycle treatment combining carfilzomib, lenalidomide and dexamethasone;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression according to the International Myeloma Working Group criteria.

LENVATINIB, 10 mg, 14 mg, 20 mg, 24 mg :

- ◆ as monotherapy, for treatment of advanced or metastatic locally differentiated thyroid cancer, refractory to radioactive iodine, in persons:
  - whose cancer progressed in the last 12 months before the start of lenvatinib;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging or based on a physical examination.

LENVATINIB, 4 mg, 8 mg, 12 mg:

- ◆ as monotherapy, for first-line treatment of unresectable hepatocellular carcinoma, in persons:
  - whose disease corresponds to BCLC stage B or C (*Barcelona Clinic Liver Cancer*);
  - and
  - whose liver function is preserved, corresponding to Child-Pugh A;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is 4 months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression, confirmed by imaging.

It must be noted that lenvatinib is not authorized after a failure of sorafenib if it was administered to treat hepatocellular carcinoma.

LETERMOVIR:

- ◆ for prophylactic treatment of a cytomegalovirus (CMV) infection in persons CMV-seropositive and who have undergone allogeneic hematopoietic stem cell transplant.

The treatment must have begun in the 28 days following the transplant and have ceased 100 days afterward at the latest.

LEVOFLOXACINE, Sol. Inh.:

- ◆ for treatment of persons suffering from cystic fibrosis who are chronically infected with *Pseudomonas aeruginosa*, where the solution of aztreonam for inhalation is ineffective, not tolerated or contraindicated.

LINAGLIPTIN:

- ◆ for treatment of type-2 diabetic persons:
  - as monotherapy when metformin and a sulfonylurea are contraindicated or poorly tolerated;
  - or
  - in association with metformin where a sulfonylurea is contraindicated, not tolerated or ineffective.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

LINAGLIPTIN / METFORMIN hydrochloride:

- ◆ for treatment of type-2 diabetic persons:
  - where a sulfonylurea is contraindicated, not tolerated or ineffective;
  - and
  - where the optimal maximum dose of metformin has been stable for at least one month.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

★ LINEZOLID, I.V. Perf. Sol.:

- ◆ for treatment of proven or presumed methicillin-resistant staphylococci infections, where vancomycin is ineffective, contraindicated or not tolerated and where linezolid cannot be used orally.
- ◆ for treatment of vancomycin-resistant proven enterococci infections, where linezolid cannot be used orally.

★ LINEZOLID, Tab.:

- ◆ for treatment of proven or presumed methicillin-resistant staphylococci infections, where vancomycin is ineffective, contraindicated or not tolerated.
- ◆ for treatment of vancomycin-resistant proven enterococci infections.
- ◆ for continuation of treatment of proven or presumed methicillin-resistant staphylococci infections initiated intravenously in a hospital.

LIRAGLUTIDE:

- ◆ in association with metformin, for treatment of type-2 diabetic persons whose glycemic control is inadequate and whose body mass index (BMI) is more than 30 kg/m<sup>2</sup> when a DPP-4 inhibitor is contraindicated, not tolerated or ineffective.

The maximum duration of each authorization is 12 months.

When submitting the first request for continuation of treatment, the physician must provide proof of a beneficial effect defined by a reduction in the glycated hemoglobin (HbA<sub>1c</sub>) of at least 0.5% or by the attainment of a target value of 7% or less.

Authorization is given for a maximum daily dose of 1.8 mg.

Ineffectiveness means the non-attainment of the HbA<sub>1c</sub> value adapted to the patient.

#### LISDEXAMFETAMINE DIMESYLATE:

- ◆ for treatment of persons with attention deficit disorder, with or without hyperactivity.

#### LOMITAPIDE MESYLATE:

- ◆ for treatment of adults suffering from homozygous familial hypercholesterolemia (HoFH) confirmed by genotyping or by phenotyping:
  - where two hypolipemians of different classes at optimal doses are not tolerated, are contraindicated or are ineffective;  
and
  - in association with a low-density lipoprotein (LDL) apheresis treatment, unless access to an apheresis centre is especially difficult.

Phenotyping is defined by the following three factors:

- a concentration in the low-density lipoprotein cholesterol (LDL-C) of more than 13 mmol/l before the beginning of a treatment;
- the presence of xanthomas before age 10;
- the confirmed presence in both parents of heterozygous familial hypercholesterolemia.

The initial request is granted for a maximum period of four months.

Upon subsequent requests, the physician must provide information making it possible to establish the beneficial effects of the treatment, that is, a decrease of at least 20% in the LDL-C, compared to the basic levels.

Authorizations for lomitapide are given for a maximum daily dose of 60 mg.

#### LURASIDONE HYDROCHLORIDE:

- ◆ for treatment of schizophrenia.
- ◆ for management of depressive episodes associated with bipolar I disorder.

#### MACITENTAN:

- ◆ for treatment of pulmonary arterial hypertension of WHO functional class III that is either idiopathic or associated with connectivitis and that is symptomatic despite the optimal conventional treatment.

Persons must be evaluated and followed up on by physicians working at designated centres specializing in the treatment of pulmonary arterial hypertension.

#### MAGNESIUM HYDROXIDE:

- ◆ for treatment of constipation related to a medical condition.

#### MAGNESIUM HYDROXYDE / ALUMINUM HYDROXYDE:

- ◆ as a phosphate binder in persons suffering from severe renal failure.

#### MARAVIROC:

- ◆ for treatment, in association with other antiretrovirals, of HIV-infected persons for whom the tropism test carried out during the past three months showed the presence of a CCR5 tropic virus exclusively, and:
  - who have tried, since the beginning of their antiretroviral therapy, at least one therapy that included delavirdine, efavirenz or nevirapine, unless there is a primary resistance to one of those drugs, and that resulted:
    - in a documented virological failure, after at least three months of treatment with an association of several antiretroviral agents;
- or

- in serious intolerance to one of those agents, to the point of calling into question the continuation of the antiretroviral treatment;
- and
- who have tried, since the beginning of their antiretroviral therapy, at least one therapy that included a protease inhibitor and that resulted:
    - in a documented virological failure, after at least three months of treatment with an association of several antiretroviral agents;
- or
- in serious intolerance to at least three protease inhibitors, to the point of calling into question the continuation of the antiretroviral treatment.

Where a therapy including a non-nucleoside reverse transcriptase inhibitor cannot be used because of a primary resistance to delavirdine, efavirenz or nevirapine, a trial of at least two therapies, each including a protease inhibitor, is necessary and must have resulted in the same conditions as those listed above.

- ◆ for first-line treatment, in association with other antiretrovirals, of HIV-infected persons for whom the tropism test carried out during the past three months showed the presence of a CCR5 tropic virus exclusively and for whom a laboratory test showed a resistance to at least one nucleoside reverse transcriptase inhibitor, one non-nucleoside reverse transcriptase inhibitor and one protease inhibitor, and:
    - whose current viral load and another dating back at least one month are greater than or equal to 500 copies/mL;
- and
- whose current CD4 lymphocyte count and another dating back at least one month are less than or equal to 350/ $\mu$ L;
- and
- for whom the use of maraviroc is necessary for constituting an effective therapeutic regimen.

#### MEMANTINE HYDROCHLORIDE:

- ◆ as monotherapy for person suffering from Alzheimer's disease at the moderate or severe stage who are living at home, specifically, who do not live in a residential and long-term care centre that is either a public institution or a private institution under agreement.

Upon the initial request, the following elements must be present:

- an MMSE score of 3 to 14;
- medical confirmation of the degree to which the person is affected (intact domain, mildly, moderately or severely affected) in the following five domains:
  - intellectual function, including memory;
  - mood;
  - behaviour;
  - autonomy in activities of daily living (ADL) and in instrumental activities of daily living (IADL);
  - social interaction, including the ability to carry on a conversation.

The duration of an initial authorization for treatment with memantine is six months from the beginning of treatment.

However, where memantine is used following treatment with a cholinesterase inhibitor, the concomitant use of both medications is authorized for one month.

Upon subsequent requests, the physician must provide evidence of a beneficial effect confirmed by stabilization or improvement of symptoms in at least three of the following domains:

- intellectual function, including memory;
- mood;
- behaviour;
- autonomy in activities of daily living (ADL) and in instrumental activities of daily living (IADL);
- social interaction, including the ability to carry on a conversation.

The maximum duration of the authorization is six months.

**MEPOLIZUMAB:**

- ◆ for treatment of severe eosinophilic asthma in adults presenting or having presented:
  - an eosinophil blood level of at least 150 cells/microlitre ( $0.15 \times 10^9/l$ ) at the time the treatment with an agent targeting interleukin-5 (IL-5) is initiated or of at least 300 cells/microlitre ( $0.3 \times 10^9/l$ ) in the 12 months preceding the treatment with an agent targeting IL-5;
  - and
  - symptoms that are not controlled despite optimal treatment. Optimal treatment is understood as the use of an inhaled corticosteroid at a dose equivalent to 1 000 mcg of propionate fluticasone, a long-acting  $\beta_2$  agonist, and the trial of a leukotriene receptor antagonist, an inhaled long-acting antimuscarinic or theophyllin;
  - and
  - at least two exacerbations in the last year requiring the use of a systemic corticosteroid or an increase in the dose of this drug in the case of patients receiving it on an ongoing basis.

The physician must provide the number of exacerbations in the last year, as previously defined, along with the results of one of the following questionnaires:

- Asthma Control Questionnaire (ACQ);
- or
- Asthma Control Test (ACT);
- or
- St George's Respiratory Questionnaire (SGRQ);
- or
- Asthma Quality of Life Questionnaire (AQLQ).

Upon the initial request, the physician must have previously ascertained the inhalation technique, compliance with the pharmacological treatment and the implementation of strategies aimed at reducing exposure to aeroallergens for which the person had obtained a positive skin test or positive in vitro reactivity test.

The initial authorization is for a maximum duration of eight months.

Upon the second request, the physician must provide information demonstrating the beneficial effects of the treatment, namely:

- a decrease of 0.5 point or more on the ACQ questionnaire;
- or
- an increase of 3 points or more on the ACT questionnaire;
- or
- a decrease of 4 points or more on the SGRQ questionnaire;
- or
- an increase of 0.5 point or more on the AQLQ questionnaire.

The second request will be authorized for a maximum duration of 12 months.

Upon subsequent requests, the physician must provide proof of the continuation of the beneficial effects on one of the aforementioned questionnaires or proof of a decrease in the number of annual exacerbations as previously defined.

Requests for continuation of treatment are authorized for a maximum duration of 12 months.

Authorizations are given for a maximum dose of 100 mg every month.

- ◆ for treatment of severe asthma requiring the use of an oral corticosteroid on an ongoing basis for at least three months, in adults with an eosinophil blood level of at least 150 cells/microlitre ( $0.15 \times 10^9/l$ ) at the time the treatment with an agent targeting interleukin-5 (IL-5) is initiated or of at least 300 cells/microlitre ( $0.3 \times 10^9/l$ ) in the 12 months preceding the treatment with an agent targeting IL-5.

The initial authorization is for a maximum duration of eight months.

Upon the second request, the physician must confirm a decrease in the corticosteroid maintenance dose equivalent to 10 mg or more of prednisone or of at least 50% compared to the one before the start of the mepolizumab treatment.

The second request will be authorized for a maximum duration of 12 months.

Upon subsequent requests, the physician must confirm the continuation of the decrease in the maintenance dose of the oral corticosteroid.

Requests for continuation of treatment are authorized for a maximum duration of 12 months.

Authorizations are given for a maximum dose of 100 mg every month.

METHYLPHENIDATE HYDROCHLORIDE, L.A. Caps. or L.A. Tab. (12 h):

- ◆ for treatment of persons with attention deficit disorder, with or without hyperactivity.

METRONIDAZOLE, Vag. Gel:

- ◆ for treatment of bacterial vaginosis during the second and third trimesters of pregnancy.
- ◆ for treatment of bacterial vaginosis where metronidazole administered orally is not tolerated.

★ MICA FUNGIN SODIUM:

- ◆ for prevention of fungal infections in persons who will undergo a hematopoietic stem cell transplant.
- ◆ for treatment of invasive candidosis in persons for whom treatment with fluconazole has failed or is contraindicated, or who are intolerant to such a treatment.

MICRONIZED PROGESTERONE, Caps.:

- ◆ for persons unable to take medroxyprogesterone acetate because of major intolerance.

MIGALASTAT:

- ◆ for treatment of adults with a genetically confirmed diagnosis of Fabry disease carrying a mutation in the alpha galactosidase A coding gene that is recognized amenable to migalastat.

Upon initiation of treatment, the person must:

- show symptoms of the disease, including at least renal, cardiac or neurological impairment;
- and
- not be receiving a concomitant treatment with an enzyme replacement therapy.

When requesting continuation of treatment, the physician must provide information demonstrating the beneficial effects on the manifestations that justified the initiation of the treatment or the absence of progression of the disease.

The maximum duration of each authorization is 24 months.

Authorizations are given for a maximum dose of 123 mg every 2 days.

MINRAL OIL:

- ◆ for treatment of constipation related to a medical condition.

MIRABEGRON:

- ◆ for treatment of vesical hyperactivity in persons for whom at least one of the antimuscarinic agents indicated in the regular section of the List is poorly tolerated, contraindicated or ineffective.

MODAFINIL:

- ◆ for symptomatic treatment of diurnal hypersomnolence accompanying narcolepsy or idiopathic or post-traumatic hypersomnia, where dexamphetamine sulfate or methylphenidate is ineffective, contraindicated or not tolerated.
- ◆ for adjunctive treatment of diurnal hypersomnolence secondary to sleep apnea or hypopnea syndrome that persists despite the use of a nasal continuous positive airway pressure device.

★ MOXIFLOXACIN HYDROCHLORIDE, I.V. Perf. Sol.:

- ◆ for treatment of infections, where oral moxifloxacin cannot be used.

MULTIVITAMINS:

- ◆ for persons suffering from cystic fibrosis.

NAPROXEN / ESOMEPRAZOLE:

- ◆ for treatment of medical conditions requiring chronic use of a non-steroidal anti-inflammatory drug in persons with at least one of the following gastrointestinal complication risk factors:
  - person age 65 or over;
  - history of uncomplicated ulcer of the upper digestive tract;
  - comorbidity, i.e. a serious medical condition predisposing a person to an exacerbation of his/her clinical condition following the taking of a non-steroidal anti-inflammatory drug;
  - concomitant drugs predisposing a person to an exacerbated risk of gastrointestinal complications;
  - use of more than one non-steroidal anti-inflammatory drug.

NATALIZUMAB:

- ◆ for monotherapy treatment of persons suffering from relapsing multiple sclerosis whose EDSS scale score is ≤ 5 before the treatment and in whom there has been a rapid evolution of the disease, defined as:
  - the occurrence of two or more incapacitating clinical episodes with partial recovery during the past year;
  - or
  - the occurrence of two or more incapacitating clinical episodes with full recovery during the past year and:
    - the presence of at least one gadolinium-enhanced lesion on magnetic resonance imaging (MRI);
    - or
    - an increase of two or more T2 hyperintense lesions in comparison with a previous MRI.

The maximum duration of the authorizations is one year. For continuation of treatment, the physician must provide evidence of a beneficial effect in comparison with the evaluation carried out before the treatment began, specifically:

- a reduction in the annual frequency of incapacitating episodes during the past year;
- and
- a stabilization of the EDSS scale score or an increase of less than 2 points without the score exceeding 5.

An incapacitating episode means an episode during which a neurological examination confirms optical neuritis, posterior fossa syndrome (cerebral trunk and cerebellum) or symptoms revealing that the spinal cord is affected (myelitis).

★ NETUPITANT / PALONOSETRON CHLORHYDRATE:

- ◆ In association with dexamethasone, for the prevention of nausea and vomiting, on the first day of a highly emetic chemotherapy treatment.

Authorizations are given for one dose per cycle of chemotherapy.

NILOTINIB:

- ◆ for first-line treatment of chronic myeloid leukemia in the chronic phase.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a hematologic response.

- ◆ for treatment of chronic myeloid leukemia (CML) in the chronic or accelerated phase in adults:

- for whom imatinib has failed or produced a sub-optimal response;  
or
- who have serious intolerance to imatinib.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a hematologic response.

NINTEDANIB ESILATE:

- ◆ for treatment of idiopathic pulmonary fibrosis, in persons:

- whose forced vital capacity (FVC) is 50% or more of the predicted value;  
and
- whose carbon monoxide diffusing capacity is 30% to 79% of the predicted value corrected for hemoglobin;  
and
- whose ratio of forced expiratory volume in one second (FEV1) to the FVC (FEV1/FVC) is 0.70 or more.

The initial authorization and requests for continuation of treatment will be authorized for a maximum duration of 12 months.

Upon subsequent requests, the physician must provide proof of a beneficial clinical effect defined by the absence of deterioration in the patient's condition. Deterioration is understood as a decline in FVC, expressed in a percentage of the predicted value, of 10% or more in absolute value, in the last 12 months.

Where FVC, expressed in a percentage of the predicted value, declines by 10% or more in absolute value over a 12-month period, treatment must cease.

NITRAZEPAM:

- ◆ to control seizure disorders.

|                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Nevertheless, nitrazepam tablets remain covered under the basic prescription drug insurance plan until 31 May 2016 for insured persons having used this drug in the 90 days preceding 1 June 2015. |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

NUTRITIONAL FORMULA – CASEIN-BASED (INFANTS AND CHILDREN):

- ◆ for infants and children who are allergic to complete milk proteins.

In such cases, the maximum duration of the initial authorization is up to the age of 12 months. The results of an allergen skin test or of re-exposure to milk must be provided in order for utilization to continue.

- ◆ for infants and children suffering from galactosemia and requiring a lactose-free diet.
- ◆ for infants and children suffering from persistent diarrhea or other severe gastrointestinal problems. The results of re-exposure to milk must be provided in order for utilization to continue.

#### NUTRITIONAL FORMULA – FAT EMULSION (INFANTS AND CHILDREN):

- ◆ to increase the caloric content of the diet or of other nutritional formulas in the presence of cardiac or metabolic disorders in children under age 4, and for whom the polymerized glucose nutritional formulas are not sufficient or not tolerated.

#### NUTRITIONAL FORMULA – FOLLOW-UP PREPARATION FOR PREMATURE INFANTS:

- ◆ for infants whose birth weight is less than or equal to 1 800 g or who are born after 34 weeks of pregnancy or less.

In this case, the maximum duration of the authorization will be until one year corrected age, in other words, until one year after the expected date of birth.

#### NUTRITIONAL FORMULA – FRACTIONATED COCONUT OIL:

- ◆ for persons unable to effectively digest or absorb long-chain fatty foods.

#### NUTRITIONAL FORMULA – KETOGENIC :

- ◆ for treatment of children under the age of 18 suffering from refractory epilepsy despite the trial over an adequate period of at least two appropriate and well tolerated anticonvulsive drugs, used either as monotherapy or combined.

Upon the initial request, the physician must provide the number of seizures per week. This initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of more than 50% in the frequency of seizures since the beginning of treatment;
- or
- a decrease in the severity of seizures.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

#### NUTRITIONAL FORMULA – MONOMERIC:

- ◆ for enteral feeding.
- ◆ for oral feeding of persons requiring monomeric nutritional formulas or semi-elemental nutritional formulas as their source of nutrition in the presence of severe maldigestion or malabsorption disorders and for whom polymeric formulas are not recommended or not tolerated.
- ◆ for children suffering from malnutrition, malabsorption or growth failure related to a medical condition.
- ◆ for persons suffering from cystic fibrosis.

#### NUTRITIONAL FORMULA – MONOMERIC WITH IRON (INFANTS OR CHILDREN):

- ◆ for infants or children who are allergic to complete milk proteins, soy proteins or multiple dietary proteins and in whom the utilization of a casein hydrolysate formula has not succeeded in eliminating the symptoms.
- ◆ for infants or children who are suffering from persistent diarrhea or other severe gastrointestinal problems and in whom the utilization of a casein hydrolysate formula has not succeeded in eliminating the symptoms.

In such cases, the maximum duration of the initial authorization is one year. The results of re-exposure to a casein hydrolysate formula or milk must be provided in order for utilization to continue.

- ◆ for infants or children whose condition requires hospitalization and who have severe gastrointestinal problems of which the confirmed cause is a bovine protein allergy.

In such cases, the maximum duration of the initial authorization is one year. The results of an allergen skin test or of re-exposure to a casein hydrolysate formula or milk must be provided in order for the authorization to continue.

#### NUTRITIONAL FORMULA – POLYMERIC LOW-RESIDUE:

- ◆ for enteral feeding.
- ◆ for total oral feeding of persons requiring nutritional formulas as their source of nutrition in presence of esophageal dysfunction or dysphagia, maldigestion or malabsorption.
- ◆ for children suffering from malnutrition, malabsorption or growth failure related to a medical condition.
- ◆ for persons suffering from cystic fibrosis.

#### NUTRITIONAL FORMULA – POLYMERIC LOW-RESIDUE – SPECIFIC USE:

- ◆ for total feeding, whether enteral or oral, of children suffering from Crohn's disease.

#### NUTRITIONAL FORMULA – POLYMERIC WITH RESIDUE:

- ◆ for enteral feeding.
- ◆ for total oral feeding of persons requiring nutritional formulas as their source of nutrition in presence of esophageal dysfunction or dysphagia, maldigestion or malabsorption.
- ◆ for children suffering from malnutrition, malabsorption or growth failure related to a medical condition.
- ◆ for persons suffering from cystic fibrosis.

#### NUTRITIONAL FORMULA – POLYMERIZED GLUCOSE:

- ◆ to increase the caloric content of the diet or of other nutritional formulas.

#### NUTRITIONAL FORMULA – PROTEIN:

- ◆ to increase the protein content of other nutritional formulas.

#### NUTRITIONAL FORMULA – SEMI-ELEMENTAL:

- ◆ for enteral feeding.
- ◆ for oral feeding in persons requiring monomeric nutritional formulas or semi-elemental nutritional formulas as their source of nutrition in the presence of severe maldigestion or malabsorption disorders and for whom polymeric formulas are not recommended or not tolerated.
- ◆ for children suffering from malnutrition, malabsorption or growth failure related to a medical condition.

- ◆ for persons suffering from cystic fibrosis.

#### NUTRITIONAL FORMULA – SEMI ELEMENTAL, VERY HIGH PROTEIN:

- ◆ for enteral feeding of persons requiring semi-elemental nutritional formulas as their source of nutrition in the presence of malabsorption, and whose nutritional needs in proteins have significantly increased.

#### NUTRITIONAL FORMULA – SKIM MILK / COCONUT OIL:

- ◆ for persons unable to effectively digest or absorb long-chain fatty foods.

#### OBETICHOLIC ACID:

- ◆ for treatment of primary biliary cholangitis:
  - in association with ursodiol in adults who do not adequately respond to it after a treatment lasting a minimum of 12 months;
  - or
  - as monotherapy in adults with an intolerance to ursodiol.

Upon the initial request, the person must have one of the following:

- an alkaline phosphatase level of at least 1.67 times the upper limit of normal;
- a total bilirubin level exceeding the upper limit of normal, but under twice this limit.

The initial request is authorized for a maximum of 12 months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically, a reduction in the alkaline phosphatase level or the total bilirubin level compared to the values before the beginning of the treatment with obeticholic acid.

Requests for the continuation of treatment are authorized for a period of 12 months.

#### OCRELIZUMAB:

- ◆ for treatment of persons suffering from primary progressive multiple sclerosis whose EDSS score is from 3.0 to 6.5;

Authorizations, for the initial request and for requests for continuation of treatment, are for a maximum duration of one year. Upon subsequent requests, the physician must provide evidence that the EDSS score remains under 7.

- ◆ for treatment of persons suffering from relapsing multiple sclerosis who have had one relapse in the last year and whose EDSS score is less than 7.

Authorization of the initial request is granted for a maximum of one year. The same duration applies to requests for continuation of treatment. In these latter cases, however, the physician must provide proof of a beneficial clinical effect defined by the absence of deterioration. The EDSS score must remain under 7.

#### OLAPARIB:

- ◆ for maintenance treatment of epithelial ovarian cancer, fallopian tube cancer, or primary peritoneal cancer, with a BRCA1 or BRCA2 mutation, in persons:
  - who have received at least two platinum-salt chemotherapy protocols;
  - and
  - whose disease has progressed more than six months after the end of the next-to-last platinum-salt chemotherapy;
  - and
  - who obtained an objective tumour response with their last platinum-salt chemotherapy;
  - and

- whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

It must be noted that a maintenance treatment with olaparib is not authorized following the failure of a PARP inhibitor if it was administered for the treatment of ovarian cancer, fallopian tube cancer, or primary peritoneal cancer.

- ◆ as monotherapy for maintenance treatment of an advanced form (FIGO III or IV) of high-grade epithelial ovarian cancer, fallopian tube cancer, or primary peritoneal cancer, with a BRCA1 or BRCA2 mutation, in persons:
  - who obtained an objective tumour response with first-line platinum-based chemotherapy; and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

The authorization will not be renewed for persons who exhibited a complete response (absence of clinical and radiological signs of the disease, accompanied by a normal CA-125 level) following 24 months of treatment with olaparib.

#### OLODATEROL HYDROCHLORIDE / TIOTROPIUM MONOHYDRATED BROMIDE:

- ◆ for maintenance treatment of persons suffering from chronic obstructive pulmonary disease (COPD) for whom using a long-acting bronchodilator for at least 3 months has not allowed an adequate control of the symptoms of the disease.

The initial authorization is given for a maximum duration of 6 months. For a subsequent request, the physician will have to provide proof of a beneficial clinical effect.

It must be noted that this association (long-acting  $\beta_2$  agonist and long-acting antimuscarinic) must not be used concomitantly with a long-acting bronchodilator (long-acting  $\beta_2$  agonist or long-acting antimuscarinic) alone or in association with an inhaled corticosteroid.

#### OMALIZUMAB:

- ◆ for treatment of persons suffering from moderate to severe idiopathic chronic urticaria, whose Urticaria Activity Score 7 (UAS7) is equal to or greater than 16, despite the use of antihistamines at optimized doses.

When requesting the continuation of treatment, the physician must provide proof of a complete response lasting less than 12 weeks or of a partial response. A complete response means the attainment of a UAS7 score less than or equal to 6, while a partial response corresponds to a reduction of at least 9.5 points on the UAS7 score compared to the initial score, without attaining a value less than or equal to 6.

Where the patient has a complete response lasting 12 or more weeks, the treatment must be stopped. For a subsequent request, the physician will have to provide information showing a relapse. A relapse is defined as the attainment of a UAS7 score equal to or greater than 16 following a complete response.

Authorizations are given for a maximum of 24 weeks at a maximum dose of 300 mg every four weeks.

#### ONABOTULINUMTOXIN A:

- ◆ for treatment of cervical dystonia, blepharospasm, strabismus and other severe spasticity conditions.
- ◆ for treatment of adults suffering from severe axillary hyperhidrosis causing significant effects on the functional and psychosocial levels, where an aluminum chloride preparation of at least 20% used for one month or more according to the recommendations to maximize its effect and tolerance has proven ineffective.

In the initial request for authorization, the physician must document the above-mentioned effects. Authorization will then be granted for four months for a dose of 100 units of this drug.

Upon subsequent requests, the physician must show evidence of a beneficial effect in the form of a decrease in sudation and an observed improvement on the functional and psychosocial levels.

#### ★ ONDANSETRON:

- ◆ during the first day of a moderately or highly emetic chemotherapy treatment.
- ◆ during a moderately or highly emetic radiotherapy treatment.
- ◆ in children during emetic chemotherapy or radiotherapy.
- ◆ during:
  - a chemotherapy treatment undergone by persons for whom the conventional antiemetic therapy is ineffective, contraindicated or poorly tolerated and who are not receiving aprepitant or fosaprepitant;
  - or
  - a radiotherapy treatment undergone by persons for whom the conventional antiemetic therapy is ineffective, contraindicated or poorly tolerated.

#### OSIMERTINIB:

- ◆ for treatment of unresectable locally advanced or metastatic non-small-cell lung cancer with an EGFR T790M mutation, in persons:
  - whose disease has progressed during or following a treatment with an EGFR tyrosine kinase inhibitor;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

- ◆ for first-line treatment of persons suffering from a locally advanced unresectable or metastatic non-small-cell lung cancer, having an activating mutation of the EGFR tyrosine kinase, and whose ECOG performance status is  $\leq 1$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression, confirmed by imaging.

#### OXCARBAZEPINE:

- ◆ for treatment of epilepsy.

- ◆ for persons for whom carbamazepine is not tolerated or is contraindicated, or for whom treatment with carbamazepine has failed.

OXYBUTYNINE, Patch:

- ◆ for treatment of vesical hyperactivity in persons for whom at least one of the antimuscarinic agents indicated in the regular section of the List is poorly tolerated, contraindicated or ineffective.

OXYBUTYNINE CHLORIDE, L.A. Tab.:

- ◆ for treatment of vesical hyperactivity in persons for whom at least one of the antimuscarinic agents indicated in the regular section of the List is poorly tolerated, contraindicated or ineffective.

OXYCODONE, L.A. Tab.:

- ◆ when two other opiates are not tolerated, contraindicated or ineffective.

Long-acting oxycodone is covered under the basic prescription drug insurance plan for insured persons having used that medication from 1 March 2012 to 15 July 2012.

OXYHYDROXYDE SUCRO FERRIC :

- ◆ as a phosphate binder in persons suffering from severe renal failure where a calcium salt is contraindicated, is not tolerated, or does not make it possible to optimally control the hyperphosphatemia.

It must be noted that taking this medication concomitantly with sevelamer or lanthanum hydrate is not authorized.

PALBOCICLIB:

- ◆ in association with a non-steroidal aromatase inhibitor, for first-line treatment of unresectable locally advanced or metastatic breast cancer, positive for hormone receptors and without HER-2 receptor overexpression, in menopausal women whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

It must be noted that palbociclib is not authorized in cases of resistance to a non-steroidal aromatase inhibitor administered in a neoadjuvant or adjuvant context for breast cancer. Resistance is defined by a progression occurring during or within 12 months after taking of an aromatase inhibitor.

- ◆ in association with fulvestrant, for treatment of advanced or metastatic breast cancer, positive for the hormone receptors but not over-expressing the HER2 receptor, in women with an ECOG performance status of 0 or 1:
  - whose disease has progressed during an adjuvant endocrine treatment or in the 12 months following its discontinuation;
  - or
  - whose metastatic disease has progressed during an endocrine treatment.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression.

It must be noted that palbociclib is not authorized following the failure of a CDK 4/6 inhibitor if it was administered for the treatment of breast cancer.

PARAFFIN / MINERAL OIL:

- ◆ for treatment of keratoconjunctivitis sicca or other severe conditions accompanied by markedly reduced tear production.

PATISIRAN :

- ◆ for treatment of polyneuropathy in adults suffering from hereditary transthyretin-mediated amyloidosis (hATTR).

Upon initiation of treatment, the person:

- must have received genetic confirmation of hATTR;  
and
- must have a Neuropathy Impairment Score (NIS) of 5 to 130 points;  
and
- must have an ambulatory condition corresponding to stage 1 or 2 on the Functional Ambulation Performance (FAP) scale or to stage 1, 2, 3a or 3b on the polyneuropathy disability (PND) scale ;  
and
- must not have cardiomyopathy that corresponds to class III or IV of the New York Heart Association (NYHA) Functional Classification.

Authorizations are given for a maximum dose of 0.3 mg/kg of patisiran once every 3 weeks, up to a maximum dose of 30 mg.

The maximum duration of each authorization is 6 months.

When requesting continuation of treatment, the physician must confirm that the patient has not reached stage 3 on the FAP scale or stage 4 on the PND scale. Renewal will not be authorized in presence of a stage 3 FAP or stage 4 PND disease.

PAZOPANIB HYDROCHLORIDE:

- ◆ for first-line treatment of a metastatic renal adenocarcinoma characterized by the presence of clear cells, in persons whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

★ PEGFILGRASTIM:

- ◆ for treatment of persons undergoing cycles of moderately or highly myelosuppressive chemotherapy ( $\geq 40$  percent risk of febrile neutropenia).
- ◆ for treatment of persons at risk of developing severe neutropenia during chemotherapy.
- ◆ in subsequent cycles of chemotherapy, for treatment of persons having suffered from severe neutropenia (neutrophil count below  $0.5 \times 10^9/l$ ) during the first cycles of chemotherapy and for whom a reduction in the antineoplastic dose is inappropriate.
- ◆ in subsequent cycles of curative chemotherapy, for treatment of persons having suffered from neutropenia (neutrophil count below  $1.5 \times 10^9/l$ ) during the first cycles of chemotherapy and for whom a reduction in the dose or a delay in the chemotherapy administration plan is unacceptable.

PEGINTERFERON ALFA-2A:

- ◆ for treatment of persons suffering from chronic hepatitis C for whom ribavirin is contraindicated:
  - in the presence of hereditary hemolytic anemia (thalassemia and others);  
or

- in the presence of severe renal failure (creatinine clearance less than or equal to 35 mL/min).

The initial request is authorized for a maximum of 20 weeks. The authorization will be renewed if the decrease in the HCV-RNA is greater than or equal to 1.8 log after 12 weeks of treatment. The authorization will then be given for a maximum of 12 weeks. The request will be renewed if the HCV-RNA is negative after 24 weeks of treatment. The total duration of treatment will be 48 weeks.

- ◆ for treatment of persons suffering from chronic hepatitis C for whom ribavirin is not tolerated:
  - in persons who have developed severe anemia while taking ribavirin, despite a decrease in the dosage to 600 mg per day (Hb < 80 g/L or < 100 g/L if co-morbidity of the atherosclerotic heart disease type);
  - or
  - in persons who have developed a severe intolerance to ribavirin: appearance of an allergy, of an incapacitating skin rash or of incapacitating dyspnea with effort.

The initial request is authorized for a maximum of 20 weeks. The authorization will be renewed if the decrease in the HCV-RNA is greater than or equal to 1.8 log after 12 weeks of treatment. The authorization will then be given for a maximum of 12 weeks. The request will be renewed if the HCV-RNA is negative after 24 weeks of treatment. The total duration of treatment will be 48 weeks.

- ◆ for treatment of HBeAg-negative chronic hepatitis B. The request is authorized for a maximum of 48 weeks.

#### PENTOXIFYLLINE:

- ◆ for treatment of persons suffering from serious and chronic peripheral vascular ailments, specifically:
  - in the case of venous insufficiency with cutaneous ulcer (or antecedents);
  - in the case of arterial insufficiency with cutaneous ulcer (or antecedents), gangrene, antecedents of amputation or pain at rest.

#### PERAMPANEL:

- ◆ for adjunctive treatment of persons suffering from refractory partial epilepsy, that is, following the failure of two appropriate and tolerated antiepileptic drugs (used either as monotherapy or in combination).
- ◆ as adjunctive treatment of persons suffering from refractory primary generalized tonic-clonic epilepsy seizures, i.e. following a failure with two appropriate and tolerated antiepileptic drugs (used as monotherapy or combined).

#### PIMECROLIMUS:

- ◆ for treatment of atopic dermatitis in children, where a topical corticosteroid treatment has failed.

#### PIOGLITAZONE HYDROCHLORIDE:

- ◆ for treatment of type-2 diabetic persons:
  - in association with metformin where a sulfonylurea is contraindicated, not tolerated or ineffective;
  - in association with a sulfonylurea where metformin is contraindicated, not tolerated or ineffective;
  - where metformin and a sulfonylurea cannot be used because of a contraindication or an intolerance to those drugs;
  - in association with metformin and a sulfonylurea where going to insulin therapy is indicated but the person is not in a position to receive it;
  - who are suffering from renal failure.

However, pioglitazone remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 1 October 2009 and if its cost was already covered under that plan as part of the indications provided in the appendix hereto.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

*For information purposes, the association of pioglitazone and insulin and the association of rosiglitazone and insulin increase the risk of congestive heart failure.*

#### PIRFENIDONE:

- ◆ for treatment of idiopathic pulmonary fibrosis, in persons:
  - whose forced vital capacity (FVC) is 50% or more of the predicted value;
  - and
  - whose carbon monoxide diffusing capacity is 30% to 79% of the predicted value corrected for hemoglobin;
  - and
  - whose ratio of forced expiratory volume in one second (FEV<sub>1</sub>) to the FVC (FEV<sub>1</sub>/FVC) is 0.70 or more.

The initial authorization and requests for continuation of treatment will be authorized for a maximum duration of 12 months.

Upon subsequent requests, the physician must provide proof of a beneficial clinical effect defined by the absence of deterioration in the patient's condition. Deterioration is understood as a decline in FVC, expressed in a percentage of the predicted value, of 10% or more in absolute value, in the last 12 months.

Where FVC, expressed in a percentage of the predicted value, declines by 10% or more in absolute value over a 12-month period, treatment must cease.

It must be noted that pirfenidone will not be authorized in association with nintedanib.

#### POLYETHYLENE GLYCOL:

- ◆ for treatment of constipation related to a medical condition.

POLYETHYLENE GLYCOL / SODIUM (sulfate) / SODIUM (bicarbonate) / SODIUM (chloride) / POTASSIUM (chloride):

- ◆ for treatment of constipation related to a medical condition.

#### POLYVINYL ALCOHOL:

- ◆ for treatment of keratoconjunctivitis sicca or other severe conditions accompanied by markedly reduced tear production.

#### POMALIDOMIDE:

- ◆ in association with dexamethasone, for third-line treatment or beyond of multiple myeloma in persons:
  - whose disease was refractory to the last line of treatment received;
  - and
  - whose disease has progressed during or following a treatment with bortezomib and with lenalidomide, unless there is a serious intolerance or a contraindication;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is 4 months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression according to the International Myeloma Working Group criteria.

Authorization is granted for a maximum daily dose of 4 mg.

It must be noted that pomalidomide will not be authorized in association with bortezomib.

★ POSACONAZOLE:

- ◆ for prevention of invasive fungal infections in persons having developed neutropenia following chemotherapy to treat acute myeloid leucemia or myelodysplastic syndrome.
- ◆ for treatment of invasive aspergillosis in persons for whom first-line treatment has failed or is contraindicated, or who are intolerant to such a treatment.

★ PRASUGREL:

- ◆ where acute coronary syndrome occurs, for prevention of ischemic vascular manifestations, in association with acetylsalicylic acid, in persons for whom percutaneous coronary angioplasty has been performed.

The duration of the authorization will be 12 months.

PROGESTERONE, Vag. Gel (App.) and Vag. Tab. (eff.):

- ◆ in women who began receiving *in vitro* fertilization services before 11 November 2015, until the end of the ovulatory cycle in which the *in vitro* fertilization services are provided or until there is a pregnancy, whichever occurs first.

The women (insured persons) are considered to have begun receiving *in vitro* fertilization services if their situation is one of the following:

- they themselves have received services required to retrieve eggs or ovarian tissue;
- the person participating with them in the assisted procreation activity has received, as applicable, services required to retrieve sperm by medical intervention or services required to retrieve eggs or ovarian tissue.

PROPRANOLOL HYDROCHLORIDE, Oral Sol.:

- ◆ for treatment of proliferating infantile hemangiomas requiring systematic treatment, that is, those entailing a life-threatening or functional risk, those which are ulcerated and painful or not responding to simple wound care and those associated with a risk of permanent scarring or disfigurement.

PSYLLIUM MUCILLOID:

- ◆ for treatment of constipation related to a medical condition.
- ◆ for treatment of chronic diarrhea.

QUANTITATIVE GLUCOSE BLOOD TEST (ORACLE):

- ◆ for glycemia measurement in diabetic persons with a visual impairment, that is, who are permanently incapable of reading, writing, or moving about in a unfamiliar environment or carrying out their everyday activities or their social roles.

However, the Oracle reactive quantitative blood glucose test strips remain covered for insured persons having used them in the three months preceding 3 February 2021.

#### QUANTITATIVE PROTHROMBIN-TIME BLOOD TEST:

- ◆ to measure the international normalized ratio (INR) in persons who require long-term oral anticoagulation with a vitamin K antagonist and who perform this monitoring using a coagulometer that they own, according to one of the following options:
  - self-testing: the patient measures the INR and communicates the result to a healthcare professional who adjusts, or not, the dosage of the vitamin K antagonist;
  - self-management: the patient measures the INR, interprets the result and, if needed, adjusts the dosage of the vitamin K antagonist himself/herself according to an algorithm.

#### RANIBIZUMAB:

- ◆ for treatment of age-related macular degeneration in the presence of choroidal neovascularization. The eye to be treated must meet the following four criteria:
  - optimal visual acuity after correction between 6/12 and 6/96;
  - linear dimension of the lesion less than or equal to 12 disc areas;
  - absence of significant permanent structural damage to the centre of the macula. The structural damage is defined by fibrosis, atrophy or a chronic disciform scar such that, according to the treating physician, it precludes a functional benefit;
  - progression of the disease in the last three months, confirmed by retinal angiography, optical coherence tomography or recent changes in visual acuity.

The initial request is authorized for a maximum of four months. Upon subsequent requests, the physician must provide information making it possible to establish a beneficial clinical effect, consisting in a stabilization or improvement of the medical condition shown by retinal angiography or by optical coherence tomography. Authorizations will then be given for a maximum of 12 months.

Authorizations are given for one dose per month, per eye. Ranibizumab will not be authorized concomitantly with aflibercept or verteporfin for treatment of the same eye.

However, ranibizumab remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the 12 months before 1 February 2010 and if its cost was already covered under that plan as part of the indications provided in the appendix hereto.

- ◆ for treatment of visual deficiency caused by diabetic macular edema. The eye to be treated must meet the following two criteria:
  - optimal visual acuity after correction between 6/9 and 6/96;
  - thickness of the central retina  $\geq 250$   $\mu\text{m}$ .

The initial request is authorized for a maximum of four months.

Upon subsequent requests, the physician must provide information making it possible to establish a beneficial clinical effect, consisting in a stabilization or an improvement of the visual acuity measured on the Snellen scale and a stabilization or an improvement of the macular edema assessed by optical coherence tomography. Requests for renewal will be authorized for a maximum period of 12 months.

Authorizations are given for a maximum of one dose per month, per eye.

It must be noted that ranibizumab will not be authorized concomitantly with aflibercept to treat the same eye.

- ◆ for treatment of visual deficiency due to macular edema secondary to central retinal vein occlusion. The eye to be treated must meet the following three criteria:

- optimal visual acuity after correction between 6/12 and 6/96;
- thickness of the central retina  $\geq 250$   $\mu\text{m}$ ;
- absence of afferent pupillary defect.

The initial request is authorized for a maximum of four months.

Upon subsequent requests, the physician must provide information making it possible to establish a beneficial clinical effect, consisting in a stabilization or an improvement of the visual acuity measured on the Snellen scale and a stabilization or an improvement of the macular edema assessed by optical coherence tomography. Requests for renewal will be authorized for a maximum period of 12 months. Authorizations are given for a maximum of one dose per month, per eye.

It must be noted that ranibizumab will not be authorized concomitantly with aflibercept to treat the same eye.

- ◆ for treatment of visual deficiency due to choroidal neovascularization secondary to pathologic myopia.

The eye to be treated must meet the following three criteria:

- myopia of at least -6 diopters;
- optimal visual acuity after correction between 6/9 and 6/96;
- presence of intraretinal or subretinal fluid or presence of active leakage secondary to choroidal neovascularization, observed by retinal angiography or by optical coherence tomography.

The initial request is authorized for a maximum duration of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish a beneficial clinical effect, consisting in a stabilization or improvement of the medical condition shown by retinal angiography or by optical coherence tomography. The request for continuation of treatment will be authorized for a maximum of eight months.

Authorizations are given for a maximum of one dose per month, per eye. The maximum total duration of treatment will be 12 months.

It must be noted that ranibizumab will not be authorized concomitantly with verteporfin for treatment of the same eye.

#### RASAGILINE MESYLATE:

- ◆ for persons suffering from Parkinson's disease with motor fluctuations, despite levodopa therapy.

#### REGORAFENIB monohydrate:

- ◆ as monotherapy, for treatment of an inoperable, recurrent or metastatic gastrointestinal stromal tumour in persons:
  - whose disease has progressed despite the administration of a treatment with imatinib and sunitinib, unless there is a serious intolerance or a contraindication;
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

- ◆ as monotherapy, for treatment of hepatocellular carcinoma refractory to sorafenib in persons:

- who tolerated an earlier treatment with sorafenib, tolerance defined as the administration of a dose greater than or equal to 400 mg per day for at least 20 of the last 28 days prior to stopping treatment with sorafenib; and
- whose liver function is preserved, corresponding to Child-Pugh A; and
- whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is 4 months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression, confirmed by imaging.

#### RIBAVIRIN:

- ◆ for treatment of persons suffering from chronic hepatitis C genotype 2 or 3 receiving a sofosbuvir-based treatment, according to the recognized payment indication. Authorization will be granted for a maximum period of 12 weeks for genotype 2 and 24 weeks for genotype 3.
- ◆ for treatment of persons suffering from chronic hepatitis C genotype 1 receiving the ledipasvir / sofosbuvir combination, according to the recognized payment indication. Authorization is granted for a maximum period of 12 weeks.
- ◆ for treatment of persons suffering from chronic hepatitis C with decompensated cirrhosis and receiving the association of sofosbuvir / velpatasvir, according to the recognized payment indication. Authorization is granted for a maximum period of 12 weeks.
- ◆ for treatment of persons suffering from chronic hepatitis C of genotype 1 or 4 who are receiving the association of elbasvir/grazoprevir, according to the recognized payment indication. Authorization is granted for a maximum period of 16 weeks.

#### RIBOCICLIB SUCCINATE:

- ◆ in association with a non-steroidal aromatase inhibitor, as an initial endocrine therapy for unresectable locally advanced or metastatic breast cancer, positive for hormone receptors and without HER-2 receptor overexpression, in women whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

Women in premenopause or perimenopause must receive a luteinizing hormone-releasing hormone (LHRH) agonist.

It must be noted that ribociclib is not authorized in cases of resistance to a non-steroidal aromatase inhibitor administered in a neoadjuvant or adjuvant context for breast cancer. Resistance is defined by a progression occurring during or within 12 months after taking of an aromatase inhibitor.

- ◆ in association with fulvestrant, for treatment of unresectable locally advanced or metastatic breast cancer, positive for the hormone receptors and without HER-2 receptor overexpression, in menopausal women whose ECOG performance status is 0 or 1, and:
  - whose cancer has been newly diagnosed;
  - or
  - whose cancer has progressed during or after treatment with endocrine therapy.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

It must be noted that ribociclib is not authorized following the failure of a CDK 4/6 inhibitor if it was administered for the treatment of breast cancer.

★ RIFAXIMIN:

- ◆ for the prevention of recurrences of hepatic encephalopathy in cirrhotic persons for whom lactulose taken optimally did not adequately prevent the occurrence of overt episodes.

Unless there is serious intolerance or a contraindication, lactulose must be administered concomitantly.

RILUZOLE:

- ◆ for treatment of amyotrophic lateral sclerosis in patients who have had symptoms of the disease for less than 5 years, whose vital capacity is more than 60% of the predicted value and who have not undergone a tracheotomy.

Upon the initial request (new case), the physician must indicate the date on which symptoms of the disease began and the patient's vital capacity measurement, and must confirm that the patient has not undergone a tracheotomy. The maximum duration of the initial authorization is six months.

Upon subsequent requests, and for patients already being treated, the physician must confirm that the patient has not undergone a tracheotomy. The maximum duration of authorization is six months. No renewal will be authorized in the presence of a tracheotomy.

RIOCIGUAT:

- ◆ as monotherapy, for treatment of chronic thromboembolic pulmonary hypertension of WHO functional class II or III that is either inoperable or persistent, or recurrent after a surgical treatment.

Persons must be evaluated and followed up on by physicians working at currently designated centres specializing in the treatment of pulmonary arterial hypertension.

RISANKIZUMAB :

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis:
  - in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or of large plaques on the face, palms or soles or in the genital area;
  - and
  - in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;
  - and
  - where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;
  - and
  - where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of serious intolerance or a serious contraindication, these two agents must be:
    - methotrexate at a dose of 15 mg or more per week;
    - or
    - cyclosporine at a dose of 3 mg/kg or more per day;
    - or
    - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base values;
- or
- a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pre-treatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for risankizumab are given for 150 mg (i.e. two 75 mg injections) on weeks 0 and 4, then every 12 weeks thereafter.

#### RITUXIMAB:

- ◆ for treatment of moderate or severe rheumatoid arthritis, in association with methotrexate, or with leflunomide in the case of intolerance or contraindication to methotrexate.

Upon the initial request:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment of sufficient duration with a tumour necrosis factor alpha inhibitor (anti-TNF $\alpha$ ) included on the lists of medications as first-line biological treatment of rheumatoid arthritis, or with a biological agent having a different mechanism of action, included for the same purposes, when there is a serious intolerance or contraindication to anti-TNF $\alpha$ .

The initial authorization is given for a maximum period of six months.

When requesting continuation of treatment, the physician must provide information making it possible to establish a treatment response observed during the first six months after the last perfusion. A treatment response is defined by:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Administering a subsequent treatment is possible if the disease is still not in remission or if, following attainment of a remission, the disease is reactivated.

Requests for continuation of treatment are authorized for a minimum period of 12 months and a maximum of 2 treatments.

A treatment comprises 2 perfusions of rituximab of 1 000 mg each.

RIVAROXABAN, 2,5 mg:

- ◆ for secondary prevention of cardiovascular events, in combination with low dose acetylsalicylic acid, in patients with coronary artery disease and peripheral artery disease.

★ RIVAROXABAN, 10 mg:

- ◆ for prevention of venous thromboembolism following a knee arthroplasty.

The maximum duration of the authorization is 14 days.

- ◆ for prevention of venous thromboembolism following a hip arthroplasty.

The maximum duration of the authorization is 35 days.

★ RIVAROXABAN, 15 mg and 20 mg:

- ◆ for the treatment of persons suffering from venous thromboembolism (deep vein thrombosis and pulmonary embolism).

Authorizations are granted for a 15-mg dose twice a day during the first three weeks of treatment, followed by a daily dose of 20 mg.

The maximum duration of the authorization for the treatment of deep vein thrombosis is 6 months.

- ◆ for the prevention of stroke and systemic embolic event in persons with non-valvular atrial fibrillation requiring anticoagulant therapy.

RIVASTIGMINE:

- ◆ as monotherapy for persons suffering from Alzheimer's disease at the mild or moderate stage.

Upon the initial request, the following elements must be present:

- an MMSE score of 10 to 26, or as high as 27 or 28 if there is proper justification;
- medical confirmation of the degree to which the person is affected (intact domain, mildly, moderately or severely affected) in the following five domains:
  - intellectual function, including memory;
  - mood;
  - behaviour;
  - autonomy in activities of daily living (ADL) and in instrumental activities of daily living (IADL);
  - social interaction, including the ability to carry on a conversation.

The duration of an initial authorization for treatment with rivastigmine is six months from the beginning of treatment.

However, where the cholinesterase inhibitor is used following treatment with memantine, the concomitant use of both medications is authorized for one month.

Upon subsequent requests, the physician must provide evidence of a beneficial effect confirmed by each of the following elements:

- an MMSE score of 10 or more, unless there is proper justification;
- a maximum decrease of 3 points in the MMSE score per six-month period compared with the previous evaluation, or a greater decrease accompanied by proper justification;
- stabilization or improvement of symptoms in one or more of the following domains:
  - intellectual function, including memory;
  - mood;
  - behaviour;
  - autonomy in activities of daily living (ADL) and in instrumental activities of daily living (IADL);
  - social interaction, including the ability to carry on a conversation.

The maximum duration of authorization is 12 months.

#### ROSIGLITAZONE MALEATE:

- ◆ for treatment of type-2 diabetic persons:
  - in association with metformin where a sulfonylurea is contraindicated, not tolerated or ineffective;
  - in association with a sulfonylurea where metformin is contraindicated, not tolerated or ineffective;
  - where metformin and a sulfonylurea cannot be used because of a contraindication or an intolerance to those drugs;
  - in association with metformin and a sulfonylurea where going to insulin therapy is indicated but the person is not in a position to receive it;
  - who are suffering from renal failure.

However, rosiglitazone remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 1 October 2009 and if its cost was already covered under that plan as part of the indications provided in the appendix hereto.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

*For information purposes, the association of pioglitazone and insulin and the association of rosiglitazone and insulin increase the risk of congestive heart failure.*

#### ROSIGLITAZONE MALEATE / METFORMIN HYDROCHLORIDE:

- ◆ for treatment of type-2 diabetic persons under treatment with metformin and a thiazolidinedione and whose daily doses have been stable for at least three months.

These persons must also fulfill the requirements of the recognized payment indication for thiazolidinediones.

However, the rosiglitazone / metformin association remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 1 October 2009 and if its cost was already covered under that plan as part of the indications provided in the appendix hereto.

#### ROTIGOTINE:

- ◆ in association with levodopa, for treatment of patients suffering from advanced-stage Parkinson's disease.

#### RUFINAMIDE:

- ◆ for persons suffering from Lennox-Gastaut syndrome where at least three antiepileptics are contraindicated, not tolerated or ineffective.

The initial request is authorized for a maximum of three months.

Upon subsequent requests, the physician must provide information making it possible to establish a treatment response, i.e. a decrease in the number or intensity of convulsive seizures or quicker recovery after a postictal phase. Authorizations for subsequent requests will be granted for a period of 12 months.

#### RUXOLITINIB PHOSPHATE:

- ◆ for treatment of splenomegaly associated with primary myelofibrosis, myelofibrosis secondary to polycythemia vera or essential thrombocythemia in persons with:
  - a palpable spleen at 5 cm or more under the left costal margin, accompanied by basic imaging;
  - and
  - an intermediate-2 or high-risk disease according to the IPSS (International Prognostic Scoring System);
  - and

- an ECOG performance status  $\leq 3$ .

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by significant reduction of the splenomegaly, confirmed by imaging or by a physical examination, and by improvement of the symptomatology in patients who were initially symptomatic.

- ◆ to control the hematocrit in persons suffering from polycythemia vera:

- whose disease is resistant to hydroxyurea;  
and
- whose ECOG performance status is  $\leq 2$ .

Resistance to hydroxyurea is defined, following a treatment lasting at least three months at a minimum dose of 2 g daily or lasting at least three months at the highest effective dose that does not result in grade 3 or more hematologic, dermatologic or digestive toxicity, by:

- resorting to more than one phlebotomy over a three-month period to maintain hematocrit below 45%;  
or
- a white blood cell count exceeding  $10 \times 10^9/l$  and a platelet count exceeding  $400 \times 10^9/l$ ;  
or
- the presence of persistent symptoms associated with splenomegaly.

The first authorization is for a maximum duration of four months.

For the second authorization, the physician must provide evidence of a beneficial clinical effect through reduced use of phlebotomy to maintain the hematocrit below 45%, an improvement of thrombocytosis and leukocytosis or an improvement of symptoms associated with splenomegaly. The second authorization is for a maximum duration of six months.

Upon subsequent requests, the physician must provide evidence of a maintained beneficial clinical effect on the frequency of phlebotomy procedures, white blood cells and platelets counts or symptoms associated with splenomegaly. Subsequent authorizations are for a maximum duration of six months.

#### SACUBITRIL / VALSARTAN:

- ◆ for persons suffering from New York Heart Association (NYHA) class II or III heart failure with left ventricular systolic dysfunction (with ejection fraction  $\leq 40\%$ );
  - in association with a beta blocker unless there is a contraindication or an intolerance;  
and
  - as a replacement for a treatment that has been underway for at least four weeks with an angiotensin converting enzyme inhibitor (ACEI) or an angiotensin II receptor antagonist (ARA).

#### SALBUTAMOL SULFATE, Pd for Inh.:

- ◆ for treatment of persons having difficulty using an inhalation device other than the Diskus™ device or who are already receiving another drug through this device.

#### SALMETEROL XINAFOATE / FLUTICASONE PROPIONATE:

- ◆ for treatment of asthma and other reversible obstructive diseases of the respiratory tract in persons whose control of the disease is insufficient despite the use of an inhaled corticosteroid.

The associations of formoterol fumarate dihydrate / budesonide and salmeterol xinafoate / fluticasone propionate remain covered for persons insured with RAMQ who obtained a reimbursement in the 365 days preceding 1 October 2003.

- ◆ for maintenance treatment of moderate or severe chronic obstructive pulmonary disease (COPD) in persons:
  - who have shown at least two exacerbations of the symptoms of the disease in the last year, despite regular use through inhalation of two long-acting bronchodilators in association. Exacerbation is understood as a sustained and repeated aggravation of the symptoms requiring intensified pharmacological treatment, for instance, the addition of oral corticosteroids, a precipitated medical visit or a hospitalization;
  - or
  - who have shown at least one exacerbation of the symptoms of the disease in the last year that required hospitalization, despite regular use through inhalation of two long-acting bronchodilators in association;
  - or
  - whose disease is associated with an asthmatic component, demonstrated by factors defined by a history of asthma or atopy during childhood, by high blood eosinophilia or by an improvement in the FEV1 after bronchodilators of at least 12% and 200 ml.

The initial authorization is for a maximum duration of 12 months.

For a subsequent request, for persons having obtained the treatment due to exacerbations, the authorization may be granted if the physician considers that the expected benefits outweigh the risks incurred. For persons having obtained the treatment due to an asthmatic component, the physician will have to provide proof of an improvement of the disease symptoms.

It must be noted that this association (long-acting  $\beta_2$  agonist and inhaled corticosteroid) must not be used concomitantly with a long-acting  $\beta_2$  agonist alone or with an association of a long-acting  $\beta_2$  agonist and a long-acting antimuscarinic.

Nevertheless, the association of salmeterol xinafoate / fluticasone propionate remains covered under the basic prescription drug insurance plan for insured persons having used this drug in the 12 months preceding 24 March 2016.

#### SAPROPTERIN DIHYDROCHLORIDE:

- ◆ for women suffering from phenylketonuria who wish to procreate, a two-month trial period is authorized to determine those responding to sapropterine.

Thereafter, the physician will have to provide the following proof:

- a response to sapropterine defined by an average decrease of serum phenylalanine concentration of at least 30%;
- and
- a serum phenylalanine concentration greater than 360  $\mu\text{mol/l}$  despite a low phenylalanine diet.

Authorization will be granted for the period during which the women actively attempt to procreate, up to the end of their pregnancy.

#### SARILUMAB:

- ◆ for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than 5 months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:

- a positive rheumatoid factor;
- radiologically measured erosions;
- a score of more than 1 on the Health Assessment Questionnaire (HAQ);
- an elevated C-reactive protein level;
- an elevated sedimentation rate;

and

- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be methotrexate at a dose of 20 mg or more per week.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20 % in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20 % or more in the C-reactive protein level;
  - a decrease of 20 % or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a period of 12 months.

Authorizations for sarilumab are given for a maximum dose of 200 mg every 2 weeks.

#### SAXAGLIPTIN:

- ◆ for treatment of type-2 diabetic persons:

- in association with metformin where a sulfonylurea is contraindicated, not tolerated or ineffective;
- or
- in association with a sulfonylurea where metformin is contraindicated, not tolerated or ineffective.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA1c) adapted to the patient.

#### SAXAGLIPTIN / METFORMIN HYDROCHLORIDE:

- ◆ for treatment of type-2 diabetic persons:

- where a sulfonylurea is contraindicated, not tolerated or ineffective;
- and
- where the optimal maximum dose of metformin has been stable for at least one month.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA1c) adapted to the patient.

#### SECUKINUMAB:

- ◆ for persons suffering from a severe form of chronic plaque psoriasis:

- in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or of large plaques on the face, palms or soles or in the genital area;
- and
- in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;
- and

- where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;

and

- where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of serious intolerance or a contraindication, these two agents must be:
  - methotrexate at a dose of 15 mg or more per week;
  - or
  - cyclosporine at a dose of 3 mg/kg or more per day;
  - or
  - acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base values;
- or
- a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pre-treatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for secukinumab are given for 300 mg on weeks 0, 1, 2, 3 and 4, then every month.

◆ for treatment of moderate or severe psoriatic arthritis of rheumatoid type:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following four elements must be present:
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
 and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is a serious intolerance or a contraindication, one of the two drugs must be:
  - methotrexate at a dose of 20 mg or more per week;
  - or
  - sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum period of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for secukinumab are given for a maximum of 300 mg on weeks 0, 1, 2, 3 and 4, then every month.

- ◆ for treatment of moderate or severe psoriatic arthritis of a type other than rheumatoid:
  - prior to the beginning of treatment, the person must have at least three joints with active synovitis and a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - and
  - the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is a serious intolerance or a contraindication, one of the two drugs must be:
    - methotrexate at a dose of 20 mg or more per week;
    - or
    - sulfasalazine at a dose of 2 000 mg per day.

The initial request is authorized for a maximum period of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for secukinumab are given for a maximum of 300 mg on weeks 0, 1, 2, 3 and 4, then every month.

#### SELEXIPAG:

- ◆ for treatment of pulmonary arterial hypertension of WHO functional class III, whether idiopathic or associated with connectivitis, that is symptomatic despite optimal conventional treatment.

Persons must be evaluated and followed up on by physicians working at designated centres specializing in the treatment of pulmonary arterial hypertension.

#### SEMAGLUTIDE:

- ◆ for treatment of type-2 diabetic persons, in association with metformin, where a sulfonylurea is contraindicated, not tolerated or ineffective.

Authorization is given for a weekly maximum dose of 1 mg.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA1c) adapted to the patient.

#### SENNOSIDES A & B:

- ◆ for treatment of constipation related to a medical condition.

#### SEVELAMER carbonate:

- ◆ as a phosphate binder in persons suffering from severe renal failure where a calcium salt is contraindicated, is not tolerated, or does not make it possible to optimally control the hyperphosphatemia.

It must be noted that sevelamer will not be authorized concomitantly with lanthanum hydrate or sucroferric oxyhydroxide.

#### SEVELAMER HYDROCHLORIDE:

- ◆ as a phosphate binder in persons suffering from severe renal failure where a calcium salt is contraindicated, is not tolerated, or does not make it possible to optimally control the hyperphosphatemia.

It must be noted that sevelamer will not be authorized concomitantly with lanthanum hydrate or sucroferric oxyhydroxide.

#### SILDENAFIL CITRATE:

- ◆ for treatment of pulmonary arterial hypertension (WHO functional class III) that is either idiopathic or related to connectivitis and that is symptomatic despite the optimal conventional treatment.

The person must be evaluated and followed up on by physicians working at designated centres specializing in the treatment of pulmonary arterial hypertension.

Authorizations will be given for 20 mg three times per day.

#### SITAGLIPTIN:

- ◆ for treatment of type-2 diabetic persons:
  - as monotherapy where metformin and a sulfonylurea are contraindicated or not tolerated;  
or
  - in association with metformin, where a sulfonylurea is contraindicated, not tolerated or ineffective.
- ◆ Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

#### SITAGLIPTIN / METFORMIN HYDROCHLORIDE:

- ◆ for treatment of type-2 diabetic persons:
  - where a sulfonylurea is contraindicated, not tolerated or ineffective;  
and
  - where the optimal maximum dose of metformin has been stable for at least one month.

Ineffectiveness means the non-attainment of the value of glycated hemoglobin (HbA<sub>1c</sub>) adapted to the patient.

#### SODIUM PHOSPHATE MONOBASIC / SODIUM PHOSPHATE DIBASIC:

- ◆ for treatment of constipation related to a medical condition.

#### SOFOSBUVIR:

- ◆ in association with ribavirin, for treatment of persons suffering from chronic hepatitis C genotype 2:
  - who have never received an anti-HCV treatment;  
or
  - who have a contraindication or a serious intolerance to pegylated interferon alfa;  
or

- who have experienced therapeutic failure with an association of ribavirin / pegylated interferon alfa.

Authorization is granted for a maximum period of 12 weeks.

- ◆ in association with ribavirin, for treatment of persons suffering from chronic hepatitis C genotype 3:
  - who have a contraindication or a serious intolerance to pegylated interferon alfa; or
  - who have already experienced therapeutic failure with an association of ribavirin / pegylated interferon alfa.

Authorization is granted for a maximum period of 24 weeks.

#### SOFOSBUVIR / VELPATASVIR:

- ◆ in association with ribavirin, for treatment of persons suffering from chronic hepatitis C with decompensated cirrhosis.

Authorization is granted for a maximum period of 12 weeks.

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C without decompensated cirrhosis

Authorization is granted for a maximum period of 12 weeks.

#### SOFOSBUVIR / VELPATASVIR / VOXILAPREVIR:

- ◆ as monotherapy, for treatment of persons suffering from chronic hepatitis C, without decompensated cirrhosis, infected by:
  - genotype 1, 2, 3, 4, 5 or 6 and having experienced a therapeutic failure with a treatment containing a NS5A inhibitor; or
  - genotype 1, 2, 3 or 4 and having experienced a therapeutic failure with a sofosbuvir-based treatment, but without a NS5A inhibitor.

Authorization is granted for a maximum period of 12 weeks.

#### SOMATOTROPIN:

- ◆ for treatment of children and adolescents suffering from delayed growth due to insufficient secretion of endogenous growth hormone, where they meet the following criteria:
  - untermated growth, a growth rate for their bone age below the 25th percentile (calculated over at least a 12-month period), and a somatotropin serum or plasma level below 8 µg/L in two pharmacological stimulation tests or between 8 and 10 µg/L if the tests are repeated twice at a 6-month interval.

The 12-month observation period does not apply to children suffering from hypoglycemia secondary to growth hormone deficiency.

  - excluded are children and adolescents suffering from achondroplasia or delayed growth of a genetic or familial type;
  - excluded are children and adolescents whose bone age has reached 15 years for girls and 16 years for boys;
  - excluded are children and adolescents whose growth rate during treatment falls below 2 cm per year when evaluated on two consecutive visits (at a 3-month interval).
- ◆ for treatment of growth hormone deficiency in persons whose bone growth has terminated and who meet the following criteria:

- somatotropin serum or plasma level between 0 and 3 µg/mL in a pharmacological stimulation test.

In persons who have a multiple hypophyseal hormone deficiency, and to confirm a deficiency acquired during childhood or adolescence, only one pharmacological stimulation test is necessary. In the case of an isolated growth hormone deficiency, a second test is required.

The insulin hypoglycemia test is recommended. If this test is contraindicated, the glucagon test may be substituted for it.

- in the case of adult onset, the deficiency must be secondary to a hypophyseal or hypothalamic disease, surgery, radiotherapy or trauma.

◆ for treatment of Turner's syndrome:

- the syndrome must have been demonstrated by a karyotype compatible with this diagnosis (complete absence or structural anomaly of one of the X chromosomes). This karyotype may be homogeneous or may be a mosaic;
- excluded are girls whose bone age has reached 14 years;
- excluded are girls whose growth rate, during treatment, falls below 2 cm per year when evaluated on two consecutive visits (at a 3-month interval).

SOMATOTROPIN – Delayed growth and Turner's syndrome:

◆ for treatment of children and adolescents suffering from delayed growth due to insufficient secretion of endogenous growth hormone, where they meet the following criteria:

- untermiated growth, a growth rate for their bone age below the 25th percentile (calculated over at least a 12-month period), and a somatotropin serum or plasma level below 8 µg/L in two pharmacological stimulation tests or between 8 and 10 µg/L if the tests are repeated twice at a 6-month interval.

The 12-month observation period does not apply to children suffering from hypoglycemia secondary to growth hormone deficiency.

- excluded are children and adolescents suffering from achondroplasia or delayed growth of a genetic or familial type;
- excluded are children and adolescents whose bone age has reached 15 years for girls and 16 years for boys;
- excluded are children and adolescents whose growth rate during treatment falls below 2 cm per year when evaluated on two consecutive visits (at a 3-month interval).

◆ for treatment of Turner's syndrome:

- the syndrome must have been demonstrated by a karyotype compatible with this diagnosis (complete absence or structural anomaly of one of the X chromosomes). This karyotype may be homogeneous or may be a mosaic;
- excluded are girls whose bone age has reached 14 years;
- excluded are girls whose growth rate, during treatment, falls below 2 cm per year when evaluated on two consecutive visits (at a 3-month interval).

SOMATOTROPIN – Delayed growth due to renal insufficiency:

◆ for treatment of children and adolescents suffering from delayed growth related to chronic renal insufficiency until they undergo a kidney transplant, where they meet the following criteria:

- untermated growth, a glomerular filtration rate  $\leq 1.25 \text{ mL/s./1.73m}^2$  (75 mL/min./  $1.73\text{m}^2$ ), and a Z score (HSDS)  $\leq$  a standard deviation of -2 (Z score = height compared to the average of normal values for their age and sex) or a  $\Delta$  Z score (HSDS)  $<$  a standard deviation of 0 where their height is below the 10th percentile (based on observation periods of at least six months for children over the age of one and at least three months for children under the age of one);
- excluded are children and adolescents in whom, during treatment, no response (no increase in  $\Delta$  of Z score (HSDS) in the first 12 months of treatment) is observed;
- excluded are children and adolescents in whom, during treatment, an ossification of the conjugative cartilages is observed or who have reached their final expected height;
- excluded are children and adolescents whose growth rate, evaluated on two consecutive visits (at a 3-month interval), falls below 2 cm per year during treatment.

#### SORAFENIB TOSYLATE:

- ◆ for treatment of advanced-stage hepatocellular carcinoma in persons:
  - whose disease has progressed following a surgery or locoregional therapy, unless they do not qualify;
  - and
  - whose liver function is preserved, corresponding to Child-Pugh A;
  - and
  - whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is 4 months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression, confirmed by imaging.

It must be noted that sorafenib is not authorized following a failure of lenvatinib if it was administered to treat hepatocellular carcinoma.

#### STIRIPENTOL:

- ◆ for treatment of persons suffering from Dravet syndrome, in association with clobazam and valproate, if these latter drugs have not allowed for adequate control of the symptoms of the disease.

Before it can be concluded that these treatments are ineffective, the drugs must have been titrated optimally, unless there is a proper justification.

At the beginning of treatment and for each subsequent request, the treating physician must provide the monthly number of generalized seizures.

The initial authorization is for a maximum duration of four months.

The authorization will be renewed if it has been demonstrated that the treatment allowed for a reduction of approximately 50% in the monthly frequency of generalized seizures.

Subsequent authorizations will be for maximum periods of 12 months.

#### SUNITINIB MALATE:

- ◆ for treatment of an inoperable, recurrent or metastatic gastrointestinal stromal tumour, in persons whose ECOG performance status is  $\leq 2$  and:
  - who have not responded to an imatinib treatment (primary resistance);
  - or
  - whose cancer has evolved after initially responding to imatinib (secondary resistance);
  - or
  - who have a serious intolerance to imatinib.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

- ◆ for first-line treatment of a metastatic renal adenocarcinoma characterized by the presence of clear cells, in persons whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is three cycles (18 weeks).

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging.

- ◆ for treatment of unresectable and evolutive, well-differentiated pancreatic neuroendocrine tumours at an advanced or metastatic stage in persons whose ECOG performance status is 0 or 1.

The initial authorization is for a maximum duration of four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging. Subsequent authorizations will be for maximum durations of six months.

It must be noted that sunitinib will not be authorized in association with everolimus, nor will it be following failure with everolimus if it was administered to treat pancreatic neuroendocrine tumours.

★ TACROLIMUS, L.A. Tab.:

- ◆ for the prophylaxis of organ rejection in adults who have received a kidney transplant.

TACROLIMUS, Top. Oint.:

- ◆ for treatment of atopic dermatitis in children, following failure of a treatment with a topical corticosteroid.
- ◆ for treatment of atopic dermatitis in adults, following failure of at least two treatments with a different topical corticosteroid of intermediate strength or greater, or following failure of at least two treatments on the face with a different low-strength topical corticosteroid.

TADALAFIL:

- ◆ for treatment of pulmonary arterial hypertension (WHO functional class III) that is either idiopathic or related to connectivitis and that is symptomatic despite the optimal conventional treatment.

The persons must be evaluated and followed up on by physicians working at designated centres specializing in the treatment of pulmonary arterial hypertension.

Authorizations will be given for 40 mg once per day.

TEMOZOLOMIDE:

- ◆ for treatment of persons suffering from anaplastic astrocytoma or glioblastoma multiforme and in whom a recurrence or progression of the disease is observed after administration of a first-line treatment.
- ◆ in association with radiotherapy, for first-line treatment of persons suffering from glioblastoma multiforme or anaplastic astrocytoma.

TERIFLUNOMIDE:

- ◆ for treatment of persons suffering from relapsing multiple sclerosis who have had one relapse in the last year and whose EDSS score is less than 7.

Authorization for an initial request is granted for a maximum of one year. The same duration applies to requests for continuation of treatment. In these latter cases, however, the physician must provide evidence of a beneficial effect defined by the absence of deterioration. The EDSS score must remain under 7.

**TERIPARATIDE:**

- ◆ for treatment of osteoporosis in menopausal women exposed to a high risk of fracture, specifically:
  - whose a T-score measured at the hip, femoral neck or lumbar spine is less than or equal to -2.5 -;
  - and
  - who have shown an inadequate response to antiresorptive therapy, defined by:
    - a new fragility fracture following continued taking of the antiresorptive therapy for at least 12 months;
    - or
    - significant decrease in mineral bone density, less than the T-score observed during pretreatment in menopausal women with an history of osteoporotic fractures, despite continued taking of the antiresorptive therapy for at least 24 months.

The total duration of the authorization is 18 months.

**THALIDOMIDE:**

- ◆ in association with melphalan and prednisone, for first-line treatment of multiple myeloma, in persons who are not candidates for stem cell transplant.

The maximum duration of each authorization is six months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression according to the International Myeloma Working Group criteria.

It must be noted that thalidomide will not be authorized in association with bortezomib.

**★ TICAGRELOR:**

- ◆ where acute coronary syndrome occurs, for prevention of ischemic vascular manifestations, in association with acetylsalicylic acid.

The maximum duration of the authorization is 12 months.

**★ TIGECYCLINE:**

- ◆ for treatment of proven or presumed methicillin-resistant staphylococcus aureus (MRSA) polymicrobial complicated skin infections:
  - necessitating antibiotherapy targeting simultaneously the MRSA and Gram-negative bacteria;
  - and
  - where vancomycin in combination with another antibiotic is ineffective, contraindicated or not tolerated.
- ◆ for treatment of complicated intra-abdominal infections where first-line treatment has failed, is contraindicated or is not tolerated.

**TIPRANAVIR:**

- ◆ for treatment, in association with other antiretrovirals, of HIV-infected persons:
  - who have tried, since the beginning of their antiretroviral therapy, at least one therapy that included delavirdine, efavirenz or nevirapine, unless there is a primary resistance to one of those drugs, and that resulted:
    - in a documented virological failure, after at least three months of treatment with an association of several antiretroviral agents;
  - or

- in serious intolerance to one of those agents, to the point of calling into question the continuation of the antiretroviral treatment;
- and
- who have tried, since the beginning of their antiretroviral therapy, at least one therapy that included another protease inhibitor and that resulted:
    - in a documented virological failure, after at least three months of treatment with an association of several antiretroviral agents;
- or
- in serious intolerance to at least three protease inhibitors, to the point of calling into question the continuation of the antiretroviral treatment.

Where a therapy including a non-nucleoside reverse transcriptase inhibitor cannot be used because of a primary resistance to delavirdine, efavirenz or nevirapine, a trial of at least two therapies, each including a protease inhibitor, is necessary and must have resulted in the same conditions as those listed above.

- ◆ for first line treatment, in association with other antiretrovirals, of HIV infected persons for whom a laboratory test showed an absence of sensitivity to other protease inhibitors, coupled with a resistance to one or the other class of nucleoside reverse transcriptase inhibitors and non-nucleoside reverse transcriptase inhibitors, or to both, and:
    - whose current viral load and another dating back at least one month are greater than or equal to 500 copies/mL;
- and
- whose current CD4 lymphocyte count and another dating back at least one month are less than or equal to 350/μL;
- and
- for whom darunavir or tipranavir is necessary to establish an effective therapeutic regimen.

#### TIZANIDINE HYDROCHLORIDE:

- ◆ for treatment of spasticity where baclofen is ineffective, contraindicated or not tolerated.

#### TOBRAMYCIN SULFATE, Inh. Sol. and Inh. Pd.:

- ◆ for treatment of chronic *Pseudomonas aeruginosa* infections in persons suffering from cystic fibrosis, where deterioration of the person's clinical condition is observed despite the conventional treatment or where the person is allergic to preservatives.

#### TOCILIZUMAB, I.V. Perf. Sol.:

- ◆ for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
    - a positive rheumatoid factor;
    - radiologically measured erosions;
    - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
    - an elevated C-reactive protein level;
    - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be methotrexate at a dose of 20 mg or more per week.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20 % in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20 % or more in the C-reactive protein level;
  - a decrease of 20 % or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a period of 12 months.

Authorizations for tocilizumab are given for a maximum dose of 8 mg/kg every four weeks.

- ◆ for treatment of moderate or severe systemic juvenile idiopathic arthritis, with predominant articular manifestations.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have five or more joints with active synovitis and one of the following two elements:
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with methotrexate at a dose of 15 mg/m<sup>2</sup> or more (maximum 20 mg per dose) per week for at least three months, unless there is intolerance or a contraindication;

and

- the disease must still be active despite treatment with a biological response modulating agent titrated optimally during at least five months, unless there is intolerance or a contraindication.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20 % in the number of joints with active synovitis and one of the following six elements:
  - a decrease of 20 % or more in the C-reactive protein level;
  - a decrease of 20 % or more in the sedimentation rate;
  - an decrease of 0.13 in the Childhood Health Assessment Questionnaire (CHAQ) score or a return to school;
  - an improvement of at least 20 % in the physician's overall assessment (visual analogue scale);
  - an improvement of at least 20 % in the person's or parent's overall assessment (visual analogue scale);
  - a decrease of 20 % or more in the number of affected joints with limited movement.

Requests for continuation of treatment are authorized for a period of 12 months.

Authorizations for tocilizumab are given for doses of 12 mg/kg every two weeks for children weighing less than 30 kg, and 8 mg/kg every two weeks for children weighing 30 kg or more.

- ◆ for treatment of moderate or severe systemic juvenile idiopathic arthritis, with predominant systemic manifestations.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have had one or more joints with active synovitis and one of the following three elements:

- an elevated C-reactive protein level;
- an elevated sedimentation rate;
- another sign of chronic inflammation, such as anemia, thrombocytosis, leukocytosis;

and

- at least one systemic illness among the following:
  - persistence of fever episodes ( $\geq 38^{\circ}\text{C}$ );
  - typical skin eruption;
  - adenomegaly, hepatomegaly or splenomegaly;
  - serositis or serous effusion.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- two of the following elements or a decrease of at least 20% in the number of joints with active synovitis and one of the following six elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.13 in the Childhood Health Assessment Questionnaire (CHAQ) score or a return to school;
  - an improvement of at least 20% in the physician's overall assessment (visual analogue scale);
  - an improvement of at least 20% in the person's or parent's overall assessment (visual analogue scale);
  - a decrease of 20% or more in the number of affected joints with limited movement;

and

- disappearance of fever episodes.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for tocilizumab are given for doses of 12 mg/kg every two weeks for children weighing less than 30 kg, and 8 mg/kg every two weeks for children weighing 30 kg or more.

- ◆ for treatment of moderate or severe juvenile idiopathic arthritis (juvenile rheumatoid arthritis and juvenile chronic arthritis) of the polyarticular type.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- the person must, prior to the beginning of treatment, have five or more joints with active synovitis and one of the following two elements must be present:
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;

and

- the disease must still be active despite treatment with methotrexate at a dose of 15 mg/m<sup>2</sup> or more (maximum dose of 20 mg) per week for at least three months, unless there is intolerance or a contraindication.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following six elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - an decrease of 0.13 in the Childhood Health Assessment Questionnaire (CHAQ) score or a return to school;
  - an improvement of at least 20% in the physician's overall assessment (visual analogue scale);

- an improvement of at least 20% in the person's or parent's overall assessment (visual analogue scale);
- a decrease of 20% or more in the number of affected joints with limited movement.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for tocilizumab are given for doses of 10 mg/kg every four weeks for children weighing less than 30 kg, and 8 mg/kg every four weeks for children weighing 30 kg or more.

TOCILIZUMAB, S.C. Inj. Sol. (syr) and S.C. Inj. Sol. (pen):

- ◆ for treatment of moderate or severe rheumatoid arthritis.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
  - a positive rheumatoid factor;
  - radiologically measured erosions;
  - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
  - an elevated C-reactive protein level;
  - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. Unless there is serious intolerance or a serious contraindication, one of the two drugs must be methotrexate at a dose of 20 mg or more per week.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a period of 12 months.

Authorizations for tocilizumab S.C. Inj. Sol. are given for a maximum dose of 162 mg every week.

- ◆ For adjuvant treatment to corticotherapy, administered in decreasing doses, for persons suffering from giant-cell arteritis.

Authorization is granted for a maximum duration of 52 weeks per episode.

Authorization may be granted following any new episode of the disease, according to the treatment terms and conditions previously mentioned for a first episode, this for a maximum duration of 52 weeks.

TOCOPHERYL ACETATE (DL-ALPHA):

- ◆ for prevention and treatment of neurological manifestations associated with malabsorption of vitamin E.

TOFACITINIB CITRATE:

- ◆ in association with methotrexate, for treatment of moderate or severe rheumatoid arthritis, unless there is a serious intolerance or contraindication to methotrexate.

Upon initiation of treatment or if the person has been receiving the drug for less than five months:

- prior to the beginning of treatment, the person must have eight or more joints with active synovitis and one of the following five elements must be present:
    - a positive rheumatoid factor;
    - radiologically measured erosions;
    - a score of more than 1 on the Health Assessment Questionnaire (HAQ);
    - an elevated C-reactive protein level;
    - an elevated sedimentation rate;
- and
- the disease must still be active despite treatment with two disease-modifying anti-rheumatic drugs, used either concomitantly or not, for at least three months each. One of the two drugs must be methotrexate at a dose of 20 mg or more per week unless there is a serious intolerance or a contraindication to this dose.

The initial request is authorized for a maximum of five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

- ◆ for treatment of adults suffering from moderate to severe ulcerative colitis that is still active despite a treatment with corticosteroids and immunosuppressors, unless there is a serious intolerance or a contraindication:
    - in the presence of a Mayo score of 6 to 12 points;
- and
- in the presence of a Mayo endoscopic subscore of at least 2 points.

The initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease in the Mayo score of at least 3 points and at least 30 %, or a decrease in the partial Mayo score of at least 2 points;
- and
- a Mayo rectal bleeding subscore of 0 or 1 point, or a decrease in this subscore of at least 1 point.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

#### TRAMETINIB:

- ◆ in association with dabrafenib, for first-line or second-line treatment, following the failure of chemotherapy or immunotherapy targeting the PD-1 or the CTLA-4, of an unresectable or metastatic melanoma with a BRAF V600 mutation, in persons whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging or based on a physical examination.

It must be noted that trametinib, in association with dabrafenib, is not authorized following the failure of a treatment associating a BRAF inhibitor and a MEK inhibitor if it was administered to treat a melanoma.

- ◆ in association with dabrafenib, for adjuvant treatment of a melanoma expressing a V600 mutation of the BRAF gene with regional lymph node involvement, or with in-transit or satellite metastases without lymph node involvement, in persons:
  - whose melanoma has been completely resected;
  - and
  - whose last resection was performed in the previous last 12 weeks;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease recurrence.

The maximum duration of the treatment is 12 months.

- ◆ as monotherapy, for first-line or second-line treatment following a failure with chemotherapy or with immunotherapy targeting the PD-1 or the CTLA-4, of an unresectable or metastatic melanoma with a BRAF V600 mutation, in persons:
  - with a contraindication or a serious intolerance to a BRAF inhibitor;
  - and
  - whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging or based on a physical examination.

It must be noted that trametinib is not authorized after a BRAF inhibitor has failed if it was administered to treat a melanoma.

#### TRANSDOLAPRIL / VERAPAMIL (HYDROCHLORIDE):

- ◆ for persons already being treated with an angiotensin converting enzyme inhibitor and verapamil taken separately.

#### TREPROSTINIL SODIUM:

- ◆ for treatment of pulmonary arterial hypertension of WHO functional class III or IV that is either idiopathic or associated with connectivitis and that is symptomatic despite the optimal conventional treatment.

Persons must be evaluated and followed up on by physicians working at designated centres specializing in the treatment of pulmonary arterial hypertension.

TRETINOIN, Top. Cr. and Top. Gel:

- ◆ for treatment of acne or other skin diseases necessitating a keratolytic treatment.

TRIFLURIDINE / TIPIRACIL (HYDROCHLORIDE) :

- ◆ as monotherapy, for treatment of metastatic colorectal cancer in persons with an ECOG performance status of 0 or 1 and for whom the following therapies have failed, unless there is a contraindication or a serious intolerance:
  - chemotherapy based on irinotecan and a fluoropyrimidine;  
and
  - chemotherapy based on oxaliplatin and a fluoropyrimidine;  
and
  - a treatment including bevacizumab;  
and
  - in the presence of a non-mutated RAS gene, a treatment including panitumumab or cetuximab.

The maximum duration of each authorization four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect defined by the absence of disease progression, confirmed by imaging.

TROSPIMUM CHLORIDE:

- ◆ for treatment of vesical hyperactivity in persons for whom at least one of the antimuscarinic agents indicated in the regular section of the List is poorly tolerated, contraindicated or ineffective.

UROFOLLITROPIN:

- ◆ for women, as part of an ovarian stimulation protocol.

Authorizations are given for a maximum duration of one year.

- ◆ for women, as part of fertility preservation services for the purposes of fertility preservation aimed at ovarian stimulation or ovulation induction before any oncological chemotherapy treatment or radiotherapy treatment involving a serious risk of genetic mutation to the gametes or of permanent infertility, or before the complete removal of a person's ovaries for oncotherapy purposes.

Authorizations are granted for a maximum duration of one year.

USTEKINUMAB:

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis:
  - in the presence of a score greater than or equal to 15 on the Psoriasis Area and Severity Index (PASI) or of large plaques on the face, palms or soles or in the genital area;  
and
  - in the presence of a score greater than or equal to 15 on the Dermatology Quality of Life Index (DQLI) questionnaire;  
and
  - where a phototherapy treatment of 30 sessions or more during three months has not made it possible to optimally control the disease, unless the treatment is contraindicated, not tolerated or not accessible or where a treatment of 12 sessions or more during one month has not provided significant improvement in the lesions;  
and
  - where a treatment with two systemic agents, used concomitantly or not, each for at least three months, has not made it possible to optimally control the disease. Except in the case of serious intolerance or a serious contraindication, these two agents must be:

- methotrexate at a dose of 15 mg or more per week;
- or
- cyclosporine at a dose of 3 mg/kg or more per day;
- or
- acitretin at a dose of 25 mg or more per day.

The initial request is authorized for a maximum five months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least five points on the DQLI questionnaire compared to the base values;
- or
- a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pre-treatment assessment and a decrease of at least five points on the DQLI questionnaire compared to the base value.

Requests for continuation of treatment are authorized for a maximum of 12 months.

Authorizations for ustekinumab are given for a dose of 45 mg in weeks 0 and 4, then every 12 weeks. A dose of 90 mg may be authorized for persons whose body weight is greater than 100 kg.

◆ for treatment of moderate or severe psoriatic arthritis:

- where a treatment with an anti-TNF $\alpha$ s appearing in the list of medications for treatment of that disease under certain conditions are contraindicated. In this case, the requirements for granting a first authorization for ustekinumab are the same as those for the initiation of anti-TNF $\alpha$  treatments excluding infliximab, taking into consideration whether or not the psoriatic arthritis is of the rheumatoid type;
- or
- where treatment with an anti-TNF $\alpha$  appearing in the list of medications for treatment of that disease under certain conditions has not allowed for optimal control of the disease or was not tolerated. The anti-TNF $\alpha$  must have been used according to its recognized indications in the list for this pathology, taking into consideration whether or not the psoriatic arthritis is of the rheumatoid type.

The initial request is authorized for a maximum of seven months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease of at least 20% in the number of joints with active synovitis and one of the following four elements:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.2 in the HAQ score;
  - a return to work.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for ustekinumab are given for a dose of 45 mg in weeks 0 and 4, then every 12 weeks. A dose of 90 mg may be authorized for persons whose body weight is greater than 100 kg.

★ VALGANCICLOVIR HYDROCHLORIDE:

- ◆ for treatment of cytomegalovirus (CMV) retinitis in immunocompromised persons.
- ◆ for CMV-infection prophylaxis in D+R- persons having had a solid organ transplant and in D+R+ and D-R+ persons having had a lung transplant. The maximum duration of the authorization is 100 days.
- ◆ for CMV-infection prophylaxis in D+R-, D+R+ and D-R+ persons having had a solid organ transplant when receiving antilymphocyte antibodies. The maximum duration of each authorization is 100 days.
- ◆ for pre-emptive treatment (in the presence of documented CMV viral replication) of CMV infection in D+R-, D+R+ and D-R+ persons who have had a solid organ transplant. The maximum duration of the authorization is 100 days per episode.

VEDOLIZUMAB:

- ◆ for treatment of adults suffering from moderate to severe ulcerative colitis that is still active despite treatment with corticosteroids and immunosuppressors, unless there is a serious intolerance or a contraindication:
  - in the presence of a Mayo score of 6 to 12 points;
  - and
  - in the presence of an endoscopic subscore (Mayo score) of at least 2 points.

The initial request is authorized for a maximum period of four months.

When requesting continuation of treatment, the physician must provide information making it possible to establish the beneficial effects of the treatment, specifically:

- a decrease in the Mayo score of at least 3 points and of at least 30 %, or a decrease in the partial Mayo score of at least 2 points;
- and
- a rectal bleeding subscore (Mayo score) of 0 or 1 point, or a decrease of this score of at least 1 point.

Requests for continuation of treatment are authorized for a maximum period of 12 months.

Authorizations for vedolizumab are given for a maximum of 300 mg on weeks 0, 2 and 6, then every eight weeks.

- ◆ for treatment of adults suffering from moderate or severe intestinal Crohn's disease that is still active despite a treatment with corticosteroids and immunosuppressors, unless there is a contraindication or a major intolerance to corticosteroids. An immunosuppressor must have been tried for at least eight weeks.

Upon the initial request, the physician must indicate the immunosuppressor used and the duration of treatment.

The initial authorization is given for a duration of three months and includes a maximum of three doses of 300 mg administered on weeks 0, 2 and 6.

Upon subsequent requests, the physician must provide evidence of a beneficial clinical effect. The request will then be authorized for 300 mg every eight weeks for a maximum duration of 12 months.

- ◆ for treatment of adults suffering from moderate or severe intestinal Crohn's disease that is still active despite a treatment with corticosteroids, unless there is a significant intolerance or a contraindication to corticosteroids, where immunosuppressors are contraindicated or not tolerated, or where they have been ineffective in the past during a similar episode after a treatment combined with corticosteroids.

Upon the initial request, the physician must indicate the nature of the contraindication or intolerance, as well as the immunosuppressor used.

The initial authorization is given for a duration of three months and includes a maximum of three doses of 300 mg administered on weeks 0, 2 and 6.

Upon subsequent requests, the physician must provide evidence of a beneficial clinical effect. The request will then be authorized for 300 mg every eight weeks for a maximum duration of 12 months.

#### VEMURAFENIB:

- ◆ in association with cobimetinib, for first-line or second-line treatment following a failure with chemotherapy or with immunotherapy targeting the PD-1 or the CTLA-4, of an inoperable or metastatic melanoma with a BRAF V600 mutation, in persons whose ECOG performance status is 0 or 1.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging or based on physical examination.

It must be noted that vemurafenib, in association with cobimetinib, is not authorized following the failure of a treatment associating a BRAF inhibitor and a MEK inhibitor if it was administered to treat a melanoma.

- ◆ as monotherapy for treatment of unresectable or metastatic melanoma with a BRAF V600 mutation, in persons whose ECOG performance status is 0 or 1:
  - who have a contraindication or a serious intolerance to dabrafenib;
  - or
  - who have a BRAF V600K mutation.

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression, confirmed by imaging or based on a physical examination.

Vemurafenib remains covered by the basic prescription drug insurance plan for those insured persons having used this drug in the three months before 2 June 2014, insofar as the physician provides evidence of a beneficial effect by the absence of disease progression.

#### VENETOCLAX :

- ◆ as monotherapy, for continuation of treatment of chronic lymphocytic leukemia in persons whose disease has not progressed during a treatment of six cycles combining venetoclax and rituximab.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

The first two authorizations are given for a maximum duration of seven cycles and the last one for six cycles, for a total of 20 cycles.

#### VERTEPORFIN:

- ◆ for treatment of age-related macular degeneration with neovascularization in persons where 50% or more of the macular area is affected.
- ◆ for treatment of pathological myopia with neovascularization.

- ◆ for treatment of presumed ocular histoplasmosis syndrome with neovascularisation.

#### VILANTEROL TRIFENATATE / FLUTICASONE FUROATE, 25 mcg – 100 mcg:

- ◆ for maintenance treatment of moderate or severe chronic obstructive pulmonary disease (COPD) in persons:
  - who have shown at least two exacerbations of the symptoms of the disease in the last year, despite regular use through inhalation of two long-acting bronchodilators in association. Exacerbation is understood as a sustained and repeated aggravation of the symptoms requiring intensified pharmacological treatment, for instance, the addition of oral corticosteroids, a precipitated medical visit or a hospitalization;
  - or
  - who have shown at least one exacerbation of the symptoms of the disease in the last year that required hospitalization, despite regular use through inhalation of two long-acting bronchodilators in association;
  - or
  - whose disease is associated with an asthmatic component, demonstrated by factors defined by a history of asthma or atopy during childhood, by high blood eosinophilia or by an improvement in the FEV1 after bronchodilators of at least 12% and 200 ml.

The initial authorization is for a maximum duration of 12 months.

For a subsequent request, for persons having obtained the treatment due to exacerbations, authorization may be granted if the physician considers that the expected benefits outweigh the risks incurred. For persons having obtained the treatment due to an asthmatic component, the physician will have to provide proof of an improvement of the disease symptoms.

Authorizations are given for a maximum daily dose of 100 mcg of fluticasone furoate.

It must be noted that this association (long-acting  $\beta_2$  agonist and inhaled corticosteroid) must not be used concomitantly with a long-acting  $\beta_2$  agonist alone or with an association of a long-acting  $\beta_2$  agonist and a long-acting antimuscarinic.

- ◆ for treatment of asthma and other reversible obstructive diseases of the respiratory tract, in persons whose control of the disease is insufficient despite the use of an inhaled corticosteroid.

#### VILANTEROL TRIFENATATE / FLUTICASONE FUROATE, 25 mcg – 200 mcg:

- ◆ for treatment of asthma and other reversible obstructive diseases of the respiratory tract, in persons whose control of the disease is insufficient despite the use of an inhaled corticosteroid.

#### VILANTEROL TRIFENATATE / UMECLIDINIUM BROMIDE:

- ◆ for maintenance treatment of persons suffering from chronic obstructive pulmonary disease (COPD) for whom using a long-acting bronchodilator for at least 3 months has not allowed for adequate control of the symptoms of the disease.

The initial authorization is given for a maximum duration of 6 months. For a subsequent request, the physician will have to provide proof of a beneficial clinical effect.

It must be noted that this association (long-acting  $\beta_2$  agonist and long-acting antimuscarinic) must not be used concomitantly with a long-acting bronchodilator (long-acting  $\beta_2$  agonist or long-acting antimuscarinic) alone or in association with an inhaled corticosteroid.

#### VILANTEROL TRIFENATATE / UMECLIDINIUM BROMIDE/ FLUTICASONE FUROATE:

- ◆ for maintenance treatment of moderate or severe chronic obstructive pulmonary disease (COPD) in persons:
  - who have shown at least two exacerbations of the symptoms of the disease in the last year, despite regular use through inhalation of two long-acting bronchodilators in association. Exacerbation is understood as a sustained and repeated aggravation of the symptoms requiring intensified pharmacological treatment, for instance, the addition of oral corticosteroids, a precipitated medical visit or a hospitalization;
  - or

- who have shown at least one exacerbation of the symptoms of the disease in the last year that required hospitalization, despite regular use through inhalation of two long-acting bronchodilators in association;  
or
- whose disease is associated with an asthmatic component, demonstrated by factors defined by a history of asthma or atopy during childhood, by a high blood eosinophilia or by an improvement in the FEV1 after bronchodilators of at least 12% and 200 ml and whose symptoms are not well-controlled with an association of a long-acting  $\beta_2$  agonist and an inhaled corticosteroid;  
or
- who have already been receiving a long-acting  $\beta_2$  agonist, a long-acting antimuscarinic as well as an inhaled corticosteroid for one year or less.

The initial authorization is for a maximum duration of 12 months.

For a subsequent request, the physician will have to provide proof of an improvement of the disease symptoms.

Authorizations are given for a maximum daily dose of 100 mcg of fluticasone furoate.

It must be noted that this association must not be used concomitantly with a long-acting  $\beta_2$  agonist, a long-acting antimuscarinic or an inhaled corticosteroid, alone or in association.

- ◆ for maintenance treatment of moderate or severe chronic obstructive pulmonary disease (COPD) in persons who are already receiving a long-acting  $\beta_2$  agonist, a long-acting antimuscarinic as well as an inhaled corticosteroid for more than one year.

Authorizations are given for a maximum daily dose of 100 mcg of fluticasone furoate.

It must be noted that this association must not be used concomitantly with a long-acting  $\beta_2$  agonist, a long-acting antimuscarinic or an inhaled corticosteroid, alone or in association.

#### VISMODEGIB:

- ◆ for treatment of locally advanced or metastatic basal cell carcinoma in persons who are not eligible for surgery or radiotherapy and whose ECOG performance status is  $\leq 2$ .

The maximum duration of each authorization is four months.

When requesting continuation of treatment, the physician must provide evidence of a beneficial clinical effect by the absence of disease progression.

#### ★ VORICONAZOLE:

- ◆ for treatment of invasive aspergillosis.
- ◆ for treatment of candidemia in non-neutropenic persons for whom fluconazole and an amphotericin B formulation have failed, are not tolerated or are contraindicated.

#### ZOLEDRONIC ACID, I.V. Perf. Sol. 4 mg/5 mL:

- ◆ for treatment of hypercalcemia of tumoral origin.
- ◆ for prevention of bone events in persons having a solid tumour with at least one bone metastasis, or multiple myeloma with bone lesions.

Notwithstanding the payment indications set out above, zoledronic acid is covered by the basic prescription drug insurance plan for insured persons who used this drug during the 12-month period preceding 28 April 2004.

Persons referred to in the preceding paragraph who are insured by the Régie de l'assurance maladie du Québec are not required to submit the form entitled "Demande d'autorisation – médicament d'exception". The Régie de l'assurance maladie du Québec will cover the cost of this drug without other formalities, if it had already done so during the above-mentioned period.

ZOLEDRONIC ACID, I.V. Perf. Sol. 5 mg/100 mL:

- ◆ for treatment of Paget's disease.
- ◆ for treatment of postmenopausal osteoporosis in women who cannot receive an oral bisphosphonate because of serious intolerance or a contraindication.

|---------------------------|----------|------------|---|------------------|--|--|

- ◆ for treatment of persons suffering from moderate or severe intestinal Crohn's disease, on condition that the physician provide evidence of a beneficial clinical effect. The maximum duration of each authorization is 12 months.
- ◆ for treatment of moderate or severe rheumatoid arthritis, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically, a decrease of at least 20% in the number of joints with active synovitis and one of the following:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

The maximum duration of each authorization for continuation of treatment is 12 months at 3 mg/kg, with the possibility of increasing the dose to 5 mg/kg after 3 doses or on the 14th week.

- ◆ for treatment of persons suffering from moderate or severe ankylosing spondylitis, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically:
  - a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;
  - or
  - a decrease of 1.5 points or 43% on the BASFI scale;
  - or
  - a return to work.

The maximum duration of each authorization for continuation of treatment is 12 months at a maximum of 5 mg/kg every 6 to 8 weeks.

- ◆ for treatment of moderate or severe psoriatic arthritis of the rheumatoid type, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically, a decrease of at least 20% in the number of joints with active synovitis and one of the following:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

The maximum duration of each authorization for continuation of treatment is 12 months at a maximum of 5 mg/kg every 6 to 8 weeks.

- ♦ for treatment of moderate or severe psoriatic arthritis of a type other than rheumatoid, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically, a decrease of at least 20% in the number of joints with active synovitis and one of the following:

- a decrease of 20% or more in the C-reactive protein level;
- a decrease of 20% or more in the sedimentation rate;
- a decrease of 0.20 in the HAQ score;
- a return to work.

The maximum duration of each authorization for continuation of treatment is 12 months at a maximum of 5 mg/kg every 6 to 8 weeks.

- ♦ for treatment of persons suffering from a severe form of chronic plaque psoriasis, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically:

- an improvement of at least 75% in the PASI score compared to the base value;
- or
- an improvement of at least 50% in the PASI score and a decrease of at least 5 points on the DQLI questionnaire compared to the base values;
- or
- a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pretreatment assessment and a decrease of at least 5 points on the DQLI questionnaire compared to the base value.

The maximum duration of each authorization for continuation of treatment is 12 months at a maximum of 5 mg/kg every 8 weeks.

#### ETANERCEPT:

- ♦ for treatment of moderate or severe rheumatoid arthritis, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically, a decrease of at least 20% in the number of joints with active synovitis and one of the following:

- a decrease of 20% or more in the C-reactive protein level;
- a decrease of 20% or more in the sedimentation rate;
- a decrease of 0.20 in the HAQ score;
- a return to work.

The maximum duration of each authorization for continuation of treatment is 12 months at 50 mg per week.

- ♦ for treatment of persons suffering from moderate or severe ankylosing spondylitis, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically:

- a decrease of 2.2 points or 50% on the BASDAI scale, compared with the pre-treatment score;
- or
- a decrease of 1.5 points or 43% on the BASFI scale;
- or
- a return to work.

The maximum duration of each authorization for continuation of treatment is 12 months at 50 mg per week.

- ◆ for treatment of moderate or severe juvenile idiopathic arthritis (juvenile rheumatoid arthritis and juvenile chronic arthritis) of the polyarticular or systemic type, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically, a decrease of at least 20% in the number of joints with active synovitis and one of the following:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - an decrease of 0.13 in the Childhood Health Assessment Questionnaire (CHAQ) score or a return to school;
  - an improvement of at least 20% in the physician's overall assessment (visual analogue scale);
  - an improvement of at least 20% in the person's or parent's overall assessment (visual analogue scale);
  - a decrease of 20% or more in the number of joints with limited movement.

The maximum duration of each authorization for continuation of treatment is 12 months at 0.8 mg/kg (maximum dose of 50 mg) per week.

- ◆ for treatment of moderate or severe psoriatic arthritis of the rheumatoid type, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically, a decrease of at least 20% in the number of joints with active synovitis and one of the following
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

The maximum duration of each authorization for continuation of treatment is 12 months at 50 mg per week.

- ◆ for treatment of moderate or severe psoriatic arthritis of a type other than rheumatoid, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically, a decrease of at least 20% in the number of joints with active synovitis and one of the following:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;a return to work.

The maximum duration of each authorization for continuation of treatment is 12 months at 50 mg per week.

- ◆ for treatment of persons suffering from a severe form of chronic plaque psoriasis, on condition that the physician provide information demonstrating the beneficial effects of the treatment, specifically:
  - an improvement of at least 75% in the PASI score compared to the base value;
  - or
  - an improvement of at least 50% in the PASI score and a decrease of at least 5 points on the DQLI questionnaire compared to the base values;
  - or
  - a significant improvement in lesions on the face, palms or soles or in the genital area compared to the pretreatment assessment and a decrease of at least 5 points on the DQLI questionnaire compared to the base value.

The maximum duration of each authorization for continuation of treatment is 12 months at 50 mg, twice per week.

GLARGINE INSULIN (100 U/mL (3 mL)):

Sol. Inj. S.C

100 U/mL (3 mL)

|----------|----------|-------|----|---------|----------|--|

- ♦ for treatment of persons undergoing cycles of moderately or highly myelosuppressive chemotherapy ( $\geq 40$  percent risk of febrile neutropenia).
- ♦ for treatment of persons at risk of developing severe neutropenia during chemotherapy.
- ♦ in subsequent cycles of chemotherapy, for treatment of persons having suffered from severe neutropenia (neutrophil count below  $0.5 \times 10^9/L$ ) during the first cycles of chemotherapy and for whom a reduction in the antineoplastic dose is inappropriate.

## APPENDIX IV.1

- ◆ in subsequent cycles of curative chemotherapy, for treatment of persons having suffered from neutropenia (neutrophil count below  $1.5 \times 10^9/L$ ) during the first cycles of chemotherapy and for whom a reduction in the dose or a delay in the chemotherapy administration plan is unacceptable.
- ◆ during chemotherapy undergone by children suffering from solid tumours.
- ◆ for treatment of persons suffering from severe medullary aplasia (neutrophil count below  $0.5 \times 10^9/L$ ) and awaiting curative treatment by means of a bone marrow transplant or with antithymocyte serum.
- ◆ for treatment of persons suffering from chronic congenital, hereditary, idiopathic or cyclic neutropenia whose neutrophil count is below  $0.5 \times 10^9/L$ .
- ◆ for treatment of HIV-infected persons suffering from severe neutropenia (neutrophil count below  $0.5 \times 10^9/L$ ).
- ◆ to stimulate bone marrow in the recipient toward an autograft.
- ◆ as an adjunctive treatment for acute myeloid leukemia.

### RITUXIMAB (RITUXAN):

I.V. Perf. Sol.

10 mg/mL

|          |         |       |       |         |  |  |
|----------|---------|-------|-------|---------|--|--|
| 02241927 | Rituxan | Roche | 10 mL | 453.10  |  |  |
|          |         |       | 50 mL | 2265.50 |  |  |

- ◆ for treatment of moderate or severe rheumatoid arthritis, in association with methotrexate, or with leflunomide in the case of an intolerance or a contraindication to methotrexate, on condition that the physician provide information demonstrating a response to the treatment, observed in the first six months following the last perfusion. A treatment response is defined by a decrease of at least 20% in the number of joints with active synovitis and one of the following:
  - a decrease of 20% or more in the C-reactive protein level;
  - a decrease of 20% or more in the sedimentation rate;
  - a decrease of 0.20 in the HAQ score;
  - a return to work.

Administering the subsequent treatment is possible if the disease is still not in remission or if, following the attainment of a remission, the disease is reactivated.

The duration of each authorization for continuation of treatment is a minimum period of 12 months, for a maximum of two treatments.

A treatment comprises 2 perfusions of rituximab of 1 000 mg each.

# APPENDIX IV.2

## DRUGS REMOVED FROM THE LIST OF MEDICATIONS BUT WHOSE INSURANCE COVERAGE IS MAINTAINED FOR PERSONS UNDERGOING A PHARMACOLOGICAL TREATMENT AT THE TIME OF THE REMOVAL

1 The duration of reimbursements for stop-smoking treatments with various nicotine preparations is limited to 12 consecutive weeks per 12-month period. In addition, the total quantity of chewing gum or lozenges for which the cost is reimbursable during the 12 weeks is limited to 840 units, all forms combined.

7 The duration of reimbursements for varenicline stop-smoking treatments is initially limited to a total of 12 consecutive weeks per 12-month period. A 12-week extension will be authorized for persons having stopped smoking on the 12th week. The duration of reimbursements is then limited to a total of 24 consecutive weeks per 12 month period.

- 12 A strip is reimbursable where it is used to measure the international normalized ratio (INR) in persons for whom a community-based pharmacist has taken charge of adjusting the dose of a vitamin K antagonist in order to attain therapeutic targets. In addition, one strip per day is reimbursable per person.
